I got interested in ham radio because of a neighbor we had when I was 10 or 11. He took me and his son, my age, to Field Day one year. There was all this old surplus stuff with mysterious dials and knobs. Even the commercial stuff looked neat. You could tell a Hallicrafters from a Hammarlund at 100 feet (well, in those days I could!). The R8 I have now blends in perfectly with all the audio gear in the cabinet, and you can't tell a Yaesu from an Icom from a Kenwood unless you walk right up to it. Digital readout and computer control means you can pop right on to a frequency--no skill involved at all. Computer games and hacking seem to be the challenges now. Building radios that will never compare with even cheap commercial stuff just isn't attractive. Way back when, commercial gear was priced out of reach of many of us, and even if it weren't you could still match the performance with homemade stuff if you worked at it. I got my start fixing 25-cent console radios obtained from the Salvation Army, and tearing apart discarded TVs. That avenue of progression is nearly closed now.

Yes, I think we are dinosaurs!

73,

Jim

Would that really surprise you? After all, building a one-tube
regenerative receiver is merely a regurgitation of something that
was done hundreds or thousands of times back in the 30s ...
and the result will be a vastly inferior receiver to what one
could easily build with as few as one, to perhaps a few,
modern ICs ... and it would likely radiate like crazy.

I don't find any "magic" in that ...

I can't for the life of me understand why anyone would
be attracted to waste the time in such an endeavour when
there are so many more useful, more interesting things
well within reach.

With all due repect, it would seem so ... do you really expect the youngsters of today, with all of their exposure to computers, the internet, cellphones, and all sorts of other sophisticated consumer electronics devices to actually be interested in recreating antiquated
stuff that the real world abandoned decades ago???

Now don't get me wrong, if YOU want to build stuff like that, that's fine with me ... but I think it's ridiculous to bemoan the fact that today's youth aren't interested in nostalgia radio when there are so many more useful and interesting things they could be doing with radio.

Well...with further due respect I will point out that the thing that
got my 16-yr old out of his chair in front of the computer last night where
he had been 'glued' for the past several hours was the sound of CW coming
out of the TV set in the living room. No, it wasn't my ladder-line
re-radiating again ;-)...I had just put in a copy of the ZL9CI video that
9V1YC had been kind enough to send me into the VCR and he and I wound up
sitting down together and enjoyed watching an hour showing a dedicated group
of ops doing "stuff that the real world abandoned decades ago". Yes...the
metero sta. on Campbell is all automated now and all the data is up-linked
on each sat pass by computer, but there was something compelling enough to
attract a teenagers attention in what would motivate a dozen ops to endure a
long boat ride to a sub-Antarctic island and spend a month banging out QSO's
to ten's of thousand of people around the globe.
If you're the Last Dinasour...you've got some company ;-)

I've seen one or two articles where people coupled a string of IF transformers together and plugged them in where the mechanical filter would go. I'm not sure if it would give the desired selectivity or end up being wider.

One might try a ceramic filter, if you can get one of the desired bandwidth. They are good enough for a lot of radios nowadays, and they probably would have better skirt selectivity than a string of IF transformers. Maybe cascading two or three ceramic filters would even give better performance (increasing the skirt selectivity) thought that would be experimental and perhaps losses would be more than desired.

Aw, bingo! What can you do to "modernize" amateur radio that would
bring youngsters back into the hobby? Is "no-code" really the answer?
Unfortunately, from a strictly communications standpoint, whatever is
being done today with "modern" equipment was being done in the
40s and 50s with antiquated equipment. If the "magic" or radio is so
easily replaced by USING satellites, cellphones and computers, I see no
hope for the youth of America in becoming interested in modern electronics,
or ham radio, let alone "antiquated" technologies. Having a 16 year old
who is more interested in downloading .wav files, games, etc. than learning
how the computer works or how to program it, I do worry.

Regards

Pete K1ZJH

I wonder how many of these modern, enlightened youngsters have built a
computer,
a modem, a cell phone, etc. from scratch?

We "dinosaurs" built our radios, and experienced something in using
them that these "modern" kids never will (sadly).

It's like thinking you're some technical genius because you know how
to use a telephone.

I'll go with Marc on this one, it does make me wonder about the interests of youth today. I'm only 37 but I can remember the days of sitting and looking at *old* copies of Popular Mechanics and dreaming of all the neat stuff you could build. Boats, sleds, cottages, TV consoles, Teeder Todders etc. It used to drive me crazy because my dad was not a builder and we also didn't have the money for young Tim to throw away on some silly project. Arrrrgh. Of course now I've got the money, just need to find the time. :)

I've mentioned building several projects with my kids, I turned over the Dremel Jigsaw to them, no interest. They've built a few birdhouse kits but only at Dads urging. At 8 years old I was using the same Dremel Jigsaw, I found a book of plans for bookshelves, shadowboxes, birdhouses, you name it. I think I made everything in the book. That saw ran all summer long.

While Amateur radio, and specifically building amateur gear may be in decline I don't think radio is all alone, I think in general the youth of today are in a different mode and really don't have the interest of hands on as the older crowd may have.

I agree with John, K6QQ in particular. It is a point well taken
that it isn't necessarily the "vintage" of the "hands on" project that
really counts, it is actually encouraging the young to participate in
any project that will enrich a storehouse of practical knowledge for
them. I am 50. I don't consider myself a homebrewer at all. However,
when I was 12 and a novice operator I did build a few Heathkits and
prior to that some simple breadboard projects. I do occassionally get
into an old rig such as my Viking II or KWS-1 to do maintenance and
minor repairs with an Elmer (even at my age). I have put together QRP
kits such as the NC 20 and found this to enrich a fabulous hobby, that I
will participate in to the end. I use the latest technologies too. The
analogy when referring to the youg would of couse be computers and ultra
solid state.
I drive a very high tech european import and at the same time get greasy
working on a vintage car. In radio, those who have knowlege and use of
the latest electronics will eventually investigate where it all came
from.
Bottom line...Don't dwell on the era, just continue to encourage hands
on activities that will enable generations now and to come, to move into
the future while embracing the rich past.
Thanks for the bandwidth,
Jack W6ABC

Again, that just about nails it.

Think of the PCS cellular telephone I now use exclusively instead of a landline. My father probably took his share of telephones apart in his youth, and in doing so he would have gained enough knowledge to exhaustively understand the technology in the course of a weekend or two, perhaps with the aid of one or two elementary electronics books written for laymen. The most complex, abstract part of a telephone 30 years ago was its hybrid network. And once you understand what a transformer does, you're 90% of the way to understanding a hybrid.

Now, suppose I were to take apart my Qualcomm PCS phone in an attempt to learn how it work(ed). Contemplating its "guts" spread all over the workbench, I might as well be looking at the remnants of the Roswell alien autopsy. There is nothing to be learned from such a sterile experience, unless I already have a thorough understanding of what I'm looking at. There are few if any parts I can cannibalize from the corpse to tinker with or use in another project. I might spend a whole month studying a monolithic phase-locked VCO chip -- even probing it with a VOM, oscilloscope, or, hell, a vector network analyzer. But that won't tell me how the phone as a whole works -- only one small part of it. By the time an inquisitive kid figures out anything meaningful about the way a telephone works nowadays, it'll be obsolete anyway! (Which is obvious to anyone sentient enough to use the phone in the first place.) Much the same, I think, is true of modern communications

systems ("radios").

> I'm a lot more interested in seeing young people just get engaged in

Indeed. It would be a sad way of repaying the giants on whose shoulders we now stand, if we were all content to follow in their footsteps instead!

The key point is, hacking code on my old 48K Apple][+ was just as important (and, dare I say, romantic?) a formative experience for me as taking apart phones and building radios was for my father. I also spent plenty of time as a kid building and playing with tube (and transistor, and IC) radios, but in retrospect it's a damned good thing I didn't stick with that particular path in life. For many practitioners, even the once-creative art of electrical engineering has become little more than a competitive cost-reduction game these days. An EE's job still demands creativity -- arguably more than ever, in fact -- but it also pretty much rules out most opportunities to stand back and appreciate the technology for its own sake. For all but a few lucky engineers, modern electronics as a career seems to be just another high-stress numbers game.

> My final thought on this matter is that the tube radio technology is
> not sufficiently out of modern memory to be considered all that

> glass tubes. Rather, he relied on parts supplied by others, and these
> days whose to blame somebody for relying on resistors rather than
> tubes, or even whole radios rather than breadboards?
>
> ss.

Right on. That's exactly what continues to make electronics interesting as a hobby (if not a career) from my point of view. All of that integration puts an awe-inspiring amount of power in the hands of people who take the time to understand how to wield it. Using a recent pet project of mine as an example, I couldn't have built a 10-megabit microwave link out of tubes. Or even discrete transistors, without a lot more effort than I would have ever wanted to put into it. There has never been a better time for a hobbyist to partake of the fruits of technological innovation -- even if you have to do it for a living, too. :-)

That being said, building HF gear out of tubes is a different matter entirely. That might be a perfectly reasonable hobby, just like playing with model trains or reproducing the Eiffel tower from matchsticks. But

you can't confuse it with what we now call "radio" or "electronics." It also seems safe to predict that 500 years from now, when it's time for the "resurgence of interest" you speak of, it won't be possible to hear anything but atmospheric static on a homebrew vacuum-tube radio.

SMT (surface mount technology) isn't any harder to work
with than through-hole parts ... it just takes different tools
(not a fortune in them, either) and different techniques.

In fact, it's a LOT easier to remove a multi-lead SMT
device from the board and replace it without damaging
the board than it is to do the same with a through-hole
part.

I don't understand the part about making PCBs being
harder ... could you elaborate on that one?

2678. FS: Heath SB200 Linear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-28 00:00:00 UTC
From: Ron Eisenbrey <ab5wg@vonl.com>
Message-ID: <XVZx3.24437$gO1.914554@news2.giganews.com>
Source record: 79843

Heath SB200 Linear for sale. About a 9.5 out of 10. Slight scratch on front edge of top cover. Cetron finals. Has soft key, soft start mods installed. New HV capacitor bank and nichrome parasitic suppressers. Very clean and ready to put on the air. Have photograph if anyone wants to see the file, .jpeg format. $350.

Thanks,

Ron AB5WG

Ed,

I disagree, in the "good old days", Electrical Engineering and Power
Engineering were basically the same thing. EE was never basically the
same thing as Radio Engineering. EE went straight from Power Engineering,
through a short period without a definite identity, to Computer
Engineering.

Perhaps in the traditional sense. However, aren't cell phones, pcs, wireless modems, and satellite links all "radio"? Who's designing all the new hi-tech communications systems that are showing up on the market?

Guy's in their forties, like myself. But your point is well taken, there
is a great demand for electrical engineers that design radios, filters,
and amplifiers. I shifted from low noise-low frequency audio design
to microwave filter design six years ago within my same company.
Fortunately, my company recognized the learning curve, and now
I have a niche position.
It may take 2 or 3 years for a new graduate to
become proficient with radio design, and top communications companies
are aware of that and provide mentors and training.

Dear SS, and the rest of this thread,
Pete you certainly got the responses out of the woodwork. Thanks for asking the question. And for the excellent discussion points.

I would comment however to "SS" that he might want to check out www.tentec.com and their kits, they produced a 1253 which was intended as a starter radio and originally sold for $24.00, I see that the current price for the "improved" version is $59.00 but it would provide an excellent way to experience the "regenerative days of old" which had the sensitivity of modern equipment, but with simpler circuitry. As I see it the tradeoff being that the digital radio of today does not require the jockeying back and forth between controls to peak the circuitry to hear the weak stations.

To add heresy to this thread, I'll offer my "radical" thoughts. As a 65 year old grandpa, I am attempting to create a kit of parts that my grandchildren (ages 9, 8, and 5) might read and build with. It will build a crystal set, complete with galena crystal and mount, plus a 1N34 for when finding the hot spot gets too problematical. And, it will build a regenerative receiver with a J-FET and amplifier module that I will supply.

My intent for this kit is to see if there is any interest - inquisitiveness into the electronics / sciences field. I figure that the one thing that I have to pass on to the following generations is the curiosity of what makes things tick, and how to go about finding out the answers. I also have a single 201A regenerative receiver that I plan to use as a "show and tell" piece to demonstrate how the "old timers" did things.

I realized the need to try and spark this quest for information when I had made a casual comment with some fellow worker, on wondering how plastic interlinking chain must be manufactured. While he didn't have a clue, he made the comment that "only you would ask that question". And, I saw that many people do take modern technology on faith, and have NO CLUE as to what marvel they are working with. Stop and think about the automatic transmission in automobiles -- a mechanical computer; who among this group knows the details of the algorithms involved in making shift decisions, of more to the point -- cares??? We just get into the cars and put it into drive and go.

Sorry that I get so long winded, but it's hard to get off the soap box when I get wound up. Thanks again Pete.

Regards,
Denis

If you're going to Shelby or any other hamfest:

I'm a serious collector of WW-II aircraft radios.
I pay and trade well for rare or unusual
"ARC-5" type Command Set radios and accessories.
Types for which I'm looking include:

Any transmitter, receiver, rack, modulator,
control box etc. marked *BOTH*
"Aircraft Radio Corp." *AND* "SIGNAL CORPS U.S. ARMY"

BC-942 Receiver in unmodified condition.
This receiver, made by Western Electric, looks just like the
common AN/ARC-5 R-28 VHF receiver but has a Signal Corps U.S. Army
nomenclature plate showing BC-942.
Western Electric BC-699 transmitter (looks like a T-23).
AN/ARC-5 R-112 Receiver
AN/ARC-5 R-113 Receiver
AN/ARC-5 T-89 Transmitter
AN/ARC-5 T-90 Transmitter
Any radio, rack, part, dynamotor or accessory marked
for set RAT, RAT-1 or RAV in any condition.
BC-455 with English Lorenz modification for 28-41 MC.
Any AN/ARC-5 unit with "X" appended
to its nomenclature (i.e. AN/ARC-5 R-26X)
Crystal Frequency Meter O-4/ARC-5.
Any unit factory-marked in Cyrillic.

Anything else odd or unusual in this line is
always of interest.

SMT parts use fine enough lead spacing that you pretty much have to use photographic methods to make boards that use them, it seems to me.

I've made a number of PC boards for through-hole parts by directly drawing on the copper with a resist pen. I've done others by covering the board with adhesive packing tape, then slitting it with a knife and peeling off the tape wherever I wanted the copper etched away. I've seen someone describe a technique that involves cutting the copper directly with a Dremel tool and abrasive wheel. All of these are practical for boards that use 0.1 inch spacing through-hole parts, with no traces between pins.

But once you need to run traces between pins at 0.1 inch pitch, or start working with chips that have 0.05 inch lead spacing, these methods seem unlikely to produce working boards very often.

So, you need a more precise technique, and these generally involve photosensitive PC boards and exposure frames and deveoper, or a computer and a laser printer, or both. If you don't already have any of that equipment, it seems like a lot of additional hardware and technique just to make use of one surface-mount part.

Hello,

I have a heathkit hw-16 and Hg-10b vfo for sale or trade.
Both units are in good shape and work well. I have made several
contacts on the set. The hw-16 is a 7 out of 10 has some age on the
case. The face of it looks good all knobs and sockets,switches, meters
are working and look good. I would like to get $100+shipping out of the
set or trade for a 10 meter rig with cw. TNX for looking.

Ok peter, Had a SR-160 (Tri-bander) and still have an SR-400 Cyclone... so I'll try to help...

First - check all the tubes on a tube checker... (duuuuh - but had to say it!)

Second - slightly wiggle the power supply connector/cable in back of the radio. Audio as well as power comes through it and sometimes corrosion on pins will weaken audio levels. If the audio level should suddenly "pops up" then you found it.

Lastly, - the AGC and ALC circuits in these rigs are tied together. First - mark your ALC/AGC pot using a marker or XYL's nail polish. Then with the rig on RX - carefully move the ALC/AGC pot 1/4 to 1/2 turn to the right - then return it back to where it was. Now move it 1/4 to 1/2 turn the other way. At one point, you will have MAX "S" movement and loudest background noise. Unfortuately, this is compromise with the ALC. You will have to now transmit and adj the ALC/AGC pot again. Best ALC will probably not occur on the exact same spot as the AGC on RX.

It will take some time, but you will soon find a spot on the pot where you are getting good ALC and enough AGC to drive the "S" meter properly. This point will be VERY narrow and reflects a compromise between the two functions.

If everything's working right - you should get enough RX audio with your volume control on the front panel set at the 9'o clock position. On TX - set your mic level so ALC meter kicks just occurs slightly on voice peaks.

That's the way these rigs where designed and, yes, you will probably have to do this once every 6-8 months as the tubes age.

You will also notice the "S" meter does not register on static blips or background noise - only on actual average voice levels and possibly strong lightning pips. Again, that's the way it was designed.

Where as, the "S" meter on Jap rigs are so sensitive, they seem to go over S-9 with every hiss or pop on the band... (which is why DX on 20 is ALWAYS 59 - hi).

Ol Bill Halley believed in providing highly accurate "S" meters capable of measuring actual SSB signals in all his rigs. The Japs gave people what they wanted. Lots of jumping needles, just like in the movies.

Well Hallicrafters is gone - Japs are still here - and now everyone has a 59 signal.

Who needs sunspots? - WD0HCO

Pete - let me know if you got it.

About those cars, there's something strange going on there. Cars must be
getting closer to the ground every year, cause it's getting harder and
harder for me to get underneath them.

Yes. I'm 45, and I've been building my own gear since before I got a license in
1967. I've had a few manufactured rigs, but always preferred to "roll my own".

Current main HF station is a three-band CW only transceiver made from junk
parts running 100 watts output. Antennas, transmatch, power supplies and even
the shack table are homebrew.

>or
>is the "magic" of building a one-tube regenerative receiver using a 30 or
>'99
>tube reserved just for those of us with AARP membership.

Nope. However, there's lots of forms of that "magic". Lots of hams are building
QRP rigs, while others specialize in legal-limit amplifiers. Antennas are a
whole subject in themselves.

> I am feeling
>kind of sad, because more than a few old timers have sent me the

There are lots of folks looking for that kind of stuff. The hard part is
connecting those who have it with those who want it. NGs like this are one way.
>
>I am wondering, are we really the
>

>Last American Dinosaurs
>
Nope. If anything, interest is increasing.

I started going to hamfests about 22 years ago. In those days you could get "hollow state" parts and rigs cheap - often for nothing. This happy state of affairs continued until about 8 to 10 years ago, when slowly but surely interest in older radio technology began to increase. Of course as time goes on, things which are no longer made become scarce, but what I see is a real surge in interest - from folks of all ages. Sure, some of it is nostalgia for the past, and some is wish-fulfillment from the past, but a lot of the interest is simply that folks find it to be fun.

FOR SALE: British SPY SET, MK 123.
The Mk. 123 set ,compact valved portable transmitter/receiver
of the 1960's. Covers 2.5 Mhz to 20 Mhz in three bands,
13to25watt o/p
rx fully tunable, with bfo, headphone o/p, tx is crystal
controlled,
built-in tuning neons and meter and key (external key can be
fitted),
dimensions length 29.9 cms, height 8.5 cms and width 13.6 cms
weights 3.5 Kg. in its canvas case 3.97 Kg. Loads of acc's come
with the set, mulit way plugs for various outlets, aerial wires,
tape measure type aerial reels, miniature voltmeter, mains
tester,
aerial eggs, full circuit details supplied.
Set in first class condition,fully working. Serious enquiries to
purchase this set only please.

Age here is 40 and I'm right now listening to the Old Military Radio
net on a homebrew regenerative receiver.

I think N2EY is right: there are more of us youngsters (;-o) involved
in the QRP area.

And while it is profoundly different from byuilding radios, there is
a huge corp of kids involved in a new variety of "homebrew" :
software development. There is a great book called "Hackers" by
Steven Levy. It is about the fanatical college students at who led
the computer software revolution. When I read the book I was struck
by the similarities between their devotion and enthusiasm and the
spirit that exisited among youthful radio builders in earlier decades.
So perhaps the spirit of invention lives on in other forms... But I
tried software and it is just not my thing. Back to the soldering
iron...

Interesting you mention it today; it's just in the past few weeks I started to getting into this idea, and tinkering a bit. I have learned so much repairing circuits, I figure building one will teach me even more. Plus I want to start making breadboard style radios that never existed for display purposes, as I think so many balloon tubes are just too nice to be hidden.

I'm 42, and I often feel like "The Kid" at swaps, then I go snowboarding and I am "The Old Man". No median is available :). I thought everybody WANTED it this way, Peter- it's the *OLD* Timer's Bulletin, after all. I won't get into a long tirade about this, people here know my views. I've heard a lot about how hard and with little thanks everyone toils to makes swaps possible, and that my criticisms are well intentioned but pointless. You can fight City Hall easier than AWA, evidently. Still, my hardest scheduling problem for my business (pool service) hasn't been any of my 40 customer's demands but figuring out how to go to Rochester for 6 hrs next week. This is a game for the retired, it seems clear.

How about an event specifically for kids at a swap/conference, with cool displays of breadboards and spark gaps- what kid could resist such a thing ? BUT- how many kids are going to come on a Weds or Thurs at 7 am ? It would have to be Sat at noon, or nothing. This would be a great way to teach electronics- Bardeen, Shockley and those guys where great, but transistors are BORING, awful, and dull compared to our glowing bottles. And kids NEED to learn about basic electronics today more than ever. The liability issues today, a opposed to the carefree 60's when I was making 12K Jacob's Ladders in the basement with bell wire and coat hangers, would make lower B+ voltage circuits essential, though.

Just a thought,
John H.

In very good condition, a bit dusty, best one I've seen in quite a few
years.
Would clean up to excellent. No dents, extra holes. One mod
is that one of the phone jacks has been replaced with a banana jack.
Easily reversible, since the hole wasn't modified. With the correct
(serial #'s match) calibration book. A few very minor paint chips on the
outside case. $49 plus shipping.
regards,
Chuck...K1KW

When I looked into getting a radio project "kit" like my uncle's old Heathkit I found out that Heath is out of that buisness. The only kit type receiver that I could find mention of, was the Ten-Tec 1254 mentioned in Passport. Paying $200 for a project that when completed has a reputation for being only "so-so" leads one to the natural q of why anybody would want one. Heck, it doesn't even have SSB and yet is said to take 24- 27 hours to complete to come up with something that is described as "no serious DX receiver". Yuk.

I don't mean to impune anybody else's hobby, but these days, for what amounts to a day's pay one can buy an off the shelf radio the size of a large paperback book that is technically superior to most anything the average basement tinkerer is likely to come up with in terms of ease of use and portability. As to putting together something with hard to find, delicate vacuum tubes, I just truly don't get it.

Homebrew radios, like homebrew computers are fast becoming anachronistic. Let's face it, those of us under 70 often have more disposable income than disposable time. I think that we all owe a debt of gratitude to those that sweated long hours coming up with solutions and configurations that are now standard, but the sun is setting on the sheer viability of the home built radio, computer or telescope.

repects,
ss.

Oh, I'm not so sure that building interest is totally dead. The internet (aka computers) has been a tremedous boost to the radio hobby. Now, for the first time, a relative newcomer has access to information that just wasn't available just a few years ago. More importantly, we have access to parts and old radios to restore and operate. I suspect that with more magazine articles like yours leading the way, that interest in vintage as well as modern electronics will build at all age levels. Besides, have you noticed the increase in kit manufacturer's lately; modern, yes, but 'building' none the less.

The vintage radio hobby is no different than vintage cars, guns, typewriters or whatever. It's fun to tinker with the past.

"John Moriarity" <k6qq@hdo.net> wrote:

>It's like thinking you're some technical genius because you know how
>to use a telephone.

I don't know about that. It's more like the amount of technology that is in daily use exceeds any individuals capacity to learn all of the fundamental nuances of each facet of all that we come in contact with daily. 30-40 years ago, an intellegent person really could pretty much keep up with changes in technology enough to become a jack-of-all trades and some knowledge of electronics, auto mechanics, refrigeration, biology, astronomy, mathematics, physics, chemistry, etc. was considered a standard for a well rounded individual. These days, technology advances so rapidly that keeping up with even just the important changes in any given field is just about a full time job in itself.

Who's to blame somebody for not really caring how a 30's vintage tube radio works, when just keeping up with necessary software upgrades is so time consuming? Today's focus is on the information, not the technology that brings the information. It's such a cliche' that few stop to think what it really means, but we're at a point where the technology age is giving way to the information age. The information about how to delvelop the technology to deliver the information, is just one small part of an ever complex spiral.

I'm a lot more interested in seeing young people just get engaged in learning _something_ that stimulates creativity and critical thinking than I am concerned whether or not they wish to laborously re-trace individual steps of those who've pioneered various technologies that are now taken for granted.

My final thought on this matter is that the tube radio technology is not sufficiently out of modern memory to be considered all that interesting. I note resurgences in interest of ancient processes, but those processes are usually more along the lines of truly old technologies that tie into self sufficientcy. It's not like the average tube builder ever personally made the filaments and blew the glass tubes. Rather, he relied on parts supplied by others, and these days whose to blame somebody for relying on resistors rather than tubes, or even whole radios rather than breadboards?

ss.

We builders are still here, at least in spirit.
I'm 42 and I still build things -when I can get the time!

That's the problem- time. Life is so rushed and harried now;
We all must work longer hours to have anywhere near the
buying power our parents had. I own two small businesses
and my wife works as a teacher's aide, and it's still
touch-n-go on the bills sometimes. The businesses eat
so much time that months can go by before I can heat
a soldering iron again. And keeping up with email?
I have 172 pieces in my inbox right now, at least
2/3rds of which will require a personal response.

tempus edax rerum!

That's one area where building kits has changed. With printed circuits and automated assembly techniques, production assembly is no longer so labor intensive. It is now often less expensive to assemble a rig than to write and print a manual to tell someone else how to do it. That is, at least in part, what put Heathkit out of business. For the most part you no longer build a kit to save money. You do it because you enjoy building, operating, and understanding a rig you put together yourself (even if it cost the same or more).

The people who do things the hard way are the people who had no choice.
In this modern age, things are not as hard and everything comes pre-made,
thus people don't have to build radio's from scratch anymore.
That is why old hams are the ones who build radios, because they had to.

> We all must work longer hours to have anywhere near the
> buying power our parents had.

Consider this- most antique radios today, in working condition, sell for the same price as when they were made. You can buy a radio that cost a year's wages in 1934 for a week's wages today. And you could buy the same function (i.e. a good sounding radio) for less than a day's wages.

Face it, we just want more from life. Look, I'm a pool guy- I just got back from my rounds of suburbia. And a lot of us have more toys than our parents ever dreamed of calling essential, IMHO, and more than we have time to play with (the irony of this seems to escape people).

John H.

Hi Peter,

I think people are still building things, even things using tubes, they just aren't building tube radios. If you want to see dozens of people building audio amplifiers with tubes, you have only to look in rec.audio.tubes. In the realm radios, if you look around you can find a lot of people building crystal sets. I suspect the attraction of crystal sets lies in their ease of construction and tweaking, which is a result of their simplicity. Tube radio building seems to be a less popular avocation than building crystal sets, or tube audio equipment. There still people still building electronic equipment from parts.

Regards,

John Byrns

This is a fascinating thread. I agree with a number of points that have already been made, and won't repeat them. I do have a couple of additional comments.

My website's project/restoration section includes instructions on how to build a crystal shortwave receiver. We get a steady trickle of mail from people who are building this radio, so I guess there is still some interest out there in exploring "old" technology.

If I fix and old radio or build a one-tube set from scratch, it's a nostalgic activity. But the old-timers were technically *progressive* in their time. It was a forward-looking activity to build a radio from scratch in the days when factory-made radios were just starting to appear. Radio was not "old-time" in the 1920s -- it was cutting-edge technology!

We're being a little hard on today's kids to condemn them for lack of interest in 70-year old technology. The old-timers building 1920s radios were exploring the technology of *their* day, not reviving 70-year old techniques in ginning cotton or whittling barn stools.

If the old-timers were alive and the same age in the 1990s, they would be exploring 1990s technology, and I tend to think it would be more along the lines of software than hardware.

The underlying hardware has become disposable, non-user-repairable, and thus not terribly interesting. My younger son is very mechanically inclined, and loves to gather old found junk or spare parts from my garage to fashion a "machine." Unfortunately, a lot of his raw materials -- a smashed cel phone he found on the street, innards of a solid-state CD player put out in the neighbor's trash, etc. -- contain no useful reusable parts. It's fun to pretend that a cel phone scotch-taped to a CD player lets you broadcast music to ET. But I daresay few people on earth could take the parts from those two items and make something new and useful from them.

Software -- programming your computer, creating a databasem building an interactive website, etc. -- is the layer where an average person can accomplish something interesting and fun nowadays. Maybe the year 2000 analogue of building your own regen receiver is building your own website!

Cheers.

Helllo D.S.

If you use your handy dandy multispline Bristol wrench to remove the knob
you will see why.
The shaft for the knob is just below the original shaft because of the
gear set. Otherwise the knob would probably have had to stand away from
the panel even further. The reason for the large skirt on the knob is to
cover up the added gear set.

Enjoy your A4!

.. Joe - KB9R

Good Evening folks!
Once again the Shelby, NC fest is almost upon us. And once again I'll
be making the long drive from Orlando up to Shelby for the fest. :-)

I'm always looking for National Coil-Catacomb radios and parts for my
personal collection and ongoing research.
If you have one to sell, bring it.
If you have one you just want to talk about, bring it too!
(I'll be happy to talk your ears off about it! :-)

I'll be wandering the fest from Thursday about noon to mid Saturday,
and would like to meet National owners by the dozens.... :-)
As usual, I'll be with/near the rest of the group from
boatanchors@theporch.com down in the infield area of the fair grounds.
(I'm the short one with the National cap! :)

I have one Clegg model "Venus" 6 meter ssb
transceiver in good working condition with
very good cosmo. Unit has matching power
supply/speaker, org. O.M. and spare finals.
The price is $225 or best offer plus shipping
ups gnd cod or prepaid money order. Please
email WA4USO@aol.com. The wt. is apprx.
50lbs boxed.

You seem to feel you have the authority to speak for everyone else?
Virtually everyone else in the current generation do not even know what
a tube or regen receiver is and they just might not find them as boring
as you seem to think.
According to you way of thinking we should close all the museums, after
all, way would anyone be interested in all that old stuff, just forget
the past, that is what most of the current generation wants to do
anyway. You think like them, which is "if I didn't have anything to do
with it, it isn't worth remembering."

What are you going to do in a few more years when through-hole
parts are no longer available? Industry is going to SMT. Soon
through-hole parts will be as scarce as octal tube sockets and
Nuvistors ... if you want to build, you're going to have to learn,
prepare, and adapt.
```

It isn't that hard, just different ... all it takes is some
self-education
and minimal equipment.

Phrases like "more useful", "more competent", "more relevant", "level
of performance", "spurious free", "level of quality" "inferior
design", and "dead technologies" conjure up images of the
hard-working engineer who's trying to compete, excel, get it right. I
work as an electronics professional, and I've see lots of these

people. They're usually tired all the time, one project away from getting it right, and one week away from burnout. Frankly, I felt tired after reading your narrative, not motivated.

I think seeing *beyond* technology is the key to discovery. Radio is magic, truely. All the techno-logical progress in the world can't hide it. Build a radio yourself, with you own two little paddy-paws, and the magic grabs you. Can we do it better? Sure! Do we have to, to experience its magic? Heck, no!

What about the smile that spreads across your face when you or your kiddo flip the switch and sound comes out of the speaker you wired up yourself, outta stuff you built from grampa's junk box? Magic. Or the warm feeling that wells up inside your chest when you tweak that regen control and the beat note suddenly appears out of a bunch of clicking hisses? Magic. Or the feeling of appreciation that comes over you when you see a production- hardened EE encouraging a youngster to complete his first radio kit? Magic. Or just the sense of satisfaction that you feel when you tweak a tuned circuit and have a (dare I mention it?) bipolar transitor IF amplifier spring to life? To me, that's FUN... [but as to being more relevant... nnnaaaahhh...]

34 years ago when I was a mere teeny-bopper, I remember being invited into a ham's "shack". It was full of big gray and black boxes, some shiny and new, some obsolete WWII surplus. It was quite impressive. On the kitchen table, there was a 2x2 foot square of masonite, with four or five tubes mounted on top, and coils wound on toilet-paper rolls. When I asked about it, his face lit up. He reached in and connected a wire with an alligator clip, and the tubes turned orange, and in a few seconds there were sounds of morse code and quacky voices. State of the art? I don't think so. Magic! You bet!

Now, I don't have a bunch of letters past my name (I'll offer just the 4 the FCC granted me), so I won't try to refute the accuracy of your comments, they're probably technically correct. And I'll betcha that you do something just for fun in your life, Carl, but apparently it's not homebrewing electronics. Really, what makes you smile, Carl?

monty N5FC

2744. Cheyenne 6v or 12v filament?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-29 00:00:00 UTC
From: Tim <ka8ddz@worldnet.att.net>
Message-ID: <37C9B052.C4840AC2@worldnet.att.net>
Source record: 79797

Have a Cheyenne, the old power supply dumped and I didn't want to troubleshoot it just yet so I re-wired the transmitter for an HP-23 A supply.

I fired it up and the filaments seemed to glow normally, tuned it up on 40, running about 80w out. So far so good. But I notice an AC hum on the signal not present before, it is there when spotting and not running the final too.

Tried to tune it on 15 and *flash*, awww &%$#! Ok. Reset the supply now only one tube lites and the pilots are twice as bright. In reviewing the schematic it seems this rig could be wired for 6 or 12v filament operation. I have only the schematic and no assembly manual so it's difficult to tell right off the bat how it's wired. It *appears* that several things would be different if wired for 6v. Now the question (finally).

I wired it for 12v, If the unit had originally been wired for 6 wouldn't the filaments have glowed significantly brighter? I realize this is probably a poor way to tell but the filaments seemed to glow a "normal" red. I'm trying to determine if it may have been wired for 6v before I continue. Either way it seems odd that one filament would glow and not the rest, its a 6lc6 that glows NOT the voltage regulator. Any thoughts? I'll be happy to scan the schem for anyone who thinks they can help and would like to see it.

>[stuff deleted]

"Empire of the Air" is a good book about those three. The name of the
author might be Tom Lewis; certainly that's the name that comes to mind.
There was a PBS show some years back with the same name, interesting too,
though I don't know if it was based on the book or both were done in
conjunction with each other. I meant to buy it when it came out, never
got around to it, and finally read it last year when I joined the library
for the first time since I was a kid. (I lost interest in the library
about the time I'd worked through all the available books on electronics
and radio, and rejoined when I realized I was missing a lot of books that
I wanted to read because of cost.)

"Man of High Fidelity: Edwin Howard Armstrong" by Lawrence Lessing is the
book about Armstrong that I've read. It came out in hardcover originally,
but made it into a Bantam paperback thirty years ago. I found a used copy
about fifteen years ago, and I've seen other copies since.

If we're on the topic of inventors, I found "A Streak of Luck" by Robert
Conot an interesting biography of Thomas Edison. It too went from
hardcover to a Bantam paperback editition that came out in 1980.
Electricity is so common place, I found it interesting to read about how
the original electrical wiring inside houses were owned by the company,

and the wires were soldered to the bulbs because nobody envisioned it as anything but a lighting system.

"Tesla: Man out of Time" by Margaret Cheney. This is a Dell paperback from 1981. Tesla had influence on the others.

I don't have it handy, but the first bibliography I read of an electrical/electronic inventor, maybe any inventor at all, was a book about Charles Proteus Steinmetz that I bought from the Scholastic Book Service when I was in elemntary school. I still have it, but not at hand.

I imagine there were/are more scholarly biographies of these inventors, perhaps some that were even aimed at the technologically aware. But these are instances of them getting into the public eye.

I'm reading an interesting book from the library right now that is along the same lines. "The Invention That Changed the World" by Robert Buderi. Copyright 1996, and published by Simon and Schuster. It's about the work on Radar just before, and during, World War II, and where it lead after that. It's not a technical book, and makes only a brief mention of Armstrong which doesn't acknowledge his true importance, but it was a period of great advancements in a very short time.

Yes, reading the history is just as important as knoweing the theory that these people brought us.

Hi!

Can you recommend any good books on Major Armstrong? I for one would enjoy reading about him.

The biggest problem I have with building some of the older circuits is parts availability. And I once had an electronics store. Tubes I have, sockets I don't. I have info on building an Ocean Hopper, but lack a source of the tuning capacitor. I do, however, have a repro front panel which I got from someone I read about in "CQ" several years ago.

As I recall, at least one "More-Gain" was a multi-band dipole made out of, for lack of a better description, 5-conductor, wide spaced, plastic, "twin-lead" looking stuff. There were a lot of holes (spaces) in the plastic. It was molded and each dipole section terminated at its particular bands dimension. It took a bit to make sure it didn't twist up. Its just like the handbook multi-wire, multi-band, single-feed point dipole. I recall a colleague of mine, Joe, K3LLL had one and it worked "OK".

Kids are still building stuff, just not as much.

I am mid 40's and still
remember being a kid.

Now I have kids.

These days the kids:

a) Have a lot more interesting things to choose to spend their
free time on.
b) A lot less free time.

Pete:

You really got everyone going on this one!

For starters, ask any new EE graduate the difference between a superhet and a TRF receiver and you will find out quickly that the new EEs don't have a clue how a radio works. The University of Texas at Austin recently changed the name of the EE department to Electrical and Computer Engineering. In the "good old days" Electrical Engineering and Radio Engineering were basically the same thing. Now it's computers and the Internet. Kiss radio goodbye!

The so-called Yuppie generation was brought up on television, a visual medium. Computers are largely a visual medium, so someone brought up on TV will follow right in to computers. Radio is an auditory medium and just doesn't seem to generate much interest with the under 50 crowd.

There are exceptions. Hopefully, you and others publishing on the subject will continue to provide vital information to keep the hobby going.

I am a member of the Texas Antique Radio Club and the average age of our membership is around 60 - 65. Our youngest active member is in his late 30s and we have several members in their 80s. Unfortunately, we have no female members. We are basically just a bunch of hairy-legged old farts. How about plugging a few of the Antique Radio Clubs in your column each month and help us bring in some younger (and female) members.

This I agree with...

> EE was never basically the
> same thing as Radio Engineering.

Depends... Electrical E. - true - Electronics Engineering - was the same as - and some schools did (and still do) offer both. As a student - without much money - I went to a community college (they were called Junior colleges then) which offered both - I took the EsE courses. Cal-Poly - whos campus literally backed up to Mt. SACs (Mount San Antonio College) - also offered (and still does offer) both. The prep classes are the same - but once into your "major" - they were different. There was even a major difference in the degrees issued - Electrical Engineering got an Associate in Science - while Electronics Engineering got an AA - Associate in Arts. The year I attended - they finally got the school - and the accrediting body to change the Electronics degree to an AS

> EE went straight from Power Engineering,
> through a short period without a definite identity, to Computer
> Engineering.

I think many schools have combined the two EEs into one - and yes - they do seem VERY slanted towards embedded systems (various types of computers), etc.

It was a wake-up call to me a couple of years ago - when talking to a recent BE graduate - that he had a difficult time with the idea of a "self powered" radio... he really had to see (hear) one work to believe that enough power could be recovered from the micro volts of a radio signal to drive a transducer to audible levels - any type of re-producer. Crystals? sure if you want to talk semi-conductor substrate and growth of junctions - or even their tendency to exhibit electrical characteristics changes based on wavelength - (commonly known as resonance)... but a crystal as a point contact detector driving another as a transducer??? Had to see (hear) it to believe it!!!!!

Perhaps I'm a "fuddy-duddy" - but I believe there is much to be learned from history both of what works - and what we should avoid --- and it's obviously NOT being thoroughly taught - at least in some places...

best regards...

If true, perhaps that's connected with the fact that we don't *make*
much of anything in this country anymore, except good planes. that's
actually tangible and has mass, period. I disagree with Bill T.- I don't
even see much paper coming out of my computer. I am doing an outdoor
column for a weekly local paper now, and I do it all within Netscape,
only very rarely do I fire up the printer.

Great thread! "To each his own" seems to be the bottom line, but let me throw in a few more ideas on the benefits of playing with dead, old technology.

-- There is a satisfaction that comes from listening to a radio that you built yourself that you will never get from a store-bought radio. I like to work on circuits that are a simple as possible, circuits that are within my capacity to understand at the component level. For this reason I try to avoid ICs. For me they are often mysterious black boxes and detract from the HB satisfaction.

-- There is a challenge to building this simple stuff. Even if the circuitry is old, outdated and simple, it is NOT easy to get a homebrew receiver working properly.

-- Don't write off homebrew gear as inherently inferior to the commercial stuff. As I type I'm listening on a homebrew receiver to VK7FJ in QSO with TF3DX on 20 cw (I can hear them both).

-- I learn something every time I build one of these things. Manual dexterity improves, shop skills improve and (especially in the debugging phase) I learn some of the electronics.

-- When you build simple and/or old radios like this, you are, I think, getting closer to the physics and science of radio than you do with some of the more modern techniques. I earlier said some positive things about those inventive kids who are hacking away at new software. That's great, but I got tired of it real fast and found myself going back to the old simple radio hardware. For me, working on the software seemed very removed from the science and physics of radio. I was just making sure that the code was written right and in the right sequence etc. Look at the debugging phase: with software you are often looking through the code to see if you put a comma where you should have put a semicolon. With a simple radio, you have to think about where the electrons are going.

-- Playing with this stuff gives you a personal connection to the history of radio. I read about tickling crystals but didn't really understand it until I did it myself. I'd read about the joys and difficulties of regen receivers, but didn't really appreciate it until I built and used one myself.

Again, To each his own...

As another response hinted, it might not be your transformer. Check the loads on it - the rectifiers and filter capacitors. Disconnect the transformer secondary leads one at a time and see if it still blows the fuse. That will disconnect and isolate the loads and check just the transformer.

What a great day!

2780. Dentron HF-200A Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-29 00:00:00 UTC
From: Doug VL <swordman@netonecom.net>
Message-ID: <Jdby3.6327$Ee2.204546@newscene.newscene.com>
Source record: 79869

Is anyone familiar with the Dentron HF-200A transceiver? I bought one a while ago with the hope of using it on the Novice bands for code practice to get my code speed up. I have what's now the Tech Plus license and would like to upgrade to Advanced.

I haven't gotten around to trying it yet, or even putting up an antenna for it. I'm mostly interested in SWL and AM BCB DXing. After reading lots of web sites with info on older receivers, and ham equipment, I haven't seen anything on this Dentron transceiver. All the Gentron references are to linears and antenna tuners. And I'm not sure it's even old enough to qualify for this NG. It's about 20 years old, but is all solid state. Must be one of the first without tubes in the finals.

I'm not really looking for technical specs. I have its manual to tell me the basics. I'm just wondering about user's opinions on suitability for CW, whether it drifts a lot, how good its selectivity actually is, and things like that.

Thanks!

I need help locating a computer program. The program may have originally been on one of the early 90's Buckmaster CD's. Some of you may be interested in the program and hoping someone knows of the program. I have lost track of it and would like to find it again. The program had several functions, but the one I used and liked did the following: Start the program, tune your receiver to a signal or beacon, rotate beam antenna from stop to stop (360 deg), At the end of the rotation the program would display on screen a picture of the antenna receive pattern. As I find the receive pattern is very close to the transmit pattern in most cases, the program was very useful. The only connection needed was to connect receive audio to the computer soundcard. I have no idea of the program name or who wrote it. Sure hope one of you knows. Please drop me a note if you can help. Thanks, Bill, KG8AW

Agreed that primitive technologies are fundamentally easier to
comprehend than more complex ones. That's why I'm concerned
about the general decline in the technical competency of the
average ham today compared to the ham of yesteryear. We're
supposed to self-educate and keep up with the times, not
stagnate in the technology of the past simply because it meets
the recreational needs of the moment for some.

> Now, suppose I were to take apart my Qualcomm PCS phone in an
attempt to

I'm
> looking at.

If you have a good grasp of the basics of modern technology, you can
figure out quite a few things. Observe the ground planes, shield
partitioning,
and other aspects and follow a few traces from the antenna backwards
to
help you figure out which areas do what ... try searching out the
part numbers
on the ICs on the web, download the .pdf datasheets, and look at the
specs,

functional block diagrams and applications information.

> There are few if any parts I can cannibalize from the
> corpse to tinker with or use in another project.

If you do what I've suggested, you might find quite a few parts which could be useful.

> it.

I believe you'll find a coherent explaination of the principles of how the CDMA phones work at http://people.qualcomm.com/karn/cdma.html if you're actually interested. (I believe it's in compressed PostScript form,
you may need GhostScript/Ghostview [do a web search, it's a useful tool to
have].)

> By the time an inquisitive kid figures out anything meaningful
> about the way a telephone works nowadays, it'll be obsolete anyway!

You really think that "inquisitive kids" read that slowly today? Even if your assertion were true, he/she'd be a WHOLE lot closer to today's technical realities than he/she'd EVER get building one of Jeff Herman's
1 or 2 transistor MOPA CW transmitters.

> (Which is obvious to anyone sentient enough to use the phone in the
> first place.) Much the same, I think, is true of modern communications
> systems ("radios").

Are you asserting that because it's "harder to understand" modern communications techniques we should all just forget about it and be satisfied with being rice-box-operating CB-like communicators who don't understand how/why their rigs work? I take strenuous exception to that concept if that's truly what you're saying.

On this we agree ... this seems to be a bit of a turnabout from your
paragraphs
above, which seemed to indicate an attitude of hopelessness and
surrender.
Did I misinterpret your comments above?

> The key point is, hacking code on my old 48K Apple][+ was just as

> numbers game.

As one who *did* follow that path, I respectfully disagree. Yes there
are pressures to reduce costs, improve performance, and to get to
market "on time" ... but those pressures demand both creativity and
the ability to appreciate the technology ... so that one can visualize
new solutions to old problems.

radio.

I would agree with that, but that does NOT require the use of
"dead" technologies like regen receivers and 1 tube MOPA
transmitters. (more on this below)

> I like to work on circuits that are a simple as possible, circuits
> that are within my capacity to understand at the component level.
For
> this reason I try to avoid ICs. For me they are often mysterious
> black boxes and detract from the HB satisfaction.

Most IC datasheets provide a complete functional block diagram,
theory of operation, and some even provide some transistor-level
description of at least parts of the internals. Once you understand
how a Gilbert Cell double-balanced mixer works, do you REALLY
need the "gory details" about the one in any given IC? I don't think
so. Think of ICs as "super components" which actually ease the
task of building things. They aren't so "mysterious" if you read the
data sheets and understand the underlying principles of the functional
blocks they contain.

> -- There is a challenge to building this simple stuff. Even if the
> circuitry is old, outdated and simple, it is NOT easy to get a
> homebrew receiver working properly.

Particularly if it's an inferior design to begin with, notorious
for instability and problems.

> -- Don't write off homebrew gear as inherently inferior to the
> commercial stuff. As I type I'm listening on a homebrew receiver to
> VK7FJ in QSO with TF3DX on 20 cw ( I can hear them both).
```

That doesn't say anything about the level of performance of your
receiver. What's its MDS sensitivity? 12 dB SINAD sensitivity?
IIP3? IIP2? Spurious free dynamic range? Adjacent channel
rejection? (I could go on, but hopefully you get the idea.) ALL
that your statement that you could hear those two stations said
was that they were suficiently strong at your location at that time.
It does NOT "prove" that you have a receiver of any particular
level of "quality."

> -- I learn something every time I build one of these things. Manual
> dexterity improves, shop skills improve and (especially in the
> debugging phase) I learn some of the electronics.

That's all good ... great, in fact ... however, if you built something
that was more in line with contemporary technology than that
of decades ago the things you learn would be more useful, more
relevant to the world we live in, and the result would undoubtedly
be a better radio for you to ultimately use.

> -- When you build simple and/or old radios like this, you are, I
> think, getting closer to the physics and science of radio than you
do
> with some of the more modern techniques.

The "physics and science" haven't changed ... mankind simply has
a more complete and useful understanding of them and how to apply
them. If anything, working with modern techniques will teach you
more (and demand that you learn a bit of new stuff.)

> Again, To each his own...

Certainly ... I'm not condemning you for what you're doing ... just
tring to point out that working with more modern technology is
not "hopeless" as you seem to think, would result in your learning
more useful information, and would result in both a better radio
and a more competent ham.

and
> the Internet. Kiss radio goodbye!

Not so ... perhaps the UT@A has chosen to focus on other specialty
fields. However, MANY universities have programs which are very
focused on wireless (radio) communications. (CALTECH, UC Davis,
UCLA, and many others) While I'll grant you that even the MSEEs
coming out of many of these programs need some practical, real world
experience to become seasoned engineers, they ARE well-grounded
in the fundamental technical knowledge.

> The so-called Yuppie generation was brought up on television, a
visual
> medium. Computers are largely a visual medium, so someone brought
up on
> TV will follow right in to computers. Radio is an auditory medium
and
> just doesn't seem to generate much interest with the under 50 crowd.

Your prejudices are showing ... "radio" (wireless in the RF frequency
range)
is a means of conveying information from one place to another without
wires.
TV is just a form of radio comunications, as is CW, SSB, FM, all the
digital
modes, cellphones, PCS, and every other form you could list.

If you're saying that society's use of radio communications is
changing and
maturing, that's correct. However, to "pigeon-hole" "radio" into just

audible
forms of communication is both unrealistic and too confining. And,
yes,
doing so will restrict the number of youth who will join our ranks ...
being
used to the "content rich" multi-media experience of the internet and
the
instant availability of cellphone communications, they can
understandably
be left with a "That's all there is???" reaction to today's ham radio,
which
is stuck in a time-warp of the 50's or 60's at best.

Go to your local movie rental place and rent "Pleasantville" ... it's
entertaining,
but it might also open your eyes a bit to the fact that change is
inevitable and
that fighting it only results in unnecessary conflict which won't stop
change
anyway.

> members.

"Plugging" it over and over again won't make it interesting,
particularly
to the youth of today. Enjoy it if you do, but don't bemoan the fact
that
virtually everyone else finds tubes and regen receivers boring and
inferior.
To do so will only cause you more frustration and disappointment
because
the world is NOT going to go back to "the good old days" and you can't
keep it from advancing.

>think about where the electrons are going.
>

You saying that with software you don't have to think? Them's fightin'
words, Bill! :-)

Seriously though, software is as much engineering as RF. The reason you
weren't having fun is because the software was too simple. If all you're
worried about is the sequences and typos, you're just playing. It's like
worrying if you've gotten your wires crossed on a light bulb/battery
circuit. The real science comes in when you design a system that actually
does something complicated. Real-time timing constraints, asynchronous
events, user interface issues, processing algorithms, etc. that don't show
up in the little toy applications done by beginners are what demand exactly
the same type of creative, innovative, careful and scientific thinking that
the level of RF engineering you're used to demands. To paraphrase someone,
with real software you have to think about where the information is going.

And if software seems too removed from radios for you, consider this - with
today's DSP technology you can implement an AM/FM/CW/SSB/FSK radio almost
entirely in software. This is about as connected to the real world of radios
as you can get. And in a symmetry that I find very pleasing, the computers
that let you do this are implemented almost completely with RF techniques.
So, it's all 2 sides of the same coin. Have fun on yours, but remember that
you're most cordially invited over to the software side to play, and we'd
love to have you stay a while and do some engineering. In the meantime, I
need to get back to soldering up my 2-transistor, 1 IC 100% homebrew regen
receiver.

>
>I don't find any "magic" in that ...

You are missing the point. I am not talking about a high tech.
magazine like Communications Quarterly, but rather a magazine
that primarily serves a scanner and SWL based readership.
These are folks, for the most part, who have never seen a regenerative
circuit, or even a resistor or capacitor. For them, it is something new,
and something that is comprehensible given a proper instructor
and a graduated learning curve. If you can blend a column that deals
with restoration, basic electronic skills, and also offers some "hands-on"
reinforcement, it is an accomplishment, even it only brings a small
fraction
into the fold. The folks who did build the receiver at least have some
technical
knowledge of how it works, and an enormous sense of pride in their
accomplishment.
Why do you elect to belittle their efforts?

For a non-technical person to build even a simple "primitive" receiver,
and to have it work, brings a sense of accomplishment--or even "magic".
Hopefully, it will lead to deeper interest in the current levels of
technology. For
some, it is an enjoyable end in itself. Besides, what is it about "hobby"
that
needs further clarification?
>
>I can't for the life of me understand why anyone would
>be attracted to waste the time in such an endeavour when
>there are so many more useful, more interesting things
>well within reach.
>

Sure, maybe for you, but not for a non-technical based readership.
Beginners don't want to mess with circuit boards, and small semiconductors.
These folks do have basic household tools like screwdrivers
and pliers and can handle what is
being presented. Circuit board projects will be done, but that involves
having a supplier for the boards, and an infallible list of suppliers, and
even
a presentation of rudimentary soldering skills.

>With all due repect, it would seem so ... do you really expect the
>youngsters of today, with all of their exposure to computers, the
>internet, cellphones, and all sorts of other sophisticated consumer
>electronics devices to actually be interested in recreating
>antiquated
>stuff that the real world abandoned decades ago???

How many cellphone calls does it take to comprehend the technology?
This is a rather lame point. Or, are you suggesting doing a cellphone
construction project?
>
>Now don't get me wrong, if YOU want to build stuff like that, that's
>fine with me ... but I think it's ridiculous to bemoan the fact that
>today's youth aren't interested in nostalgia radio when there are
>so many more useful and interesting things they could be doing
>with radio.

Come on, what more interesting and useful things are today's youth
doing with radio? We are faced with an aging fraternity, a dumbed
down licensing structure, and folks with licenses who can't even cut
a dipole. I know, I know, rather stupid to expect them to do so when
you can buy one. On one hand you support no-code, and on the other
you can't comprehend why it is important to start their journey on
a very basic and elementary level. The ends sometimes justify the means.

Probably a level of performance that would shame any HF receiver
with an NE612 Gilbert Cell mixer in the frontend.

2795. FT: Two National HRO60R's

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-29 00:00:00 UTC
From: tubsc@aol.com
Message-ID: <19990829135837.06833.00001493@ng-cl1.aol.com>
Source record: 79884

My downsizing continues... I have for trade two HRO60R's. Receiver no. 1 works very well, very quiet, very smooth reception. Normal paint chipping around rack mounts is only cosmetic flaw. Both radios have the calibrator installed. Receiver no.2 developed a problem about 6 mos ago. Lots of static through the speaker regardless of whether the B+ is on or off. I havent looked into the problem so I dont know how difficult a fix it is.
Included with the above is a HRO60RS rack/speaker - this is a rare option - contains 10 coil sets covering 50kc - 50 mcs. Also includes the 31" tall X 19" rack to mount radio and speaker/rack. Also I have a standard 19" rack mount speaker for rec no. 2.
I want to trade the above for a more modern high performance Gen Cov Receiver such as: JRC NRD 505, 515, 525, 535, 545, or Drake R-7A or R-8 A/B,or an AOR 7030, any Watkins Johnson HF, Harris RF590, Collins 51S1, Racal... You get the picture... Or a transceiver with AM pbt/notch w/ Gen Coverage...
Here's the catch, I dont want to ship all this stuff, I'll deliver HRO's etc within
reasonable driving distance to NE Oklahoma, the coil sets are too fragile to ship, and I dont trust shipping companies to handle these with the respect they deserve...
So howabout it, anyone interested??
Thanks for the read,
Chris KC5IIE

Correction ... I don't homebrew obsolete electronics.

> Really, what makes you smile, Carl?

Designing, simulating, implementing, and verifying something like
an FSK modem which performs within 1 dB of theoretical idea,
yet consists entirely of gates and has no multi-bit a/d or d/a
converters :-)

Designing a new radio architecture which outperforms the previous
one significantly, yet uses fewer discrete parts and costs less to
build :-)

Having my simulations agree within a dB or so of the measured
performance after the circuit's built and tested :-)

(starting to get the idea???)

73,

Gee, you read a book on VCOs or mixers (or study the sections
in the ARRL's "Radio Amateur's Handbook." Once you understand
the funamentals, then you can look at those block diagrams and
begin to understand how they all work together in that chip to make
the subsystem that it implements work.

> I'm trying
> to teach myself some electronics, and I've found that I learn a lot
by

You don't need to "change the way an IC works" ... try gaining
enough of an understanding to be able to select one that does
what you want ... there are PLENTY to choose from.

> > The "physics and science" haven't changed ... mankind simply has

> accurate. I'm reminded of the old "it's turtles all the way down"
joke.

I'm not talking about cosmology, the big bang, quarks, etc. I'm
talking
about the basic physical laws, science, and math which govern the
behavior of radio/electronics. We have a much more complete and
useful understanding of those than we did 30-40 years ago ...
unfortunately, many hams are stuck at the level of 30-40 years ago
when they passed their tests (which many consider to be "graduation
certificates") and closed the books to chase wallpaper and "operate."

Yawn. Why in the heck would you waste time with something like that?
Ever hear of an MC13155? Besides, nobody uses FSK anymore. Complete
waste of spectrum space with no process gain. Let us know when you have
achieved something useful in a contemporary sense, like maybe a 256-QPSK
modem, or (better yet) a correlated front end for an impulse-domain
receiver.

> Designing a new radio architecture which outperforms the previous

"Fewer discrete parts" is right. Unless it consists of nothing but an
ADC and a DSP, it's already obsolete.

> Having my simulations agree within a dB or so of the measured
> performance after the circuit's built and tested :-)
>

Simulations? Yawn. Building:simulation :: sex:Playboy.

2813. Re: Hallicrafters SR-150

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-30 00:00:00 UTC
From: Bismarck Wichy <wichy@dallas.net>
Message-ID: <rsmn4ob9j7147@corp.supernews.com>
Source record: 79752

Well I'll bet you sprayed and sprayed and that didn't fix the problem. It's a good idea of course o do so anyway to keep old equipment in shape... as for me, I tend to used WD-40 cause it seems to work well and it's cheap. Another standby is skin bracer after shave lotion. It's 99% alcohol and 1% fragerence and green food coloring. Just insert some into a noisy pot and it cleans it right up... plus it leaves the radio smelling fresh and clean... and if your lazy old fart like me, you can swig some of it and imagine it's cheap gin... real cheap...

OK now getting back to your problems....

You sprayed and sprayed and it did't help... what's next?

90% of all tube failures are caused by the following...

(1) Emission
(2) Gas
(3) Shorts

(1) Emission - like a light bulb... vacuum tubes have a filament and a limited life. Eventually they slowly fail. The question is how much is the radio used and to what extent. For a service point of view - Clock Radios and TV sets tend to have well worn tubes. These devices are for the most part most of the day. - Ham radio equipment is on only for a few hours a day = chances are the tubes inside it are used very little and emission problems are rare in all cases EXCEPT RF FINALS. In fact, I'll bet you a cup of coffee that you have some ORIGINAL Hallicrafters tubes inside that radio. Emission problems could be burned out filament - in which case the radio will not work and you will not see that tube glow - OR - emission has dropped off in which case the radio will continue working but not as well - this does not appear to be the case so lets rule that out for a moment.

(2) Gas - Vacuum tubes get hot and cold. As such the glass tends to expand and contract. Sometimes a very very small amount of air gets into the tube by way of the pins or the elements inside the tube generates a small amount of gas that interfers with the tube operation - I.E. it does not function - in which case - the stage connected with that tube will not function. Since the SR-150 is composed of mostly daisy chanined stages - a gassy tube will produce a dead set... this does not appear to be the case so lets rule that out. Which leaves...

(3) Shorts - Tubes have elements but they don't wear shorts...oops sorry - they can and do have shorts between the elements. In the old days, tubes were large and had large elements (but very little gain - hi). Your SR-150 was built during the 60's (1961-63) and uses modern 7/8/9 pin mini-tubes. These tubes are rather small and some even have 2 or three tubes sharing one

glass envelope. Sometimes, if they are subject to vibration or are dropped - some of the elements might short together so that one section of the tube is good but the other section is bad. This would cause part of the radio to work and other functions to act strange. Move the tube elsewhere and swap places with the same type tube and you will get yet another set of strange behaviors while the orginal problem mysteriously goes away.

I'll be willing to bet your problem is #3.

A tube tester will tell you which tube has the problem in a couple of minutes. Since you don't have one - I recommend you try and put all the tubes where they were when you first started. Since your problem was an ALC/AGC one - I recommend you purchase that ALC/AGC tube and see if that fixes it. After that we can keep going one at a time... as you can see - you might as well get a tube tester since you will pay for a tube tester one way or the other...

Ooooh hell petey.. tell you what - email me direct and if you want - you can send your tubes to me and I'll check em for free and send them back... so you will know for sure... - WD0HCO -

Strange, but a few days ago, I was doing immunity testing on a digital data link receiver; a nice A/D and then some hot dedicated computing. It stood up to CW fields like a champ. Then we turned on some pulse modulation, you know, like to simulate motor brush noise or an auto ignition. Funny thing happened. The ole digital magic really crapped out when we hit a PRR which was a subharmonic of the sampling rate. If that had been an analog superhet receiver, I doubt if there would have been more than just a little ticking at the detector, and an FM detector would have eliminated even that.

Sorry, I'm no digital design guru; I just get to screw them up.

Ed

You seem to have some VERY dirty/corroded contacts in your switch wafers - and most likely the vatious potentiometers are equally in need of attention.

I would suggest that you go to radio shack and buy a can of good quality tuner tonic/contact cleaner, and carefully but thoroughly spray all switches and potentiometers, working them thoroughly thru their range of motion as you do. Especially try to get the spray INSIDE the potentiometers - they usually have a small access opening at the point where the legs of the element exits the case. After the application, the various components MAY be slightly out of calibration until the cleaner fluid thoroughly dries out - and DO spray in an area with good ventilation - trhat stuff's strong!

If you want to be REALLY thorough, you can remove each tube, and carefully spray a small amount directly into each pin of the tube socket - they manage to get their fair share of corrosion as well...

Greetings!

While Dancing with the Mouse on Sat, 28 Aug 1999 07:40:46 -0400, the
Modem interrupted with an MNI from "Hagstar <yonny@worldnet.att.net>",
and the MotherBoard buffered this to Video RAM:

:+> How about an event specifically for kids at a swap/conference, with cool
:+> displays of breadboards and spark gaps- what kid could resist such a
:+> thing ? BUT- how many kids are going to come on a Weds or Thurs at 7 am
:+> ? It would have to be Sat at noon, or nothing. This would be a great way
:+> to teach electronics- Bardeen, Shockley and those guys where great, but
:+> transistors are BORING, awful, and dull compared to our glowing bottles.
:+> And kids NEED to learn about basic electronics today more than ever. The
:+> liability issues today, a opposed to the carefree 60's when I was making
:+> 12K Jacob's Ladders in the basement with bell wire and coat hangers,
:+> would make lower B+ voltage circuits essential, though.
:+>
:+> Just a thought,
:+> John H.

Speaking of that.

I remeber somewhere that someone had made plans that can fire Neon
Bulbs.

I believe you can still find drive buffers and isolation buffers to
fire something like the NE2H or NE2's with about 40~75 volts.

Or design RF projects that can use the Neon bulbs as a means to
indicate - with low-level RF strong enough to fire one of those bulbs.

I'll look thru my notes to see if I can find those old "Electronics"
handbooks. ;-)

No guarantees though...

--> Looked at from that perspective, no, it doesn't make much sense.
Building something yourself can teach you a whole lot about how those
off-the-shelf radios work, though. As a learning experience, it's useful.
And it feels good, too, at least to me. I assembled, a while back, a
'Neophyte Receiver.' This was described in QST around the mid-80's. It's
a two-chip design using an NE602 for the front end and detector and an
LM386 as the audio amp. Not exactly high-end performance, but putting
together a receiver yourself and then having it work is pretty neat.
In some ways this is a golden age for homebrewing -- I mean, you can get
half a radio on a chip! If you're designing something new, these kinds
of things can be great short-cuts. It's as if the inventor of the
gasoline engine had gone down to the local general store and found
spark plugs. ;)

> Homebrew radios, like homebrew computers are fast becoming

> and configurations that are now standard, but the sun is setting on
> the sheer viability of the home built radio, computer or telescope.

--> Yes, but we still need tinkerers to provide us with new designs and
ideas. Your comments on off-the-shelf equipment being better neglects the
fact that all of that off-the-shelf equipment, at some point, existed only
in the mind of the person who invented it.

Incidentally, I'm not an old timer. I'm 22. I've also got an interest
in tube equipment, not for any practical value, but because it's often
beautifully constructed. It's interesting to see equipment where real
effort was put into making it look nice. That doesn't happen anymore.

Would like to buy a sideband splitter (product detector) to use with my 390A. Like Delta Electronics ISB-1 or a CV-591. Please respond directly to me if you have such for sale, and 73s.

But if you're just trying to self-educate yourself, how are you going to learn how a VCO or mixer works by studying a block diagram? I'm trying to teach myself some electronics, and I've found that I learn a lot by building things I can "play with". It's kinda tough to change the way an IC works...

> The "physics and science" haven't changed ... mankind simply has

Hmmm, I'm not so convinced that there's a "more complete ... understanding" of physics -- it seems that they just keep postulating smaller and smaller particles to explain why their theories aren't accurate. I'm reminded of the old "it's turtles all the way down" joke.

From: tom@bluesky.org
Message-ID: <tom-3008991137490001@mti-r1-aptis-4-p1994.cybertrails.com>
Source record: 79833

I'm trying to get my Johnson Ranger operating and probably need some help. It seems to tune up per instructions on the higher bands, but on 80 there's no grid drive and osc and buffer currents are not right. Perhaps this is a common problem related to the way the coils are switched when moving from 40 and above to 80/160? Any help appreciated! Reply to tom@bluesky.org

I'll bet you also think that "No Code" will cause more young people to join. When I was 15 it was the *code* that got me and others interested in hamming to begin with.

Could I see the raw data on that statement please?Please, Please, Please do NOT *even* think to speak for me. I'll give you that regen receivers are infererior but boring is a state of mind that you seem to enjoy, not "everyone else". I'm 37 years old and I've got a masters in physics along with lesser degrees in math, EE, English, Military Science, and Fine Arts. I've been designing embedded computers and writeing operating systems for 12 years now and some of those computers have wireless componets in them. I have a good understanding of how to use modern radios but up to a few months ago I was as ignorant as a new engineer. (Every engineer that we hire finds two things on his desk on his first day, a resister color-code chart and a complete set of Forest Mimms project books from Radio Shack. Every one of them can write out the math equations for a feed back control circuit but not one of them could build one. It's sad when a person goes

to collage for 4 years for electronics and can't read a resister and doesn't know how to use a transitor.)

I say was ignorant because a few months ago I was cleaning out some old boxes and ran across some Gordon West code tapes that I had bought back in 1983. Even though I've been interested in ham radio since I was a teenager I never got licenced (my Elmer left suddenly and I had a car that needed "fixin'"). Three months ago when I found those tapes I got bitten by the bug again. This time I actually put the tapes in the tape player and started learning.

While learning code I decided to build a radio receiver so I could copy live code. I built a 5 tube super-het from an article I found in an 60's QST. I decided to use tubes because I had a bunch of them stored away from when I was 15 and I wanted to be entertained as well as to learn. Contrary to some people who seem to think that they can speak for an entire generation, tubes and hand wound coils are entertaining. After spending 20 years seeing electrons becoming more and more confined to "black boxes" it's fun to watch them "move".

Well, the radio didn't work and then I found I had no idea as to how to even begin trouble shooting it. I found that I was trying to stand on the shoulders of giants with no comprehension as to how they got to be giants. For all my vaunted education and experience I was ignorant. So I built a one tube regeny, it was simple, the theory was easy to understand and most importantly it worked.

I also built a transmitter (see my thread on this news group under "HELP Tube Guru advice needed.). It is a tube transmitter based on the 1625 using the 12BY7 for the oscilator-driver. Anyone interested in the circuit can find it in the 1967 Radio Amatuers Handbook, it is the Inexpensive 75-watter. With the help of some of the hams on this news group who know tubes and know how radio really works I will soon have it completely up and running too (Thanks Guys!).

I cannot begin to relate how much I've learned in the past few months about radio and how it works. I do know that I learned a lot more from that one tube regeny than I ever learned from that kit I got from Ramsey (it still doesn't work but with all I'm learning I'll fix it some day). Now that I understand how my transmitter works and how a regeny does what it does I'm ready to tackle my next radio. I built the Mate to the Mighty Midget (some of you people know what I'm talking about, if you do please read my next thread I'm planning on coming out with soon called "HELP More Tube Guru's needed") and I plan on learning a lot more. Maybe by the fall I'll be ready to tackle that 5-tube super-het, but I've got a lot more to learn. After I've mastered these fundamentals I fully intend to move on to transisters and IC, operating on the giga bands with tubes is not a good idea but when I get to that stage I'll know how I got there.

In short (which is how I should have keeped this) I'd like to say that it's okay to stand on the shoulders of giants with out knowing how the giants got there, just don't expect to ever become a giant one day

yourself, those that do not know there past, have no future. That's what tubes, and code, and sparkgaps, and the smell of high voltage ozone are all about. It has nothing to do with "reviveing dead technology". It has every thing to do with learning and building a foundation and *earning* the right to stand on those giants shoulders.

Mostly, the point I was trying to make with all the bogus technobabble
was that not many of us who _do_ build stuff can afford to throw rocks
at others for failing to advance the state of the art with every
project. If I mock someone for using a 12BE6 mixer instead of a Gilbert
cell in his radio project, you could turn around and mock me for using
FSK instead of M-ary Q-whatever modulation in mine.

IMHO it's better to refrain from criticizing others' homebrewing
preferences altogether, and save the flamage for more worthy causes.

I should have just said as much in the first place, I guess. :-)

The point that I was trying to make is that too many hams
limit themselves (either because they are just into nostalgia,
because they don't know any better, because they haven't
kept up with technology at all, or because someone else told
them that "SMT is too hard to work with" or "ICs are too
hard to understand, build everything with discretes.") to
doing little beyond regurgitations of things that were old
decades ago.

I really believe that we HAVE to modernize both our
rules and our technology to survive. Right now, too many
hams are happy back in the 50s and 60s ... that's unhealthy
for a technical service such as the ARS. It neglects the
majority of our Basis and Purpose ... the reason ham radio
exists and has bands of frequencies to use.

> IMHO it's better to refrain from criticizing others' homebrewing
> preferences altogether, and save the flamage for more worthy causes.

I certainly think that prompting ... even prodding if necessary ...
hams to move forward towards today instead of snoozing
in the past is a worthy cause. (you snooze, you lose ... in this
case our bands, eventually if we remain stagnant.)

Even the ARRL has recognized this as a major problem facing
the ARS in the coming decade.

Well, I certainly found that site enlightening on the matters of "Chakra points in the human body, relation to hyperbolic channels," "Gulf War Syndrome as a step in global socialism," and the "Takyon capsule of Dr. K. Lambrakis," but I was unable to uncover any evidence of the superiority of early NTSC color sets to modern high-resolution graphics displays. Perhaps you could be a bit more specific?

The widow of a silent key gave our QCWA Chapter a real "goodie".

We have a Drake 2 B receiver, and the companion 2 BQ
"Q multiplier" for sale.

These appear to be in great shape, although I do not know any of the
real history of the set.

As no one in the chapter is interested in them, they have decided
the best thing to do with the equipment would be to sell it. In
checking prices, it seems that $300 is a fair price.

The equipment is located in Ocala, Florida. Pick up would be great.
If we need to ship, add shipping charges.

Thanks.

Greetings ,

I have for sale a WRL Electronics - "Globe LA-1 Linear amplifier"
for sale.
This amp was manufactured in 1958 , employs 4 6CN6 (EL-38) tubes and is
in very good condition. I can provide a Jpeg photo on request.
Asking 150.00

I also have a Heathkit SB-500 2 Meter transverter , from the estate of a W3.
This rare piece is HEATH factory assembled and comes with all cables and a
partial copy of the manual. Very nice condition but untested on air.

Asking $100.00 Buyer pays shiping on either piece from zip code 15212
shipping weight is about 25 pounds for the amp
and 15 or so
for the SB-500

Thanks for your time Inquires to : NI3I

One tube regens? Yuck.

The Golden Age of Homebrewing is *now* - components are
available of unprecedented performance and sophistication,
and they're dirt cheap, too. Builders of today have options
folks in the past never did - witness that nifty DSP
transceiver in the September QST. Consider how much time,
money, effort and hassle it would take to duplicate its
DSP IF stage in analogue components...

"Magic" takes different forms. Like seeing the output from
my newly rewritten weather satellite program the other day,
with a more sophisticated AM detector than my old program
and LMS adaptive filtering for noise reduction. Gasp!

Builders are still around. Just because it isn't the kind
of radio *you* approve of doesn't mean it's not homebrew.

>

Hi OM,

As an EE with 41 (now going on 42) continuous years of earning my
living
in the electronics industry, and 44 years of ham radio enjoyment,
I heartily disagree!
My job has never been a "high stress numbers game", before or now.
To make this so, I have consciously avoided job "opportunities" that
involved higher level management or stressful, politically-oriented
jobs.
In other words, I stayed with technical work. I've never regretted it.
I still look forward to going to work in the morning, and I still use
daily
Ohm's Law and the other fundamentals I learned almost 4 decades ago,
while working with SMT devices and highly integrated analog and digital
circuit design. Contrary to what I have read occasionally, the
fundamentals of circuit design do not change, but the tools sure are a
lot better.
As I have stated here before, we are living now in a golden age for
ham radio homebrewing. Never has it been easier, or cheaper, to build
excellent performing receivers and transmitters, particularly for simple
modes like CW and FSK (the only two I use). Integrated devices have
made it easier to assemble functional circuits, not harder. Stuff that
I
throw together at home does not require anything but elementary
electronics
knowledge at the level of the ARRL Handbook or similar sources. But as
always, for those who do not have the interest and/or motivation to
learn,
most everything new is is impossible or "magic", or the realm of
"experts".
Lucky for me, I had no such preconceived opinions about electronics when
I got started at age 13.

73,
Don, W6JL

> waste of spectrum space with no process gain.

Why indeed? For fun, actually. Gosh, my logbooks continue to fill up with worldwide QSO's on AMTO, PACTOR and CW, the only three modes I use. And Baudot RTTY remains by far the most heavily-used of the keyboard modes, far ouststripping all the Clover, Pactor, Amtor, PSK31, GTOR, etc so far.

Not all of us care about spectrum utilization or "process gain". Even AM has a following these days, remember. What is essential for competitive electronics in industry has, for me, little to do with hobby enjoyment of same. Not the same goals, or rewards, for me.

73,
Don, W6JL

2875. What is an R-12 speaker worth????

Hi All,
I have a Hallicrafters R-12 Bass Reflex speaker here, not grey like the Hallicrafters boos says it should be, looks like it was stained to look like mahogany. I can see the wood grain under the stain, so it was either stripped of paint before staining or was never painted and came from the factory this way. In any event, it works just fine as I have it hooked up to an SX28A. The Hallicrafters book neglected to put a current worth on it. Any educated guesses out there? Please respond directly to:
nc183d@aol.com

I've never even remotely suggested anything you are posting.
components! Clean your glasses and try again.... Was that
YOUR article in QST?
```

>"Magic" takes different forms.

No kidding, one thing you have correct...

>my newly rewritten weather satellite program the other day,
>with a more sophisticated AM detector than my old program
>and LMS adaptive filtering for noise reduction. Gasp!
>
>Builders are still around. Just because it isn't the kind
>of radio *you* approve of doesn't mean it's not homebrew.

No prize here, perhaps you need to reread exactly what I wrote.
I think I did a chapter on a solid state HF transceiver for the
ARRL handbook in the seventies, and have several QST cover
plaques for articles on a six meter solid-state 6 meter rig, and
an early article on 2-meter frequency synthesis. That,
besides hundreds of other articles in QST, Ham Radio, 73,
Communications Quarterly, etc....

Methinks you are being rather presumptious in your opinions.

> Ever hear of an MC13155? Besides, nobody uses FSK anymore.
Complete
> waste of spectrum space with no process gain.

Not when it's frequency-hopped ... besides, M-ary FSK is good for
weak signal ... as M increases, the required Eb/No decreases ...

> Let us know when you have
> achieved something useful in a contemporary sense, like maybe a
256-QPSK
> modem, or (better yet) a correlated front end for an impulse-domain
> receiver.

I believe you mean 256-QAM ... QPSK implies 4 phase states and doesn't
go with "256" ... and the ultra-wideband stuff that I believe you are
referring
to as "impulse-domain" isn't approved by the FCC.

> > Designing a new radio architecture which outperforms the previous

Simulation is a valuable design tool ... certainly better than "cut
and try and itterate." Modern designers don't build squat without
first simulating it.

> > (starting to get the idea???)
>
> Likewise, OM? :-)

Yea, I'm getting the idea that you "talks a good talk," but don't
actually
know how to "walk the walk" when it comes to actual design practices.
(I'll bet you can beep real fast, though ... :-)

Neat little 6 meter AM Transceiver, circa mid 60's.
Checked it out and seems to work OK. Someone
added a switch on the front, turns off RCVR, seems
it was paired with a L'il Lulu. Comes with "original"
manual (a rarity these days)!!
$75 plus UPS packing and shipping costs.

--> It works both ways. Modern conveniences become necessities if you let
them, it's true. But that isn't necessarily a consequence of their design.

Technologies, I think, tend to go through four stages. Stage 1 is when
it's experimental and hardly works. For cars, this would be the very
early horseless carriages that were basically toys for the rich. Stage 2
is when the technology works reasonably well, but with a lot of effort.
For cars, this would be the Model T stage of development -- reasonably
reliable transportation, but you had to fix it often, hand crank it, and
adjust your own mixture and spark advance. Stage 3 is when the technology
reaches the point where it mostly takes care of itself, freeing the user
from many of the details. Cars probably reached that point in the 50's
or so, and have been being incrementally refined in this area ever since.
Stage 4 usually overlaps with 3, and is when unnecessary frills start being
added. A modern luxury SUV with shift-on-the-fly 4WD, active suspension,
power everything, and a 6-CD changer is a good example of Stage 4.

Personally, given the choice, I prefer to stick with stuff from Stage 3.
Cars I can fix in my driveway, radios that still came with schematics,
those kinds of things.

Oh, alright, then.
You are using the speed of light as a base. and multiplying that.
You think that the speed of energy in magnetic circuits and solid state devices is happening at the speed of light constant, which is just not so.

The energy/effect transfer in a vacuum tube is closer to the speed of light, and really we should say that the transfer is 70 times slower in solid state.

There is, in quantum physics a hint, and scalar physics, an intriguing effect where the "projectile" strikes the target halfway across the universe, just BEFORE the projectile leaves the source.

Now thes peed of light, as you know, has been assigned a constant value.
Is it accurate and precise?
Under all circumstances?
No? Then it is not absolute.
Furthermore, what is light? Just what we can see, or the entire electromagnetic spectrum?

It has been assigned to the latter rather arbitrarily.
You can do the math to see that a sound wave travels slower than a radio wave which travels slower than infra-red light, which travels slower than cosmic rays and so on BEYOND the energies listed.

Light traveling through a medium will have a different velocity than that of light traveling through a different medium.
Same thing all the way down the scale to sound waves, and up the scale to gravity waves which are faster travelers than light or electrons.

Ahh..... no. I've done enough k-space calculations to know that electron or energy transfers do not take place at the speed of light.

>

I'm really going to have to see the numbers on this. I'll do the calculations for the transfer speeds for a standard doped NPN transister substrait if you'll do the calculations for the vacuum tube. By which I mean I'll do the electron transfer rate in the valance band. Then we can compare math and numbers.

> There is, in quantum physics a hint, and scalar physics, an intriguing effect where

Are you talking about Bell's theorum? The jury is still out on that. While getting my masters in physics, I had a mentor, Dr. George Duffy, who was heavily involved with Bell's theorum and published several papers on it. Besides, that theorum or any other really has nothing to do with calculating electron transfer rates in semiconductors or tubes.

> Now thes peed of light, as you know, has been assigned a constant value.

> Under all circumstances?

If you are refering to the Heisenberg uncertainty principle then of course precise measurment can never be obtained.

> No? Then it is not absolute.

Hmmmmm..... Yes it is an absolute if you assume free space and the engineering view that at some point you have to accept your numbers and use them.

This is only true for EM waves traveling in some medium and not free space. When traveling in free space all EM waves regardless of wavelength travel at C.

> Light traveling through a medium will have a different velocity than that of light
> traveling through a different medium.

True

> Same thing all the way down the scale to sound waves, and up the scale to gravity
> waves which are faster travelers than light or electrons.
>

I'm not sure what you are trying to say here. Sound waves are not EM in origin and there for you cannot compare thier propagation to EM or, if you prefer, light waves. The same holds true for gravity waves. They are not EM in origin either and as for the rate of propagation there is much debate by Roseburg, Wheeler, Thorn and others as to whether gravity waves propagate at all or if they exist within the frame work of the universe as part of the so called "frabric". In effect sound and gravity do not exist on the same "scale" as you put it.

As for electrons they enjoy the benifit of the duality. Are they particles or are they waves. The answere is, of course, both. An electron as a paticle can stand perfectly still as Millikin's oil drop shows. When electrons are accelerated as they are in a cyclotron they will show wave like properties but of course they can never get away from there particle nature as (if I am not mistaken) m=mo/(1-v^2/c^2)^1/2. As you can see, as v approches c, mass approches infinity. And in fact any one involved with electron acceleration in a cyclotron can tell you that as the elctrons approach @ 1/10 c they must begin to take the extra mass into account and increase the B field to the Dees to compensate not just for the velocity but for the mass increase as well. So again as you can see electrons cannot be treeted like EM waves and therefor they too do not excist on the same "scale".

However this does bring me back to my original observation. I really need to see the math as to how energy transfer within a tube is 80 times faster than in a semi conductor. Just so there is no ambiguity here I'm going to calculate the time it takes for electron flow to start out one end of a semi conductor (doped silicon) when an EMF is applied to the other end. That will be my "speed of emission" for lack of a better term. You can calculate the "speed of emission" for a tube then we'll compare math and see if energy transfer is really 80 times faster. Is this what you have in mind for energy/effect transfer or where you thinking of something else?

As the commercial says, tuner cleaner, $5.00; speaker wire, $3.00., SX-42 "Priceless". This is my favorite RX of all time. I think that it is pleasantly more aesthetic than my Collins 51J4, Realistic units, and all of my Zenith transoceanics.
Sorry to complicate the subjectivity here, but obviously my response is totally emotional and objective. I probably could sell the Collins anyday for much more than the Hallicrafters.
I would ask for at least $300 for the SX-42 with the speaker, although at the same time I know that the Collins would get closer to $1k.

I have a Galaxy 3 with Matching Speaker/PS and mic. This is a
tribander SSB radio 20-40-80. Output is 180 Watts. It is in very good
condition. Have jpgs if you like. It's clean inside and out.
$195+shiping.

Greetings

I own a R-395 also know as a ANPRD-1, which is a big, squarish army green direction finding receiver built in the '50's for jeep use. If any one has a junker unit available, I need the loop antenna, either of the two power supplies (one is a dynamotor and the other is a battery box). I could also use the compass and the tripod. Any help would be appreciated. Hoping to complete a display for my M38A1 jeep.

Greetings....

Anyone got a junker FL-2000 Linear or an FTDX series transceiver?
I have a broken top lid latch and am having a hard time finding a
replacement This is one of the two latches that secures the top lid to the
case. If you can part with one, please let me know.

Thanks for the bandwidth....

I really can't do the math anymore.I would look at a near vacuum, the charge attraction, and thermionic properties.
A vacuum would seem to be, under these circumstances, a clear path.
Any SEMIconductor would have resistive and capacitive properties causing a delay effect, I imagine.
Sort of like a luminance delay in television? It is needed because the chroma signals would not align with the b/w image due to delay.

That's true except it was used to show that there are more things possible than the layman would assume. I'm glad you have had the interest to pursue these things.Try to look for how it could work.
Try to find what the limiting factors are in mundane calculus.
Again off-topic, but the attractive force leading to acceleration is greater between a large mass and a constant, than a small mass and a constant.
This is only to show that the old line of thought and the usual formulae will always yield the confirmation they were designed for.

If you are referring to the Heisenberg uncertainty principle then of course precise

> measurment can never be obtained.

But I mean further to point out that there is a difference in propagation between various wavelengths, which appears to refuted below.

>
>

> > No? Then it is not absolute.
>
> Hmmmmm..... Yes it is an absolute if you assume free space and the engineering view
> that at some point you have to accept your numbers and use them.

So let's assume something else, and assign values which pertain specifically to each entity being considered.Constants have to be watched. And I think that possibly you might discover the key in the area of new technology, if you can differentiate between light and 'light', light and supersonics, the latter of which is both propagated physically and electromagnetically.
Just put a piece of wire on your signal generator, and approach your hearing high threshold.
There is a window in which you will hear the wire, without a sonic transducer.
But enfin.

This is only true for EM waves traveling in some medium and not free space. When

> traveling in free space all EM waves regardless of wavelength travel at C.

Check this out. In the entire known spectrum of wavelengths, at what clearly defined point does a radio wave become a sound wave?

>
>
> > Light traveling through a medium will have a different velocity than that of light
> > traveling through a different medium.
>
> True

So the same signal traveling through the vacuum of a tube, travels what- faster than through a semi-conductor?A superconductor, yes. The speed may well be higher.

I'm not sure what you are trying to say here. Sound waves are not EM in origin

Okay. I wind a huge coil with an impedance of four to eight Ohms.
I hook it up to a hundred Watt amplifier, and run 800 Hertz.
There is no vibration permitted.
Yet it WILL emit magnetic waves which you do not hear.
A tuned ELF RF circuit will detect this.
These waves travel at light speed?
Or does the EFFECT travel at light speed?
Or does the signature?
Start cranking up the frequency, and go all the way up the spectrum to visible light and beyond.
It has to be a really good amp to do this, and of course impedance matching.
Again at which point is sound not a radio wave.

and

> there for you cannot compare thier propagation to EM

I just did. Sound and EME are not mutually exclusive.

> or, if you prefer, light waves.

Same thing, almost.

> The same holds true for gravity waves. They are not EM in origin either

And here is the crux for deep thinking, imagination, and hard work.Break this taboo, or rather, find the conversion factor between gravity and magnetism.
You'll have the World and Solar System to do with as you please.
Inherent in the relationship between gravity and magnetism, you'll find time variations, which is also nothing to do with tubes, but perhaps the whole thing should be looked at in order to develop a conceptual basis for hypotheses.

> and as for the
> rate of propagation there is much debate by Roseburg, Wheeler, Thorn and others as to
> whether gravity waves propagate at all or if they exist within the frame work of the
> universe as part of the so called "frabric".

I believe that they exist mostly within the bath or fabric. The principles can be legally skewed somewhat to facilitate what some people refer to as free energy and/or cold F.

> In effect sound and gravity do not exist
> on the same "scale" as you put it.

All energy is convertible, and therefore connected somehow. Whether the scale needs modification, or the interpretation of the scale requires adjustment, doesn't matter.You shall find the flaws and correct them.
If I dip my brush into the same paint can all the time, my paintings will be very monotonous, and not progressive.
Just look at the transistor! What a development. How radically different it is, compared to the electron valve.
And yet . . .
Some principles in operation are very similar, if not apparently identical.
You KNOW that new formulae had to be developed to account for the differences inherent in the two examples.
Apply that knowledge to all other areas of knowledge, and adapt the formulae to fit the facts.

>

> not excist on the same "scale".

A bit deep, but what about the "spin" between widely separate neutron or electron pairs?Millions of miles apart, yet one knows the other. So there is more depth to nucleonics than merely particles and waves.
As for the mass increase, that is just another form of time conversion, and may be fudging,

to protect the constant.
Hey, if we lose our constant of time, everything goes wide open.
Most scientists cannot stand that.
But they must adapt to natural phenomena.
Here is another wild statement from me, but true nevertheless.
"The speed of light is changing."
I read on the Net coming from scientists, that time is slowing down. I'm not sure if I got it the right way around, but there it is.
Gravitational constant is also changing.

>

> energy/effect transfer or where you thinking of something else?

It is definitely what I had in mind.But the math, I would have to study for a year to bring it all back. I won't use incomplete bits and pieces if do calculations, and some of these calculations won't follow accepted standards.
So it is better left to you youngsters to find a way to make my statement true.

By the way, there is a perspective which would be called cheating by some, but in that perspective you enter three-dimensional mathematics.

You would have three ninety-degree angles within a circle.
So 270 degrees instead of 360.

One divided by zero equals one.
Zero divided by one equals zero.

When a mass unchanging approaches the speed of light, it begins to curve sharply at ninety degrees into the time line.

Consider the superstring theory, bosons, and singularities.
I am sharing this with a scalar physicist, address above, since you share with homebrew, okay?
Feel free to contact Zeropoint.
Find out about the Grand Unification of Everything Theory.

I have three KWM-2 rigs. One of them I use very seldomly and I have just noticed that the red line in the dial does not move when I rotate the small knob on the right side of the main dial. On looking inside, I note that the back of the knob has a wheel with nothing attached to it. Is there a special part that it needed or is repair simply a matter of dial string. Any info appreciated

Yip. Color is a whole lot slower than black-and-white. They got black-and-white photography goin' in the late 1800's, but color didn't really catch up 'til the '30's or so. Same with TV. As I r'call.

Good thing they didn't have the delay thing figgered out back then, though, or we woulda hadta wait fer the color b'fore we got anythin' at all. Then we woulda missed all them Chaplin movies. To say nothin' of Dr. Strangelove.

Ed - That wheel is supposed to clamp onto the dial part that has the red hairline - there is no dial cord. You probably will have to use your finger to move that part all the way to the left and then turn it clockwise to engage into the wheel. Good luck! --- Steve KK9ZZ

Read Part 97.1 "Basis and Purpose" ... that expands on what's
expected of us (and what's used as justification for our having
billions of dollars worth of spectrum at our disposal for free).
You'll find that the majority of that section is technically-based.

Interesting that my SB-102, which I bought and built in 71 or so
has just begun to exhibit exactly the same problem. I have tried various
mechanical tests (rapping,tapping, banging, thudding) but the LMO
will sit happily on freq and then without provocation jump 1 or 2 KHz.
Makes working CW especially difficult. Any feedback on Bob's post please
dup to me as well.

Nobody's trying to deny you happiness ... just trying to encourage
you to realize it's not 1930-50 and "get with it" on some up-to-date
stuff (for your own good and the good of the ARS).

> Everyone doesn't have to be working on the same projects,
> with the same goals and methods, do they?

No, but endless regurgitations of the projects of the 30s-50s
don't serve a very useful purpose. They result in inferior equipment
and don't teach much in the way of skills/knowledge which are truly
useful in today's world.

> You mentioned relevance and value several times in this
thread--Relevance to
> what? What sort of value?

Relevance and value in reference to the world we live in today. Only
a nostalgic "collectables value" makes old tube gear worth more than
a (very low) per pound scrap value. That's an intangible "value" that
is not going to impress the regulators ... particularly compared to
the
billions of dollars they could raise by auctioning off our spectrum.
However, the tangible value of people who understand and can use
modern technology to provide USEFUL voluntary communications
in times of need (and can/do build the infrastructrue necessary to do
```

that) WILL impress them.

> I commend your dedication to innovation and
> development of radio technology, I do. Clearly it is valuable to
you, and such

value about
> hobby radio has little to do with new technology. I have no formal
training
> or education in engineering, RF or otherwise. Exploring and learning
a little
> science and antique engineering, via technologies that are
relatively simple
> and static, has ultimate value for me.

But can't you see that learning "antique engineering" is like learning
how to make fire with 2 sticks compared to today's technology?

I understand that you have no formal training or education in
engineering.
Guess what, neither do I to speak of ... I went to college at 16 and
attended
for 1-1/2 years until my Dad died when I was 18 ... I never was able
to finish
college ... but I've worked as an RF engineer for over 27 years now
... totally
self-taught. I've even taught college level courses in electronics.
(credentialed
in CA in the 80s on the basis of knowledge and experience which the
Board
of Education considered "at least equivalent to a Master's Degree")
I've
worked for or consulted for some of the most prestigious companies and
institutions in my field.

PLEASE UNDERSTAND that I'm NOT saying these things to "toot my
own horn" ... just to drive home the value and practicality of
self-education
and to encourage you to not settle for "only building simple old
stuff"
because you think it's somehow easier or that it's beyond your
capability
to design and build something more modern.

>Likewise, exploration of the social
> history of technology has supreme relevance to my work as a college
teacher

know
> everything :) Forgive me, all, for even mentioning the term, but

this thread
> rings a bit of the ceaseless CW debates. Can't we all just get
along?

I'm not trying to fight with you ... just to state the *serious* need
for
modernization in the ARS in terms of technology. Too many people
are stagnated in the past. If you find it fun to build/operate an old
one-tube radio, I have no problem with that. What I have a problem
with there being such a large body of hams who claim that's all there
is and all one needs to know.

> I won't
> force CW and simple valve circuits on you, nor claim vague
quasi-spiritual
> benefits accrue from them to all

I appreciate that statement.

>(though you will pardon me if I say that in
> some small ways both 'antiques' intimate to *me* the esoteric and
sublime).

Whatever "blows air up your skirt" as they say ... but I still
encourage you
(and everyone else) to broaden your horizons into more modern things
as well.

> What I keep forgetting is that it is a hobby *&%$-it,

Actually, it's defined as a service ... NOWHERE in the enabling
regulations are the words "hobby" of "fun" mentioned once. That's
not to say that it can't or shouldn't be fun. Of course it can or
few would become involved. However, it's PRIMARY intent
(government's reason for giving us all that valuable spectrum for
free) is self-education and training to maintain a pool of people with
USEFUL communications knowledge and skills ... and useful must
be continuously redefined in terms of comtemporary technology
and communcations methods in order to truly meet that public
interest aspect ... it's almost 2000, not 1930-50, and the
government and emergency services folks no longer need or
want a corps of telegraphers ... they need/want people who
understand and can provide modern communications services
when their normal means of communications go down.
We HAVE to keep up with the times or we'll become
worthless. Unfortunately, we're not keeping up, but
falling further and futher behind. Even the ARRL has
finally realized this and is grappling with how to go about
doing something about it ...

> but for some it is also their actual profession,

Yea, it's great getting paid very well for doing something I
enjoy enough that I do it for free for fun at home, too :-)
(I've been likened to "a mailman who takes a nice long walk
on his day off." :-)

> so that makes us somewhat like two Spaniards--a
> Catalan and a Castillian-- yelling at one another, each
uncomprehending the
> other, claiming to know the only way to be Spanish.

My wife is from Mexico ... she claims that people from Spain
(and other places ... Argentina in particular) "speak Spanish
with funny accents." :-)

Seiously though, all of my coments are intended to stimulate some
thought, awareness of the need for modernization, and to, hopefully,
prompt some folks to "think out of the box" and try some stuff that
they may have lacked the confidence to try to learn before.

73,

2912. Re: Hallicrafters SX-42 Value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-01 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <rsrqa3a5j7194@corp.supernews.com>
Source record: 79666

I listen to my restored SX-42 every night and I agree that $300 would be reasonable for the for a clean receiver plus matching speaker. If somebody made me that offer, I'd have the checkbook out before you could say "Bill Halligan." I have seen the speaker alone (model R-42 reproducer) go for as much as $100.

While you have it on the bench, peek into the bandswitch and tone control switch for signs of h-v arcing. That's an Achilles heel in this set. Leaky paper caps can allow B+ onto the switch contacts. Ow!

If the FM is currently working well, I'd leave it alone rather than realign it. Why tempt fate.

Phil

You presume to know what is best for me? Why? That's even funny! You do take what I pursue as a hobby *very* seriously indeed! I entered the ARS (got a ticket) after futzing around with BA recievers as a SWL for years. That's why I got a ticket--so I could futz around with BA transmitters, too, and "beep" back. I am uninterested in new circuits and materials et al. Totally. Had a few late-model radios, still have one, they're OK, <yawn>. I strive in all things for impracticality. You might try it. Yes, it is 1999, so what? If I can't play with My SX-28 and tinker with Grammer and Jones glowbug designs, then I forbid you to eat Baked Alaska, or any other dish that was concocted before 1990! I think the ARS can do without my technical innovation, wouldn't you agree? Obviously, you must, since my technical judgement is so lacking, as you have pointed out

> > Everyone doesn't have to be working on the same projects,
> > with the same goals and methods, do they?
>
> No, but endless regurgitations of the projects of the 30s-50s
> don't serve a very useful purpose. They result in inferior equipment
> and don't teach much in the way of skills/knowledge which are truly
> useful in today's world.

Useful? Useful to who? To me, a Drake R-4B is about the upper limit of what I consider useful in a radio. I don't do any of this because I need to communicate. The old Basis & Purpose argument wont work on me, not at least as far as "advancing the radio art" goes. I think that section in Part 97 ought to be stricken. It's about time, speaking of anachronisms. I refuse to be useful to you, or anyway to your notion of what the ARS and the wide world need done. So, 30, 40, or 50 year old radios and circuits are plenty useful to me. God, save me from any more efficiency!

Clearly we have a gulf between us--HF over here and VHF+ over there. You are quite right to be concerned about spectrum auctions at VHF+. Not so at HF, clearly not at all. I suppose you beleive all hams should be burning the midnight oil in basement labs in search of those VHF+ circuits and techniques which will wow the FCC into not proceeding with further auctions? And we should all be using those bands all the time, even when the propagation and the culture bores us, to demonstrate the bands are needed and used? What I think OM, is that the bird endangered is the ham/pro-engineer who lives above 144 MHz. Us glowbuggers and QRQ guys may be old-fashioned, but it aint our acre LEOs et al are after, is it?

Sure, but as a backpacker known to take 10 day and longer trips 100 miles from even a fire road, I can tell you just how valuable knowing how to get fire out of sticks or rocks can be. When will you get it (and it is obviously not just me singing this song): pragmatism, efficiency and such are out of mind for some hams where the hobby is concerned. That is not why we do it.

And it goes on and on and on (snip snip snip) like that, always back to the same disconnect: we are licensed by the same government authority and often keep company with RF. That is about the extent of what we have in common, in terms of ham radio. Don't change, really, don't, and I promise, I won't either.

2914. FA:Waters-3002 Audio Limiter/Compressor/Phone patch

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-01 00:00:00 UTC
From: Jack <friday2k@pacbell.net>
Message-ID: <37CE0BF7.CFD0CB6F@pacbell.net>
Source record: 79668

Waters Universal Hybrid-Coupler Model 3002. It includes full phone patch capability and in addition, it incorporates the Waters Compreamp, speech processor/limiter in the output circuit. It operates either VOX or Push to talk. This unit will compliment any station especially the Collins KWM-2/2A. If you have no particular need for a phone patch, the compressor/limiter feature itself is a great reason to bid on this unit. Comes
complete with original manual

Not wanting to join in the general fray, but man, that's one heck of a visual. I'm trying to picture some 21st Cent. Desert Warrior carefully loading his tube regen packet radio into his pack prior to evacuating post haste in a sandstorm. Tube packet : two paper cups connected by a billion dollar string. Why not just teach your camel to rollerskate? ;-)

ROTFLMAO! ;-)

Sorry, man, something about that concept just really, really struck a funny bone. No offense meant, if you want one, then I certainly hope you enjoy it. Good luck.

For sale:

Knight-Kit TR-108 2-meter AM transceiver, with
matching V-107 VFO both in excellent condition.
It uses a 2E26 as the final amplifier and a
6L6GC for 15 watts of plate-modulated AM phone.
It runs on 110 V AC or 12-14 V DC with the built-
in power supplies. The V-107 VFO can be
used with either the TR-106 or the TR-108
transceiver. Needs Power Cable.
Will include a spare final tube - sell for
$125.00 plus shipping
= = = = =

Knight Kit P-2 SWR meter in very good condition
with manual.
Comes complete with remote sensing head, cable
etc., and in proper working condition.
Will sell for $35.00 plus shipping
= = = = =

Radio Shack DX-160 Shortwave Receiver in
excellent condition, with matching Speaker.
This is a DESKTOP receiver designed for the
serious listener who wants to spend all evening
hunting rare stations or listening in the
armchair to worldwide broadcasts with ease.
Covers all shortwave bands from
Receives AM, CW and SSB. Radio and speaker are
both in near-mint condition.
DX-160 Receiver, Speaker will sell for $150.00
= = = = =

Heath AM-2 SWR and Reflected Power Meter. Very
good condition. Front panel is very very
good. Case needs cleaning. SWR meter has all
functions working fine. This SWR meter looks
perfect with a DX-20, DX-35, DX-40 or DX-100
etc. Will sell for $30.00
= = = = =

Heath HW-2036 2m FM Transceiver with original
touch-tone (DTMF) microphone for making auto-
patches. Radio is in excellent condition. This
is a thumbwheel switch tuning synthesized rig

that covers the entire 2m band 144-148 MHz in 5
kHz steps. Has built in analogue S-meter,
volume, squelch, Tone OFF-A-B-C and offset/aux
controls. Will sell for $75.00
= = = = =

General Electric model 7-2705A Pocket AM
Transistor Radio in very good condition $25.00
= = = = =

General Electric model 7-2705B Pocket AM
Transistor Radio in near mint condition $35.00
= = = = =

Panasonic 8-track tape player, with cables.
Model RS-802-US in Excellent condition.
No visible head wear. This deck looks almost
like brand new. Plays like new.
No scratches. Beautiful. Will sell for $49.00
= = = = =

EICO 752 DC Power Supply in excellent condition.
Allows the EICO 753 and other HF tube gear to
be run on 12-14V DC supply in automobile.
Will sell for $45.00

= = = = =

Drake TV-100LP Low Pass filter, 1000 Watts in
excellent condition. Copper finish
Will sell for $25.00

Yes.
I remember the good old days, and have hung on to them.
I also explore these great new days.
What I have noticed, is that information was more readily available on the Internet three years ago, in certain specialized areas.
I have also noticed, that control is being removed from the user.

You get up, you go to work, you go home, go to bed.

Then you pay your bills, and buy some throwaway "fun".
Comes the depression, us old dinosaurs :) will still be having fun, and be capable in the real world anytime anywhere, with stuff that's lying about.

So we have the best of both the real world, and the 'real' world as it is perceived by the money-pumpers.
A man never finds time for anything, he must make time.

And another thing.
The technology we use today, has flaws. Go way back to George Maxwell and check. Go back to to those great thinking philosophers which are still being revered today as infallible, and check.

Now piddling around with antique parts and technology is refreshing, when you catch the errors.
Let's use old tech with modern parts? Or remanufacture old components with today's expertise.
Let me tell you, there is a LOT of technology which has been restricted from today's textbooks.
Also, the old technology has not been completely researched due to the manufacturing processes of its time.
Vacuum tubes still have an advantage over EMP-sensitive solid-state materiel.
Vacuum tubes also exhibit a transfer speed in excess of 80 times that of a semi-conductor.
Vacuum tubes carry a nebulous "emotional factor", not possible with even the best solid-state devices.
Computers? I make my own, easy enough with building blocks.
But hey.
The first color televisions still had better pictures than today's fancy monitors displaying a computer generated image.

I go out and buy anything I want. But what fun is that?
I go and find discarded junk, and build stuff.
Sure, I like mathematics, also.
But well, you know.

Analog is strangely enough going to figure very highly in a new generation of computer technology, even as the biological chips will.
The old times are not dead.
Try to go back into the knowledge which was available in the 1800s.
See for yourself how brilliant people were with various sciences, not just electronics.
Try to get the textbooks.
Try to get.
This getting is becoming harder, leading to an almost total dependency on the system.
Hey, I don't want a computer or an air-bag in my car.
I don't want plastic pistons.
And I certainly don't care to work my butt off to get a new car that is designed to rust within three years.
A sewing machine? How many must you buy in your lifetime, while my mother's hand-cranked Singer still works?
My friend's Austin has been sitting in the rain for ages, and doesn't rust.
They used to put a little bit of nickel in the alloy, see.

As for obsolescence, there is far more obsolescence in today's stuff, everyone agrees, not because only the technological leaps are all that great, but because it is designed that the first stuff you get must be replaced.
They already HAVE the stuff made that you'll be buying ten years from now.
But you have to go through channels, and spend money and pay taxes.

I can fire up my tube HF set, and get stations anytime. It's great.
I can twirl knobs and dials, and kind of drive the machine.
My other equipment, I sit on my backside, and push a button on the remote control.
That's all I'm allowed to do with it.
And I'm stuck with the five kHz increments.

On the computers, I can talk to anyone in the world and with video, and no QRM.
That beats ham licenses all to heck. And it is fun.
It is great to have instant and accurate communications.
I love it.
But I also love doing it myself, and succeeding without dependence upon bits and bytes.

If we have an EMP, a lot of us can kiss our recreation goodbye, our jobs goodbye, and our finances goodbye.
I have wealth stashed outside of banks, and it can't be controlled because ostensibly it does not exist.
And I can Build a car from scratch out of junk.
And I can hunt and fight.
I can build transceivers and telescopes, do a fair bit of medical procedure, and a whole bunch of other neat stuff.
But the greatest of these lie in the magical realm of Tesla, Marconi, Fessenden, and myself.

So let's have a toast for the Old Dinosaurs.
We're not a bad bunch, and we'll still be around when digital has to marry analog.
Hans

Exactly right, as a component of analog.
Which is the greater paradigm?

FCC Title 47, Part 97.3(4) defines "Amateur (Radio) Service" as:

"A radiocommunication service for the purpose of self-training,
intercommunication and technical investigations carried out by
amateurs, that is, duly authorized persons interested in radio
technique solely with a personal aim and without pecuniary interest."

In other words, I take issue with the statement that technical service
is the "majority of our Basis and Purpose"; obviously, the FCC
considers self-training (in radiocommunication), radiocommunication,
"personal aims" and volunteerism to be well within the purpose of
Amateur Radio. Certainly, we'll each lend more weight to that portion
that most interests us personally. And isn't that perfectly OK?

Yeh. I suppose you've been brought up to still believe that all electron
movement is at the speed of light, right?
Some reading in scalar physics will dispel that notion in a hurry.

Ah! Very well said. Speaking for myself (and only partly qualified to do that some days, it seems:) it is physics, metereology, astrophysics, chemistry, and geology that interest me, among the "technical" aspects of radio.

I agree with what Bill says here all the way. CW, tubes, QRP, wire antennas, crystal control, these things teach me oodles (there is a nice precise, technical term!) about radio, and by extension about the atmosphere, the Sun, geomagnetism, erosion and deposition (a la diffraction at VHF, ground reflection and absorption, etc.), oceanography (propagation over salt water) and on and on.

Perhaps I will someday get to a level of understanding and design/construction proficiency where I can suss and enjoy VLSI. If I do, I will arrive there via 1,2, and 3 tube DC and regen receivers and MOPA or Hartley transmitters. Of course, there is the honest pride and satisfaction in building (even designing, which I am *now* getting to be able to do for the above) my own radios. Though my little blooper doesn't catch the DX my R4-C does, I built it (design is my modification of an ancient one by George Grammer), and with the aid of others I got it working at its design potential, so that now I much better understand what is going on inside my R-4C and why it is a better receiver.

I get the idea, and that is fine. I even believe you, though I have little idea beyond a dim understanding of what you are talking about, technically speaking. I won't deny you your pleasure and satisfaction. Neither will I deny your work, amateur and professional, may have economic and social value at large. It probably does. Just don't attempt to deny me and others who are years behind you, by some combination of preference, talent, and training, our small happiness. Everyone doesn't have to be working on the same projects, with the same goals and methods, do they?

You mentioned relevance and value several times in this thread--Relevance to what? What sort of value? I commend your dedication to innovation and development of radio technology, I do. Clearly it is valuable to you, and such activity has much economic value as well. What I and some others value about hobby radio has little to do with new technology. I have no formal training

or education in engineering, RF or otherwise. Exploring and learning a little science and antique engineering, via technologies that are relatively simple and static, has ultimate value for me. Likewise, exploration of the social history of technology has supreme relevance to my work as a college teacher (of English composition, creative writing, and literature) and as a "literary" writer. Plus, I find it fun. Don't know quite why, don't care to know everything :) Forgive me, all, for even mentioning the term, but this thread rings a bit of the ceaseless CW debates. Can't we all just get along? I won't force CW and simple valve circuits on you, nor claim vague quasi-spiritual benefits accrue from them to all (though you will pardon me if I say that in some small ways both 'antiques' intimate to *me* the esoteric and sublime). What I keep forgetting is that it is a hobby *&%$-it, but for some it is also their actual profession, so that makes us somewhat like two Spaniards--a Catalan and a Castillian-- yelling at one another, each uncomprehending the other, claiming to know the only way to be Spanish.

The following handbooks are for sale for the price indicated plus shipping charges:

1933 10th edition first printing; In nice but used shape - $40

1934 11th edition second printing; Complete with covers but some water damage, back cover in poor shape and first page is partially stuck to front inside cover. Still good copy and contents in good shape - $30

1936 13th edition second printing; Some taping on covers but in general a good copy - $30

1938 16th edition first printing; No covers, tape over spine, contents good - $10

1942 19th edition first printing; Cover is rough especially along spine, contents good except few first pages has a piece of the lower corner missing - $15

1942 As above; with opaque tape over spine, contents good - $15

1943 20th edition first printing; decent shape - $15

1943 As above but nicer overall; with tear in cover and most of cover is separated from the spine - $18

1944 21st edition first printing; scotch tape on spine, cover separated from spine, complete - $15

1944 As above, and about the same overall condition - $15

1948 25th edition; scotch tape on spine, fair condition with good insides - $15

After these go I'll put on later years, or inquire if you need later years and I will provide a quote. thanks & 73 - Mike

That is still not the same thing as breadboarding a circuit (like a simple DC mono-band receiver, for ex.). You can visualize and conceptualize till you're blue in the face, but especially where fundamental principles or concepts are concerned, there are things only learned well and throughly where a strong element of experience/eperimentation is involved. I suppose that is why there are lab sections along with chemistry lectures, or why you build a prototype before your company invests in production of doohickey n.

That is right. A survey of the history of technology will demonstrate with frightening clarity how quickly the terms of the deal go from the machine serving people to people serving the machine. It has happened with every significant mechanical or electric/-onic device developed since the optical telescope. The good news is that we can find our own way out of this maze if we want to. I think it has to be an individual effort. I am trying, steadily simplifying my life discarding the trappings that don't hold true value.

Nostalgia, where it is active and thoughtful, isn't really nostlagia or 'retro' at all. For many of us, I see a keen interest in morse and simple, mainly valve technology as a technique in applying (self-medicating as it were) the method of escaping a future foisted upon us by taking the side-door out through the past. . .By reducing and simplifying our means, the *how* of our lives, we can clarify and have the real opportunity to choose the *what*--what we do, where we live, who is around us. For me, boatanchoring and CW-only (and 5% AM, that mostly 10- and 2-meter) is fun anyway, but shows me again and again how little I need, and how much of what I do with my life, how much of what I have is truly disposable. Take out the trash and have a nice life!

Ken,

Here are a couple of parts sources to get you started. These outfits have the added benefit of stocking quite a few books on radio--history and technical.

Name says it all: http://www.tubesandmore.com/

Air variables: http://www.cardwellcondenser.com/

Surplus goodies and parts: http://www.fairradio.com/

Tubes, sockets, etc.: http://www.electron-valve.com/

Coils: http://www.bwantennas.com/coilcat.htm

New and NOS parts, all types: http://www.oselectronics.com/index.htm

Transformers: http://www.pwdahl.com/

Crystals: http://www.icmfg.com/

Ferrites: http://www.bytemark.com/amidon/

A list of more sources: http://www.repairfaq.org/filipg/LINK F_mail_order4.html

New parts, a lot of hard to find types, cheap: http://www.fix.net/dans.html

Lots of amazing parts and surplus: http://www.surplussales.com/

You will definitely find the tuning cap and sockets you seek at *several* of these places. You'll also find a bunch of good books, esp. at AES and Ocean State. Most of these outfits still have print catalogs free for the asking (via email if you like). All of them have links to more sites, of course. Good luck, and happy homebrewing!

> transmitter isn't the same as the ARC-5....

The Command Set transmitters come in several "flavors,"
all of which people sometimes incorrectly lump under "ARC-5."
The ATA/ARA units and SCR-274N (BC-4xx, -696) units are
nearly electrically identical and will fit and work
in each other's racks. The later AN/ARC-5 units
are different in several ways,
including a different power plug with different pin-outs.

Transmitter Plug Pin-out:
(Note: If yours has an octal socket or anything
other then the 7-pin Mica connector,
then it's a modification and all bets are off.)

For AN/ARC-5-
There are seven pins. The pin in the center is
pin #7. Locate the pin that is grounded
to the chassis. This is pin #4.
Count the others *clockwise* around accordingly.

1. No Connection
2. +200VDC for the Osc. (needs to be right for stability).
3. Keying Relay (ground to key).
4. Ground.
5. A+ 24-28 VDC.
6. PA Screen Voltage (use 20K 5W dropping res. from B+).
7. PA Plate B+ Voltage +550VDC (not critical)

For ATA/ARA and SCR-274N:
There are seven pins.
The pin in the center is pin #7.
Locate the pin that is grounded
to the chassis. This is pin #1.
Count the others *clockwise* around accordingly.

1. Ground
2. Test point for PA grid current.
3. +200VDC for the Osc. (needs to be right for stability).

4. PA Screen Voltage (use 20K 5W dropping res. from B+).
5. Keying Relay (ground to key).
6. A+ 24-28 VDC.
7. PA Plate B+ Voltage +550VDC (not critical).

COMMAND SETS, SCR-? ARC-?; By Dave Stinson
(Copied to the list for general information.
Updated with the latest info as of Aug. 1999.)

>...You said that the Navy Transmitters were different beasts....

The Command Sets come in several "flavors,"
all of which are sometimes incorrectly lump under "ARC-5."
Here are the main production "ARC-5" style Command Set units
from earliest (1940) to latest (1945):
(NOTE: This list does not cover the first production
units that are in the familiar "Command Set" form-
the RAT (1938) and RAV (1940)-
because they were not "Command Sets"
but surveillance and liaison receivers.
They're a story in themselves.}

Aircraft Radio Corp. Navy ARA (rcvrs) and ATA (xmtrs),
1st generation. Black paint, blue label on top.
Accessories uncommon. 7-9 MC TX rare.
Later subcontracts by Stromberg Carlson.
I haven't as yet researched the contract numbers for ATA/ARA.

Aircraft Radio Corp. U.S. Army Signal Corps,
First production run early SCR-274-N.
Black paint, black-and-silver plate on top.
Initial production run for the Army Signal Corps.
The contract (1470-NY-41) was for 4000 sets
delivered in November 1941.
Rare unit note:
While all the Aircraft Radio Corp. Signal Corps SCR-274-N sets
are rare, one deserves special notice.
The BC-696-A 3-4 MC transmitter for this version was
added to the contract later at Signal Corps request.
It is unknown if any were actually built by A.R.C.
The next run of 25,000 sets under this contract
was scheduled for delivery in May of 1942.
The job was subbed-out under a new contract number
to Western Electric and included a BC-696-A.

Western Electric early Army SCR-274N.
First W.E. contract of 25,000 sets (1509-NY-41)
was for delivery in May, 1942.
Later contracts New York 1941 and Philadelphia 1942.
Black paint, black-and-silver plate on top.

Rare unit note:
The BC-696-A 3-4 MC transmitter for this version,
which may have been the first BC-696 actually built,
has a small nomenclature plate fixed to the top
cover with two screws.
There is no contract number on this plate,
nor is one stamped on the back skirt.
The original rivet holes for the large plate on top are present.

Western Electric Army middle-run SCR-274N. No contract
number on the nomen plates, although it's sometimes
stamped on the back in yellow ink.
Black paint, black-and-silver plate screwed to the side.
More common then the early sets,
but less common then the unpainted ones.

Western Electric SCR-274N VHF set, contract 7461-WF-43.
Looks the same as the very common T-23/R-28 ARC-5 sets.
This set fit the SCR-274N racks.
Approx. 1000 sets were produced, but the Army was
in love with all things British and the SCR-522
remained dominant. Rare.

Aircraft Radio Corp. Navy, ARA (rcvrs) and ATA (xmtrs)
2nd generation. Black paint, blue plate on top and
red tuning plate on the bottom left of the front panel.
Uncommon.

Aircraft Radio Corp. Navy AN/ARC-5. First deliveries late 1943,
but did not became commonly installed until early 1945.
Black paint, Blue plate on top. Blue tuning plate on bottom
left of front panel. Subcontracts by Stromberg Carlson.
Units from very common (R-23) to very rare (T-15, T-90).

Western Electric Army SCR-274N.
Delivered late 1943 to war end.
No paint. Black and silver plates on the side.
When supplies of brass grew short during the war,
nomen plates and notation plates were often replaced
with either fiberboard or wet decals.
Most common type. BC-453s of this type most
common of all "ARC-5" Command Sets, about 400,000 having been made
according to contracts unearthed by Gordon White in the 60s.
Subcontracts by Colonial Electric.
Colonial did almost all of the BC-946 BCB receivers,
but they also produced a few complete SCR-274N sets,
parts of which are uncommon now.
Rare unit note:
I have one Colonial BC-946 (BCB receiver)
that is painted black wrinkle. Check of the circuit
confirms it is a 946 and not a "tricked-up" BC-453.
Anyone else ever seen a painted one they could confirm?

Aircraft Radio Corp. Navy, ARA (rcvrs) and ATA (xmtrs)
3rd generation. Black paint, blue plate on top and
red tuning plate on the bottom left of the front panel.
Unlike the 2nd gen. units, these were built in the
later "AN/ARC-5" cabinet style with the
screwed-on tuning coil window. Built as
replacement units for ATA/ARA installations.
Rare.

There are many other "special cases" and small
production runs, including some late production
BC-453s and an R-23 "A" model built as replacements.
There were also a few production runs
for the commercial airline trade after the war
(extremely rare- never seen one).

This is an evolving document, with additions
and corrections added as new information is discovered.
Your additions/corrections/arguments welcomed.

2945. Jittery VFO in SB-102

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-01 00:00:00 UTC
From: Robert McCown <robertmccown@worldnet.att.net>
Message-ID: <7qjfuohag1@bgtnsc03.worldnet.att.net>
Source record: 79731

Hi. I've purchased and tuned up a circa 1971 Heathkit SB-102 which works well, but there is a small problem. When I tune across the band there is noise (apparently) in the VFO and the VFO jumps 50 to 100 Hz. when I touch the tuning dial. This occurs on all bands.

Does this sound like a problem in the mechanical linkage or a dirty VFO mechanism? Dare I open the VFO box (the warranty is obviously was our of date) to clean the mechanism/capacitors with a spray contact cleaner? Suggestions welcomed.
Thank you

Bob KB0KFA Wichita KS

: That is still not the same thing as breadboarding a circuit (like a simple
: mono-band receiver, for ex.). You can visualize and conceptualize till you

For me, part of it is a matter
of scale. Running me flingers
along the wires, I "see" where
that cap or diode does its job.
It's oddly like being a human
signal tracer... "Here i am,
AF, RF, yup, here's where the
DC bails,..." It may have to do
with (forgive me, Pestalozzi,)
"learning styles."

I can link-up tinker-toy blocks
of IC sub-units, but something
about it is not satisfying in
the same way. We all adapt to
the extent that we must, but I
feel the same vague unease when
grabbing a chunk of code from
a software library.

.

> Vacuum tubes also exhibit a transfer speed in excess of 80 times that of a
> semi-conductor.
>

Ummmmmm..... Don't get me wrong, I agree with a lot of what you said, or at least what I think you said. But having done my masters paper on the break down of magnetic domains in high saturation metels under large EM pulses I had to work a lot with solid state theory and k-space transfer. Just exactly what to you mean by "80 times" "transfer rate"? Whether your talking about electron transfer in the valance band or end point emmision you've still got electrons traveling at about 70 times the speed of light. Now I realize that differences in packet speed and particle speed can boost transfer to over 1.6 times the speed of light (free space) but I have a problem with 70 times SofL. Now if you are refering to "Hot Electron" theory then your transfer gain can be increased due to the "excitation pool" but only by a few femto seconds when compared to most semi conductors. This still leaves you far short of "80 times". As I said, I may be missing what you are refering too. If so, could you elaberate on the theory?
Rick

{lot's of good stuff from Will snipped}

Thank's Will, you've put into words pretty much how I feel. I've been designing embbeded computers for 12 years now but I am a novice when it comes to radio (in fact I'm still waiting for my novice licence to come from the FCC). Why novice and not technician? I prefere to work code. No "nastalga" here, I just prefer code. I'm teaching myself by building tube receivers and transmitters (and asking a lot of questions on this NG). I work all day with ICs. CPUs, DSPs, ADs, DAs, DSS, 74s and 40s, Switchers and Mixers, bandanglers and ventuslers. If it's got letters instead of a name, I know how it works and I can program it.

So why work with tubes? Well besides the fact that I had a lot of them laying around from when I was a kid I like the simplicity of tubes and the fact that I can see the electrons "move". I am not at a point where I can design a packet xcvr yet, I need to build my fundamental knowlege and skills. When I looked into building my own stuff I tried both solid state and hollow state. Tubes offered, for me, an easier to understand approach with a more "hands on" feel. Any one who say's you cannot learn from "obsolete" technology has obviously never felt the thrill of hearing code coming out of a simple one tube regeny that you built yourself for the first time. My regeny didn't work at first and I had to dig into the theory and specs on the tube and the circuit, with a lot of study and even more help from the guys on this NG (they are helping with my transmitter, very relevant to how the RX works). I was able to experience that thrill a week ago. I could have taken the solid state approach and probably would have learned as much, but maybe not.

Some day after I've learned a lot more and worked for my General Class licence I just might build that Packet tranceiver. Will I build it from tubes? Probably not, but what a challange it would be. And I should hope that I don't have a self appointed techno-task master berating me for my choice of technologies. After all, it is my choice.

Rick

No offense taken as I ment it with tounge in cheek. Kind of reminds me of Back to the Future II when the '55 version of Dr. Brown had to reconstruct the microchip from tubes and coils. They show the Delorian driving off with 3x2 foot bread board of tubes on the hood. Now that was funny.

>that is painted black wrinkle. Check of the circuit
>confirms it is a 946 and not a "tricked-up" BC-453.
>Anyone else ever seen a painted one they could confirm?

Dave, I have a "946" type unit, black crinckle, no name plate, but Navy anchor no rear. Was converted in past with SSB modification, but looks restorable to original as no extra holes (except aux plate on front) and all sockets/plugs still there.
Also says "Aircraft Radio Corporation" on back, with a '43 date code.

Did overseas theatre aircraft ever have the 946 freq coverage installed, or were they all for costal/trans-oceanic use (navigation using AM broadcasters as beacons)?

Sounds like a typical problem with the LMO. I had the same on my
102. WhenI queried the net for help, the best advice was to take
the LMO out (ouch!), remove the cover to access the internals and
clean the variable cap pivot points, using a short-bristle flat
brush soaked in isopropl.

It fixed mine.

I used a burnishing tool to do the same thing about 9 years ago. No problem since then on my SB400 LMO.

(Newsgroups edited)

This has got to be one of the oldest threads in ham radio.
I'm reading letters to the editor in a 1923 QST and someone
is bitching about the guys who don't build their own stuff!

My brother is an archeologist working with SE USA aborigine sites
and has found glyphs strings on soapstone. 3,000 years old,
depicting the man who doesn't grow his own tobacco and
make his own pipe as a slug ;-)

Hey, anyone got any sockets to fit WE 231D?

Have a dozen 7027A. They are used but I don't have any
use for them so if anyone wants to swap some older transmitting
tubes that have good emission for some good used RCA 7027A's
send me some mail.

-bob

2972. Re: "ARC-5" Command Set Lineage.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-02 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37CEE06D.73869253@ix.netcom.com>
Source record: 79609

> Dave, I have a "946" type unit, black crinckle, no name plate,
>but Navy anchor on rear.
This is either an early Navy ARA type CBY-46145
(one made by Stromberg Carlson would be "CTT-46145")
or an R-24/ARC-5. If it has a 12SF7 tube in it, it's ARC-5.

The BC-946 was a part of the Army SCR-274-N sets.
Which ever is the case,
it is a desireable set to collectors,
assuming the chassis hasn't been drilled.

> Did overseas theatre aircraft ever have the 946 freq coverage
>installed, or were they all for costal/trans-oceanic use
>(navigation using AM broadcasters as beacons)?
Actually, the BC-946 and ARA Cxx-46145 were only rarely used
for BCB navigation. The dials marked for the BCB
that go on the remote control boxes used by the pilots
are very rare- I've only seen one and I gave it to Mike Hanz.
The BC-946 and Cxx-46145 were produced to work with the
Navy-originated "ZA" and "ZB" navigation systems, in which
they were a tunable IF. The ZB nav receiver was powered
throught the large aux. plug that was originally supplied
for the front drawer. The system was used in all services
during the first half of the war. It was replaced in
Navy service by the ARR-1 and ARR-2 units, which were essentially
the same circuit all in one box. The Army had the "ZB" system
but tended to rely more on the old-fashioned radio range navigation.

2973. Announcing eHam.net

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-02 00:00:00 UTC
From: W4AN <w4an@eHam.net>
Message-ID: <XKBz3.2720$Dj2.173009@monger.newsread.com>
Source record: 79610

Amateur Radio finally has its community site in eHam.net. On September 1, 1999, eHam.net opened its doors at http://www.eHam.net. eHam.net can best be described as a community of ham radio operators from all over the world. These ham radio operators share ideas through chat, contribute news articles, buy & sell, take practice exams, get propagation information, DX spotting, and a variety of other applications designed for hams.

eHam.net Features (version 1.0)

1) Callbook - More than just the FCC data, it also includes interesting personal notes submitted by each person.

2) DX Spots - Spots from around the world with one click access to QSL manager and callbook info.

3) Classifieds - Buy and sell your ham gear here (it's free!)

4) Ham News - Latest ham radio news with an opportunity to post your comments on each story.

5) Chat - Chat with hams around the world. Hold club meetings. Meet people here for on air schedules.

6) Ham Exams - Exams automatically generated from the FCC test pool. Take a test and see your graded answers immediately.

7) QSL Managers - Find the fastest way to get the cards you need.

8) Propagation - Why wait for WWV when you can get up to the minute data from NOAA.

9) Survey - Answer the question of the day.

10) Speak Out - A lively editorial forum for comment on ham radio topics.

11) eHam Detective - Search ALL ham radio mailing list archives on the web. Not just contesting.com.

12) Ham Spotlight - Each view of the home page includes a profile of someone from the ham radio world. Every time the home page is refreshed, the spotlight changes.

3) Links - On every page of the site you can type in a keyword to search. The site has over 2500 different ham radio links already. By far the biggest and best colletion of ham links on the Internet. We also have a rating system for each link entered. The eHam.net community can rate any link from 1 to 5 stars!

14) Friends Remembered - A place to remember SK friends. It occured to us that a callsign listing in the pages of QST magazine just wasn't enough.

15) Product Reviews - Review any ham product you own or come here to read reviews about products you are considering buying. I know a couple of companies that will hate us for putting this one up!

73 & thanks for your time & consideration.

Bill Fisher, W4AN

2979. Re: Dentron HF-200A Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-02 00:00:00 UTC
From: Tim <ka8ddz@worldnet.att.net>
Message-ID: <37CF031D.F8C90465@worldnet.att.net>
Source record: 79616

Well Doug if you have one in good shape then you have a rare one. Dentron didn't make very many of those at all, they sold for somewhere around $650 back around 79/80 I think and I don't think they made any money on it. If your interests lie in SWL'ing and BCB DXing you'll be disapointed as that rig is a ham band only reciever and NO AM..

The radio used a popular IF board commonly referred to as the "SG-9". The SG-9 board was basically a fully functional 9MHz transceiver just add an L.O and VFO then add the appropriate filtering for each band and voila your on the air. I believe Atlas used the same one in some of thier radios. As a starter rig or something to get on the air with, sure it works and will net you plenty of contacts and if your interested in using it for code practice it will be an excellent rig to learn with and you will soon appreciate what it means to have IF filtering for 250,500, and 1000Hz since this rig has no selectable filters just the standard 2.4 Khz. If your operating in the Novice bands get yourself a good 50Khz marker generator so you know where you are that dial. With 10m up and down you should net some good DX contacts too.

Have fun,

Tim ka8ddz

Sorry Hans, nosale. Back up your statements with numbers and science please. Just what is "a whole
lot faster".

The time issues with B&W vs. color has to do with how the human eye response to light stimulus and
the fact that color tv's incorporate 3 electron guns instead of one and the added amount of information needed to be decoded by a color tv. It has nothing to due with your unfounded statement
of "black and white is a whole lot faster than color". I am of course assuming that you are refering
to the actuall EM propagation.

.H .H Russell wrote:

> I really can't do the math anymore.

Really? I havn't pickup a physics text in ten years. One of the other engineers here had his
freshman text so I just barrowed it and solved for the vacuum tube over my lunch hour. The math
is pretty simple, algabra only and all classical. I should think that you could do simple algabra.

> I just did. Sound and EME are not mutually exclusive.
>

I got a whole floor of physicist a mile away from me who say your wrong. I can give you names
and addresses if you wish. I prefer the consol of real people and not "this scientist on a web
site says".

> It is definitely what I had in mind.But the math, I would have to study for a year to bring
> it all back.

Hmmmm.... took me about half an hour. Really now, is algabra that tough?

> I won't use incomplete bits and pieces if do calculations, and some of these
> calculations won't follow accepted standards.

They better if you want any one to take you seriously.

> So it is better left to you youngsters to find a way to make my statement true.
>

Sorry Hans, your theory, your proof. Put up or shut up as they say. BTW you cannot "make" a
statement true. It either is or it isn't. That reminds me of the church in the dark ages. They
new that the earth revolved around the sun but for social/religious reasons they keeped it away
from the common man and went so far as to persecute Gallilao. They "made" thier untrue
statement "the sun revolves around the earth" true. But it still didn't alter the fact that the
earth revolves around the sun.

> By the way, there is a perspective which would be called cheating by some, but in that
> perspective you enter three-dimensional mathematics.

Hmmmm..... I studied n-dimensional math and tensor calculus, I don't recall seeing anything in
the nominclature about "cheating".

>
>

Okay, here are the numbers for the tube

I will be using F=ma given by Newton in his Pricapia (SP sorry Issic) and the following:
E=F/qo (eq. 18.2) where E=electric field in N/C, F=force, and qo= charge of the electron
E=V/d (eq. 19.7) where E= electric field, V=applied volage, and d= the distance between two plates.
and d=1/2at^2 (eq. 2.8) d=distance, a=acceleration, and t=time
The last three can be found in Cutnell and Johnson's 3rd addition of *PHYSICS* published by Wiley in 1995.

So assume we have a triode tube where the plates are .5 cm apart and we have an applied voltage
of 200V. I think these are reasonable paramaters.

Then by 19.7 we have

E=200V/.005m=40,000 N/C

sub into 18.2 gives

F=Eqo = 40,000 x 1.602xE-19 = 6.408xE-15

now sub F=ma and we get

a=F/m = 6.408xE-15/9.109xE-31 = 7.0348xE15 m/s^2

now by using d=1/2at^2 we get

t=sqr(2d/a) = sqr(2x .005/7.0348xE15) = 1.19xE-9

or about 1.19 nano seconds.

I have of course, not taken into account the setup time of the the E field after the grid potential is dropped nor have I added in the slew rate of the grid drop. I merely assume that
the grid drop is instantanious and that when the electrons strike the other side they will immediatly began "energy transfer".

Now I have decided not to do the math for the semiconductor since it involves quantum mechanics
and if you can't do algabra I don't think you'll follow the math. You could just say that I'm
"cheating". For those that are interested the flow of electrons in a semi conductor is discussed in detail in Omar's text Elementary Solid State Physics published by Addison Wesley.
I used the first addition published in 1975. I will give a short discription though.

In order to conduct, the electrons in the valance shells (valance band) of a semi conductor must absorb enough energy to make the jump into the conductance band. The distance between

the
the two bands is not physical but electrical in nature and is know as the Energy gap. It's value is given in eV and for Silicon the value is 1.1eV. The time that it take for the electron
to make the energy jump can be calculated like all energy state shift. Any one interested in
these calculations are refered to Kenneth Krane's, Introductory Nuclear Physics, published by
Wiley. It is known that these jumps take place in the sub nano second range and once the jump
is made, I am assuming, as I did with the tube that flow begins when the electrons jump from
the the valance band (cathode) to the conductance band (anode) (I could be wrong about the cathode/anode direction, I always get them confused).

In other words the time it takes to get conduction or "energy transfer" within a semi conductor
is in the sub nanoseconds. Of course this works on a quantum basis and therefor it must be treated statisticaly since not all electrons make the jump at the same time.

At this point since I did not do the complex math you may be temped to call me a cheater. So
instead I will point to an imperical proof. Go to Pericoms web page and down load thier PDF file ps2011b.pdf. You will find a data sheet on the 74FCT240T line driver. If you look at the
switching characteristics you will see that the propagation delay time from off to on for any
given gate is a maximum of 3.6ns.

In other words, from the time that I apply a volage on the input of a gate it will take no more
than 3.6ns for the electrons to flow.

I offer this as my proof.

Your original assumption was that a tube could provide transfer rates 80 times faster than semiconductors. I submit that the difference is actually about 3 times faster using the best
case senario for a tube and the worst case for a semiconductor. At this point I would ask that
any one out there who has a really fast digital storage scope could test actual conditions by
getting a suitable high speed transister and a triod tube and actually measure the time it takes for current flow vs gate on for the transister and grid drop for the tube. Real world proof would be interesting.

If you don't agree with my math or my statements then please feel free to refute them, but please do so with hard science and good math, not with "some scientist on a web page says".

Ah, you write like Don DeLillo, Jr. . .See me, as I whiz along the empty Interstates in my 1965 Impala SS (with a Hurst, and sorry, no Q-Jet, got an AFB when the 327 got rebuilt. . .) Here is a picture of me sending QRQ CW via the dash mounted MAC bug, and the Gonset mobile rig. . .[jpg] Oh, wait, there goes my great-uncle Fil in his 1946 Hudson pick-up (Hudson green), with the CE 100V, crystal box on the hump, tuning the homebrew HF converter hung off the dash AM radio. . .ah, Y2K was wonderful, for those of us who didn't go with the Pleiadeans when they landed. . .Isn't that an Ethel Merman song?

So attention, Rick Haub!
Here we have empirical proof that the speed of light is not absolute, and certainly therefore by
the law of commutation and the axiom of permutative stabilization, also not those pesky electrons.
To wit,
Black and white is a whole lot faster than color.
White is light, and color is light.
Yet there is a difference.
Now consider, if you will, that black is commonly thought of as the absence of light.
But is that really true?
Black may be filled to the brim with colors which escape the human eye.
Just horsing around here. But Einstein did say that imagination is more important than dentures,
did he not?
-Something like that.
Thanks for the come-back, Roy!

Hello. I hae to reply to this...I have two boys 8 and 11, and neither has any interest about dads radios. And to be honest I think I know why. It is such a rush rush competitive world we live in, and todays and tomorrows technology is pushed on them, whether we realize it or not, that they have little time or interest to learn about yesterdays. They know they have to be proficient at computers to make a living in the future. I have been a ham since 75 when I was 15, now an extra for 14 of them. Unfortunately I feel my generation will see the end of the amateur radio hobby as we know it due to the decreasing numbers. Not sure what Uncle Sam holds for us down the road a ways. Makes me sad....but I don't blame the kids.

Here's the scoop, one way I see it.
Nowadays, we have state of the art SWL radios.
So something goes wrong.
The fix?
Plug in another IC.
If that doesn't work, plug in another complete chassis.
Finally, just buy another radio.

All told, the old guys have been there, and they are here.
The newbies are only here, and don't even know what a pornograph is.
They've never seen one, so they don't believe in wax cylinders being played on a wind-up machine.

They've seen CD players. And know all about them.
So do the old timers.
There are so many ICs in there, numbers so and so.
Same with cell phones.
Just look in the book and quote numbers like mad, the way we used to do about Hemis, 327s,
quadrajet carburators. Four on the floor! Hurst shift!
Wow.
Today? Aim the remote control at the car and it starts for you.
Stuck? Call the automobile assn.
Everything is throwaway.

Now, WE know how to actually take a Mason wide mouth canning jar, and build some structures inside, evacuate the air, and rig up a thousand Watt transmitter post-haste, using coils from the vacuum cleaner and home-made condensers.
The thing can be fine-tuned against spurious emissions, or just left however it works in an emergency to save a life.
And no cell-phone will function anywhere nearby, in that case.
Not a good idea.

But the things that can be done.
And then we can always go out and buy the same darn stuff the young whippersnappers do, anyway.
So we got both.

We can BUY what we can't figure out.
But can the contemporaries purchase a regen that easily?
Oh, boy! Did you know that the Military is using tube transceivers as back-ups, just like the Russians do?
Some kids today seem to be walking pincushions and porcupine lookalikes.
Paintbrushes in the biggest pants made.

At least the visible ones on the corner by the pop-shop.
The intellectuals are social outcasts.
The druggies don't care about nothin', man.

The city I'm in for five years, has plenty of kids.
They're all good.

But some of them, you know are going places.
I have not found even a single one, and I've been looking, which seems to be even remotely interested in anything other than to feel cool and find money.

Most of them are alright until they get to school.
Then very rapidly they can change forever.
I read about the process in Karl Marx's Communist Manifesto, where he goes on about planned decadence.

The kids who did make decent marks in spelling and grammar, went on to succeed in college and university, where soon they were given passing grades.
Some few of these still don't know nothing.

Everything taught today is engineered only toward one bottom line, and that is efficiency in money-pumping for someone else.

There are the cream of the crop, who actually understand what they were taught.
And these have much more to learn, but don't think so.

One in a blue moon graduate continues to actually think for himself, instead of parrotting pet phrases.
It is this rare creature, who might very well be interested in learning things considered archaic.
That is, if he can find the time, which is unlikely with the system we've got.

There are recruiters roaming the schools, looking for candidates to serve their agendae.

How many people actually escape all the traps?
Probably none.
The system is very efficient unto itself.
It is an entity, a monster.

Work, and you shall have toys.
Get sick, and it's off to the abatoir.

So with so little to to look forward to in life, I can't blame all the kids, not really.
I get so pig-biting mad, when I stop to think about technology.
It has advanced tremendously, yes.
But it serves finance, and that is all.

Remember, all you old guys, the promises about labor-saving devices?
The American Dream?
A hot rod Chevy which didn't crumple up if you looked at it?

Real American products, made to last.
Good old American know-how.

Could we get a Cadillac with a Mitsubishi engine back in the fifties or sixties?

We've come a long way.
And of course, to those who haven't experienced the past, everything is great,
and right how it should be.
Where are my dentures.
A while back you could get porcelain teeth in dentures.
Today they talk about it, but give you plastic chiclets.

Ever notice how more and more is said about less and less?

Now I am listening to Radio Hilversum, and tinkering away building a hyperspace
window with which to save the world from the Dracos.
I guess . . .

It is nice to be retired, for the time it gives one.
It is nice to be single and not dependent upon the goodwill of associates.
It is nice to be able to go out and buy anything you want.

Life is good.
And we made it that way.

Hans

Wait til I get offa my rollerskating camel and wind up the string of my packet kit.
Okay. You must be a skateboarder, right? sensory surfer-
Here is the scoop for that question, which you can verify.
I put out an idea on my website three years ago, regarding a concept I came up with way back before you were even a glint in your pappy's eye, that is 1988.

The Trifilar Diamond Laser weapon.
Something told me to take it off "post haste", and I did.
Just last week I came across an article on the Net describing the strange tubules found within diamonds.
Think on that, and you'll see I was not very far off the mark.

As to your question perse, the phenomenon is valid and can be verifies, which I'm not going to do for you.
As to making money, I don't need it.
And as in regen receivers, hey. It is more fun to lie still for eight hours peering through a scope, waiting for the target.
I can still plink, if you have any idea what that means.
But killing is a waste of time.
Besides, it's illegal unless the government has a war.

Pretty well at any time, there are 84 wars going on in the world.

Not a pretty pic.
Chiao.

Just finished a little nap, and thinking about your question some more.
Getting filthy rich isn't my idea of time well spent.
Making rifles like those you refer to, would amount to the point being made in all these posts.
It's just no fun.
Press a button, ten deer bleed to death for your pleasure.
Yuck!
The way we used to do n the old days, was to strip naked and put a knife between our teeth.
Then we'd lie in wait for the deer.
When one came, we'd chase it down on foot, and kill it.
That was fun for sport and food. But as we grew older to say about sixty or so, we'd have to resort to rifles.
And then only to eat, since the running sport was out of the picture.
Breath control can be very important in many areas. Good to learn and practice.
Trigger control is something my concubine is muttering about.
Perfect sight pictures were found on TVs when they were first produced.
The natural respiratory pause and breathing control were not mandatory for an adept.

I used a Weller soldering gun for years, and ended up being able to shoot a rifle or pistol without sighting.
I would hit the target every time. Wherever I looked, that is where the lead landed.
That is called "plinking".
Clocks are time machines.
But the kind you mean do exist.
Not for killing perse, but for travel.
You'd have to understand 3D math to grok that precept.
The Philadelphia experiment and the Montauk Project were real, and in fact Montauk has been revived in the last few years.
Has to do with the time loop we're stuck in now.
The world has already ended and vanished along with 'heaven' and everything else in this dimension.
We're still here, most of us blissfully unaware of the countless repetitions we've already made of our lives.
The push is on to break the time loop and enter another dimension with the so-called help of the Dracos.
The Dracos won't help us, they help only themselves, to us as their snacks.
So you may be in your last cycle, finally.
This conclusively proves that we are ALL old-timers, even one as young as yourself.
You've done this trip many times, and are probably well over four thousand years old like the rest of us.

The only way to escape the finality, is to use my hyper space window.
But everyone laughs, doesn't care much.

Strange.

They will, of course, no longer need hams.
The computers will connect to any radio station anywhere, and give you perfect reception and transmission.

This is a nice compact antenna tuner from the KWT-6 transmitter. It is very light and extremely well built. Uses a combination of fixed and variable capacitances along with a nice roller inductor. Front panel has the same multi-turn knob as the KWM-1. Is rated conservatively at 100 Watts Carrier (AM/CW key down) which translates to about 175 Watts SSB.

The cabinet has been repainted (black), feet have been added and a ground post has been mounted in a spare hole on the rear panel. These mods are 100% reversable if desired.

Price is $125.00 plus UPS. If interested please reply by e-mail.

73,

Michael Crestohl

One HX-10 CW/SSB/AM transmitter. (See
http://www.heathkit-museum.com/ham/hx-10.html for complete info). Front
panel near perfect, cabinet top has some scratches, generates 100W on 40
meters, other bands less. May need alignment, etc. I don't have a book
but copies are available. The HX-10 is very heavy (~95 pounds), so
shipping is just not worth the hassle. I am located in the southeast
(Detroit) Michigan area. I may be bringing this to the Findlay Ohio
hamfest. Price is $100.

Aaahhh, yes Hans, exacly the response I expected from you. Now that you've been cornered your rhetoric
is your only defence. You know I agree with you about the value of imagination. Imagination is the
door to inovation, it is the "what could be". But between "what could be" and "what is" is a large gap
of truth. These truths must be discovered and laid bare. The gap can be spanned and the men who do it
use the tools of math and known principles of physics to build the bridge. They use the references of
the men before them like Archimedes, Newton, and Einstein. Those equations I used where not mine, they
were Maxwell's, a revered man of science, not "this scientist on this web site".

If you want to place your ideas out in a public forum for all to see, fine, go ahead. The other
engineers here have gotten quite a few laughs from your latest post. As for me the entertainment value
of an intelectually frustrated individuals posts have worn quite thin. And since you have nothing else
to offer, welcome to my kill file.

Next!

To the rest of the community here I'd like to apologize for letting this get so far off-topic. Thank
you for your patience.

Rick

I am certain your apology is well founded, and really not necessary.
If I restrict you with rhetoric or anything else, you are likewise cornered.
In fact, you are cornered, and are using the worst,most hideous and pompous form of rhetoric yourself.
The large percentage of religious people know exactly what they believe in, and you would attack all of
them with your stipulations for proof of the truth.
Maxwell made mistakes, and you still use them.
The second law of thermodynamics is fallacious.
Come on. Your so-called scientific method which as used by you, is hardly more than another fanatical sort
of religion, a shield for your delicate ego and shattered intellect.
The falseness of your approach as indicated by the sudden turn to visciousness is what is really
ridiculous.
You are one who can imitate the truly great men, whom you deign to emulate for succor.
There are failings within your psyche, probably due to overwork at social acceptance.
You crave recognition as at least an equal in society.
But your methods are deplorable and meant to be destructive.
Incidentally, I aced mathematics, and this can be proven, although I shall not do so to your ilk.
I am lazy.
Therefore I don't revive the process.
I have done many things, and more than even you will ever dream of, with your stultified and atrophied
flair for originality, as well as your utter refusal to look at anything which you can not understand due
to a vitamin shortage or something.

The same laughing colleagues you speak of laugh not only at that which you presume, make no mistake.
They laugh also at you, either because they consider you ignorant to be sucked in by a stupid old man, or
because they know you merely wish for a cracker.
You have led me into a soap-operatic paradigm, to divert attention which you crave from your ineptitude,
to a social situation of mudslinging old hags.
This is not my preferred activity.
You are a fomentor, a trouble maker.
You attack everyone and everything you happen to stumble across in your relent search to elevate your
petty ego.
Your mathematics and arguments are pathetic and no more than I would expect from a Military

McCaw.

You have no originality.
You have no basis in fact OR imagination, what you have is a repertoire of cliches and verbal
abuse.
You begin politely and interestingly, then as soon as you think you spot a weakness, your true destructive
yearning rears its ugly cranium.
This is borne out and provable even to you, by reading your past postings to other people.
Incidentally, all postings on newsgroups are archived and accessible by and at DEJANEWS.
Prove that to yourself, and learn social skills.
Whether I choose to do your mathematical hoop-jumpings or not, does not change what is true.

You have absolutely no interest in anything except recognition.
While it may be true that you attained master standing in your courses, nevertheless a modicum of spelling
would seem to be essential in the higher forms of mathematical endeavors.

A lack of spelling talent clearly demonstrates a lack of spatial awareness and the ability to utilize
mental imagery effectively.
Therefore I would say that you like to process along a linear fashion.
Now I take all of the above back, as it is not my nature to be insulting even to people such as yourself.
I also wish to not allow you to corrupt me into your area of socialism.

So back to square one.
Vacuum tubes transfer faster than solid state by a factor of up to eighty.
It is so.
You want it, earn it.

When you started out in life, you did not demand proof of everything your teachers told you.
You just learned and tried to pass grades.
Eventually, you bought into the system and made their thoughts your own.
All of a sudden, everything coming from outside of those thoughts must be proven.
Not for the reasons you stipulate, but to protect your form of religion,
your treasured petrified mindset.

You seem to be incapable of accepting newness within your delicately structured fortress.
You mentioned about the sun and the earth and the revolving relationship.
The earth revolves about the sun but not vice-versa?
Check the galactic cycles.
There may be one turn of the sun around the earth every so often.
At the same time, you say that two multiplied by three is the same as three multiplied by two.
The process is not the same, although the numerical result seems to be.
I can't seem to teach nuclear physics to my cat.
I should learn to not bother.
Again, all of the above is just playing into your hands, and I apologize.
But please, all bantering aside, do continue to think about the speed.

Please.
I know I have faults, everyone does.

But I have an ego just like you.
So research, Rick.
You're halfway there.
Hans

I once repaired a 1902 Victrola. Not an edison cylinder unit, but 78 RPM.
(I have an edison unit)

It needed a new spindle for the spring assembly, so that you could wind it
up properly. A little lathe work, and it was as good as new.
I also discovered the origin of the term "Stick a sock in it!" as the only
volume control possible is mechanical, and they are suprisingly loud.
My mom asked me to "turn it down".. :)

This of course was before I got my ham licence, now that I've passed the
code test, I doubt I could do it again ;-P

3021. B&W vs Color

> statement of "black and white is a whole lot faster than color". I am
> of course assuming that you are refering to the actuall EM propagation.

He's writing about propagation inside a TV.

ASSuming made an ASS of you.

And why? Because a higher frequency signal
travels through its circuits faster. Or put
another way, the color signals pass through
a rather narrow bandpass filter which tends
to slow down their passage enroute to the
picture tube.

The Y or "brightness" signal circuits which
produce a B&W picture in any TV are/should
be designed for 3.5MHz bandwidth. That Y
signal is what a B&W receiver uses and the
reason NTSC was compatible to both B&W and
color receivers.

Originally color TVs used 1.5MHz bandwidth
for the I signal and 0.5MHz bandwidth for
the Q signal.

Nowadays the cheap bastards manufacturing
TVs have narrowed all color circuits to
0.5MHz so you don't get true reproduction
of what is being transmitted.

And .H .H Russell wrote again:
> There is a delay coil?

Early TVs had two delay coils (actually delay
lines) - one of about 1.0 microsecond to slow
down the Y signal to prevent it from reaching

the picture tube before the color information.
Another of about 0.5 microsecond was to slow
down the I signal so it wouldn't get to the
R-G-B matrix before the Q signal.

Today's TVs use narrow 0.5MHz bandwidth in all
color circuits, so a time delay is needed only
in the wideband Y (brightness) signal circuits.

Radars and computers also use delay lines.

Mathematics?

Hokai Maru.
Three Apples multiplied times two Oranges equals what?
(3A)(2O)
Equals six quantities of fruit.
Who said you can't do that?
The point is coloring.

Now this:
(3R)(2Y)
> R+R+R+Y+Y
But.
It is not the same as in:
R+Y+R+R+Y
The point is position.
And also leads to procession.
I apply three coats of red paint and also two of yellow paint.
The order in which I apply them, determines different resultant tones.
The point was procession.

Further:
Temporal placement.
If I apply any two coats before the first one dries, we will have a mixing.
Extend this to any combination or permutation of wet/dry applications.

Add to this the sequence, and you have many resultant outcomes from a simple basis.

If I divide one apple by nothing, I still have one apple.
But if I divide no apple by one, I have nothing.
So 1/0 is not the same as 0/1, but you swear that it is.

One can not look only at the results of one particular arrangement, and claim that it is true in all
cases.

Three apples multiplied by nothing is still three apples.
But nothing multiplied by three apples is nothing.

So I would say that you cannot multiply a nothingness by a something.
And you can't multiply a something be a nothingness.

Yet what you had at the onset, is what you have at the end.
So this expands an earlier statement into:
You had a nothingness, and tried to multiply that by three apples.
So you must have had three apples to multiply by.

Thus the process is semi-prohibitive.
But the results still exist.

In order for this to be clear, we have to determine the field of operation.
It does no good to multiply an orange in New York by an Apple in Amsterdamn.
Placement is important.
You have to think locally, or globally.

What is the parameter of influence.
The world, the universe, your lunch-box, your imagination?

By the same token, Rick, we can do mathematics with values now, and pertaining values in an other time
arena.

Thirty pennies multiplied by two acquisitions equals a total reap of sixty pennies.
Yet you might not actually HAVE the sixty pennies, since you got thirty of them ten years ago, and thirty
today.
So math can be spaced over various time domains, yet apparently still yield identical values as if the
time domain were a constant and the same for all components.
Hence it is critical that to effect a computation for an instantaneous occurrence, the factors involved
must be at that same instant.
Enter phase-shifting, vectors and determinants, matrices, and so on.

If one travels at sixty miles per hour, it matters very much whether an hour was measured, or another
length of time.
It matters too, where in the time line that hour was placed.

Sixty mph for ten minutes is the same as 60 mph for two hours insofar as a speed designation is concerned.

It is not the same if we are considering distance.
So it is important to always look at the forensics of the intrinsic values and appellants.

I can't say to the peace officer who caught me, that I was doing only forty-five miles per hour
because I was doing thirty yesterday when he wasn't around and sixty today.
Yet the average speed says so.
Nevertheless, I might have been doing thirty yesterday for ten hours!
And sixty today for four minutes.
The fact is, I was speeding, and for how long is relevant.

We can average the speed.
Now what about the distance?
No. That totals up.
It does not seem useful to average the distance and claim that I traveled so many miles per day when in
fact I did not, I traveled so far today, and a different distance yesterday.

Brings to mind, this averaging does, about the rounding out of numbers?
Where does the accuracy go but out the window, when we round numbers?
And how can you avoid doing so, especially with decimal fractions involved instead of common fractions?
The accuracy and precision of measurement is not perfect.
Therefore the results of any computation based upon measurement is not perfect.
You mentioned the fellow's name-
Combine this imperfection with rounding out, and you compound the error factor.
Further complicate matters by using limitations in appellation, and it is worse yet.
More problems added to the soup with faulty theory and formulae.

Throw in a few spelling mistakes, and it is a mess.
Yet you ask me to use this system?
Your position is shaky, just as much as mine is.

More to the point, I know something which you don't, yet.
I try to communicate this knowledge to you.
You don't speak the language, and want me to use yours.
I don't speak the language you want in this case, because it is not the right language for the claim.
I am a lettered physicist, right?
I go to Papua New Guinea, and start to teach.
Nobody will understand me at all without knowing the language I'm teaching in.
Okay. So we end up speaking the same language, but they still don't get it, this time because the
mathematics is different.
Or the conceptualization.
Much too difficult.
So they ask for a prototype, and I set off a Cobalt bomb to demonstrate.
The proof was there, but we ended up too dead to appreciate it.
Now another country from afar, witnessed the explosion, and identified it as being that of a Cobalt bomb.
So they know it exists.
But they missed the process of construction, and can't prove it.

The onus of proof can be a pain.
That is why in the military, we have the system of commanders.
These men know, the guys below don't need to know, only follow orders on how to do things.
They don't need to know.
The results derive.

If the men want to know how something worked, they can go figure.

We can have a person who discovered how to do something, yet had no knowledge of science or mathematics.
He/she can repeat the process any time.
You would lose out if you demanded mathematical proof.

So alright, you say, "Hans, that's fine. if you're too stupid to do algabra, show me physically!" .
When I ask how, you want a digital storage oscilloscope.
Well. I just happen to have one, and believe it or not I can prove it.
In fact i already proved it, but you may have missed it.

Check this thread near the end.
There is a jpg. In the jpg is the scope.
However, rhetorics permitting, I don't know if the scope would be an accurate demonstration.
I don't know everything, and you won't ask for proof of that of course, so I want someone else to do my
homework and prove that valves are faster.
I want someone else to do the homework for you too, so that you will know also.
Post script:
There are ways and means of accomplishing short-wave communications which have slight precious
differences.
Those differences lead to enHansment of the enjoyment factor of SWL.

Hans

{bunch of amatuer psycho crap snipped}

> So back to square one.
> Vacuum tubes transfer faster than solid state by a factor of up to eighty.
> It is so.

You know Hans, I really thought for a second there that you were actually going to get back on topic. I
thought you might even have a proof of your own.

I'm caught within the stricture of a pathetic scientific religion? What about you Hans? Read your own
statement,

"Vacuum tubes transfer faster than solid state by a factor of up to eighty."
"It is so."

Your proof is "It is so."? Is this *your* religion Hans?

"Vacuum tubes transfer faster than solid state by a factor of up to eighty. I am Hans and as I speak it, it is
so."

Remember the teachings of Mark Knoffler Hans, When you point a finger you've got 4 more pointing back at you.

There are very few things that get my back up but as a man of science one of them is going on the net a seeing
posts and sites from people who've reinvented "Tesla's Earthquake Machine", they just don't want to use it
because it will, you know, cause an earthquake. Or the guys who are on the verge of perfecting the dielectric
that will allow them to use a machine that will draw "Free Energy that Exist in the Universe all Around Us".
They all make a lot of noise, back it up with a lot of pseudo-science, but when asked for proof it's always
the same. "Oh, we can't do the proof yet but give us your money and come back in a few months" (years,
decades, never).

Am I attacking you personaly? No. Am I holding you accountable for statements said. You bet! Am I attacking

said statements. Sure am. Have I insulted you? Do you find my tone insulting? Perhaps it's because I'm tired
of signing on the net and finding Shaman selling snake oil. This is a free internet and I will fight to keep
it so. Anyone can say what they wish and if I disagree with thier statements I will not stop them. But I will
refute thier statements with my own. My right.

> You want it, earn it.

No Hans, I have earned it. With years of study and dedication. I know science is not precise. As a physicist I
understand this, as an engineer I live with it. But I stand with my proofs and I refute your statement. If you
want to prove me wrong Hans then do so. You say you can build things and you've acomplished so much. Why don't
you build a test bed with a fast transister and a fast tube, feed them a clock and throw the signals on a
scope and see which one is the fastest. Send me your results and the test bed. If your right, I'll put them on
the net myself and publicly apologize for attacking your statements.

You earn it Hans, until then I refuse to fall inline with the religion of Hans.

Oh, that thing about the spelling. I've got 3 forms of dyslexia, even the simplest word can be misspelled and
I wouldn't know it. I don't have a spell check on my editor and if I checked every word in a dictionary I'd
never get anything done. Nice grasp though, "a drowning man will grab even the tip of a sword" as they say.

{more crap snipped}

3032. Heath Warrior filter cap and Heath manuals FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-03 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <BuWz3.3204$Dj2.200295@monger.newsread.com>
Source record: 79563

I found what I am sure is the original filter cap from a Heath Warrior amplifier.

It is 8 uf at 3000 V, oil filled, and has Heath part number 47472 on it. Mounting brackets are included.

Any one need it? $ 40

I also have the following Heath manuals available. All are originals, and are in good condition.

IO-103 Five inch scope $ 12

GR-2000 TV Set $ 12
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 6

Prices do not include shipping from Florida.

E-mail to W8EK@fdt.net

Thanks.

73,

Ken, W8EK

Neat little 6 meter AM Transceiver, circa mid 60's.
Checked it out and seems to work OK. Someone
added a switch on the front, turns off RCVR, seems
it was paired with a L'il Lulu. Comes with "original"
manual (a rarity these days)!!
$75 plus UPS packing and shipping costs.

Dick,
Although your offer for the transceiver looks reasonable...
I'm not familiar with 6 meters. Are there still "AM"ers on that band?
I noticed that the new RS 6 meter rig supports AM/FM/LSB/USB.
Just curious.

Those Third World dictators are going to have to sell a lot of cocaine to be able to afford this stuff! $4000 for an HF rig and it doesn't even have dual receive or RIT. I guess the heavy cabinets are good protection when you're running away from the rebels, though.

That's right, I haven't done an inventory but there is about 60 lbs worth :) I'm guessing maybe 150 folders? They range from low 200 series up through 500 I think. I'll inventory them in the morning and anyone wanting them make an offer. I'm an outside salesperson so within a few weeks could deliver (I't just doesn't seem to make much sense to try and ship them)
or meet halfway in OH, MI, IN, KY. I'll trade for anything you wanna throw at me I could use an old receiver or something. I don't really care just want them to go to someone who has an interest. No ham equipment in these all TV, Radio, Phono, Amps, car radios and misc. Some have been opened but never assembled into the folder.

3050. Observation of an Old TV Repairman

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-03 00:00:00 UTC
From: dxguy@earthlink.NET
Message-ID: <37CF90EF.77F7@earthlink.net>
Source record: 79581

Hans Says:

"I have repaired and watched an early RCA color tv, the one with a round
crt
in it.
I don't care to banter.
The picture, especially in motion, is superior.
End of communication with Mr. Miles.
Hans"

To which I say "Bravo!!" Never let common sense get in the way of a silly argument.

I began working on TVs professionally in the very early '60s. Almost nobody owned a color set. They created a lot of interest and close scrutiny. The early pictures were terrible. The round 21 inch tubes (50's through mid 60s) had a horrible, weak phosphor that produced very little light, had a long persistance (red, green, and blue had differing persistances, which made for very crappy action shots, BTW). The actual phosphor area w.r.t to the mask was fairly small, and the mask material wasn't very black. Also, convergence had to be done manually, and there were always out-lying areas that looked bad. Focus was mediocre, varying across the screen, and ripple modulated so that sharp pictures were rare.

Move up to the 25 inch rectangular tubes (mid 60s to late 70s). Blacker mask (gives better contrast), better phosphors, higher voltages give more light, better focus, better convergance. Persistances were also matched better.

Now, move into the late 20th century. First of the great advances came from the Sony Trinitron. Saw my first one in 1975. I was blown-away by the superior quality of the picture compared with anything I'd worked on previously. Tubes have huge ratio of phosphor to mask area due to "holes" being replaced by slots (or other more efficient geometries). Voltages are even higher. The masks are very black. The viewing screen material is glare-resistant. Viewing screen is flatter, and has more usable area for a given tube size. They are self converging due to tight mfg tolerances and production methods that eliminate mistakes and variables (AND - the convergance is better than any of the thousands of TVs I worked on over the years. Many of them quite good.). Focus is very sharp across the entire screen.

That's just the pix tube. All of the electronics is now better as well. Much simpler, more reliable, takes advantage of the VITS (Vertical Interval Test Signal) and other embedded info to make a

"perfect" picture. Most mechanical clap-trap is gone, replaced by cheap, reliable electronics. Many more useful bells and whistles now also.

Maybe what Hans is referring to is the programming? If that's the case, I'll agree 100%. Most of what I see on TV these days is shit. I still prefer to look at old black and white programs from the '50s and movies from the '40s. Beats the hell out of the jive-ass programs one finds on the networks these days. But, then again, I don't have cable. Which is a whole 'nother subject.....

WTB Vibroplex Paddle

A local ham friend is looking to purchase a VibroKey Deluxe
non-Iambic, single-red-paddle with chrome base.

Please state condition/price.

You can reach him directly at: jayneeb@asu.uswest.net

3054. Re: Where have all the builders gone?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-03 00:00:00 UTC
From: jjesson@ais.net
Message-ID: <rtGz3.2$Vb.50@news.ais.net>
Source record: 79630
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.shortwave

After running a communications shop and repairing and rebuilding National, Hallicrafters and other tube gear in the late 60's, designing and building receivers in the 70's and 80's, I feel I am certainly qualified as a builder and hardcore electronics experimenter. Software knowledge was gained over the years along with hardware knowledge through college and hands-on experimentation.

Anyway, I thought I discovered the GOLD MINE of experimenter delights when I first looked closely at NetMeeting first Version 2.11 and now 3.01... what a amazing product! Here is a list of both hardware and software projects... many of 'em current projects:

HARDWARE PROJECTS

- Design a 2.4 GHz Digital Video/Audio/Application Sharing Local NetMeeting Link (current project, 10MB)
- Build a Radio Controller Operated Remotely Through NetMeeting (many people sharing frequencies)
- Redesign Video Camera for Infrared Imaging (remove IR filter in from of CCD and add Visible light filter)
- Construct Fiber Optic Camera Lens and Adaptor
- Design and Build Performance Scope to look at Signal Eye Pattern
- Design and Build Data Constellation Scope (use fast external A/D Converter)
- Interface any Sensor for Remote Monitoring - Temp, Humidity, See Back Yard via NetMeeting CAM

SOFTWARE PROJECTS

- Write Radio Slow Scan Interface to NetMeeting API
- Write Control to allow Bandwidth Slider - Variable BW, Slow Scan to 30 Frames Per Second
- Collaborate on New Electronics Projects - Up to 8 HAMS!
- Collaborate on Circuit Simulations - Share Models in Real Time
- Create Virtual Special Interest Chat/Video Group Discussion

Just of few of my ideas for NetMeeting projects! A great communications tool... will lots of additional hardware and software components to be added... I have to get a web page up devoted to NetMeeting projects. The 2.4 GHz wireless link is built upon some Harris subsystems but you could design one from scratch. One of my favorite modern project resource is Circuit Cellar Magazine...

Thanks, Joe Jesson

3055. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7qnipddha1@news.hawaii.edu>
Source record: 79631
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an automobile accident; the future of this newsgroup is not known. 73 Bill...

Well, what can I say except the permitted nothing.
I am oppressed with restrictions and impositions.
Only your formulae and math.
Only your processes.
Naturally anyone's conclusion would be the same as yours under these conditions.
It is a wonder to me -now that I'm reduced to semantics- that any new discoveries can be made at
all, what with all the answers all known already.
So your challenge to me is to provide proof to you, using only your acceptable methods?
-Can't be done for just that reason.
And my statement requiring my proof according to you, really should be regarded as a stimulating
area of interest for you to pursue.
That is all it is for.
We are not on trial here in Kangaroo Courthouse.
Say I report having seen an UFO.
You want a print-out of mathematics to prove that I'm telling the truth, the authorities will want
third-degree cross-examinations and psychiatric evaluations, and so on.
In the meantime, some other country drops a bomb on us from a new type of aircraft which I could
not identify.
Sensible?
Re-reading my past postings will help to reduce the necessity for my repeating my arguments in the
general sense.

One plus one equals two every time?
So I know arithmetic.
Then they come and say I must learn math, then the "new" math, and algabra or algebra, calculus
dating all the way back to, did you say Archimedes?
Then Quantum mechanics, then Scalar physics.
Is that it finally?
Do we know everything there is to know?
Come on.
Your tone in this last letter is entirely posturing, as compared to your seeming interest at the
onset.
Is it peer pressure?

Not to worry.
Sometime soon, a new discovery will be announced.
Why haven't you already found it?

This is becoming tedious.
My statement stands as presented, and even if I'm corrected about eighty times when it is three, so
what.

Tell us (notice the process of bonding here) what you know about Barkhausen oscillations, and the
Caduceus (sp) coil.

Thank you for calling. *click*
Next!

Nostalgia, yep!
I don't know the song, but it sounds good.
As for the Pleiedians, better avoid them.
Andromedans are okay, but I don't mean Richard Hoagland's type.
I say, to the newbies, "wanna play 'chicken'?" .
You fellas in your Asian coupe, and us in our American Kings of the Road.
So I know what you write of, I had a Gonset transceiver also at one time.
RF gain and AF gain shafted together, is that the one?
Great set.

3066. Re: OTs: Where have all the builders gone?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-04 00:00:00 UTC
From: Will White <wcw@uswest.net>
Message-ID: <37D0FE4F.3A1EBDF4@uswest.net>
Source record: 79493

Over and over I keep reading on the ham newsgroups and the letters to the editor of the ham mags about this awful plummeting of the numbers of ham ops. Where are you getting your figures guys? I see a steady upwards trend in the numbers of licenses going back to Adam. There has been a *small* dip since about 1993, but it amounts to no more than 2%, per FCC and ARRL sources. Look at any chart over a long periods of time and there are peaks and troughs. Always. What is all this fuss about? I just don't know, becuase I can't find any information to support the statement that ARS numbers are preciptously declining. Besides, ham radio did OK in the 30's with 35K-40K, and in a hostile regulatory environment, and did fine in the 50's with about 100K hams, so now that we are around 650K the panic sets in? Silly, just plain silly. Chicken Little was reasonable, by comparison.

For Sale:

Knight-Kit TR-108 2-meter AM transceiver, matching V-107 VFO are in
excellent condition.
It uses a 2E26 as the final amplifier and a 6L6GC for 15 watts of
plate-modulated AM phone.
It runs on 110 V AC or 12-14 V DC with the built-in power supplies.
The V-107 VFO can be
used with either the TR-106 or the TR-108 transceiver. Needs Power
Cable.
Will include a spare final tube - sell for $125.00 plus shipping

= = = = =

Knight Kit P-2 SWR meter in very good condition with manual.
Comes complete with remote sensing head, cable etc., and in proper
working condition.
Will sell for $35.00 plus shipping

= = = = =

Radio Shack DX-160 Shortwave Receiver in excellent condition, with
matching Speaker.
This is a DESKTOP receiver designed for the serious listener who wants
to spend all evening hunting rare stations or listening in the
armchair to worldwide broadcasts with ease.
Covers all shortwave bands from
Receives AM, CW and SSB. Radio and speaker are both in near-mint
condition.

DX-160 Receiver, Speaker will sell for $150.00 plus shipping

= = = = =

Kenwood R-600 General Coverage Receiver 0-30 MHz continuous coverage.
Mint condition. Has AM, AM Narrow, CW, USB and LSB modes. Covers all
bands.
Digital display, front-facing loudspeaker built-in.
Headphone jack, recorder output jack, noise blanker, RF attenuator
etc.
Three antenna terminals and mute switching for use with transmitter or
transceiver.
Built-in Speaker and AC PS for 110-120V or 220-240V AC $200.00

= = = = =

Heath AM-2 SWR and Reflected Power Meter. Very good condition. Front panel is very very
good. Case needs cleaning. SWR meter has all functions working fine. This SWR meter looks
perfect with a DX-20, DX-35, DX-40 or DX-100 etc. Will sell for $30.00

= = = = =

Heath HW-2036 2m FM Transceiver with original touch-tone (DTMF) microphone for making auto-patches. Radio is in excellent condition. This is a thumbwheel switch tuning synthesized rig that covers the entire 2m band 144-148 MHz in 5 kHz steps. Has built in analogue S-meter, volume, squelch, Tone OFF-A-B-C and offset/aux controls. Will sell for $75.00

= = = = =

General Electric model 7-2705A Pocket AM Transistor Radio in very good condition $25.00

= = = = =

General Electric model 7-2705B Pocket AM Transistor Radio in near mint condition $35.00

= = = = =

Panasonic 8-track tape player, with cables. Model RS-802-US in Excellent condition.
No visible head wear. This deck looks almost like brand new. Plays like new.
No scratches. Beautiful. Will sell for $49.00

Antenna Switch

Chrome finish, USA made with SO-239 Connectors, Two positions
$15.00

Aluminum box switch with three positions, with SO-239 Connectors
$16.00

= = = = =

Great item for tube homebrewers:

Brand new Green phenolic (or is it fiberglass?) terminal boards with
turrets
10 terminals, on a 2.5" X 1.0" board with 4 mounting holes. $1.00 each
Stock up! These are perfect for building tube receivers and
transmitters or for
repairing/building guitar amplifiers and hi-fi audio amplifiers! Just
$1.00 each

Also, I can supply almost any size fittings, grommets, brackets,
connectors etc.
Inquire with your needs!

= = = = =

Bourns 10-turn Vernier knob for precision potentiometer controls.
0-10 with turns counter and flip-lock, brand new. Approx 7/8"
diameter.
Sell for $9.00 each
Two for $17.00
Four for $30.00

= = = = =

Reduction drives:
Brand new Jackson Brothers style reduction drives 6.5:1 for standard
1/4 shafts.
This is the standard small brass planetary drive used on a lot of
gear!
Mounts with two screws. Made in England by Jackson Bros.
Sell for $9.00 each
Two for $17.00
Four for $30.00 (Ten or more $7.00 each)

= = = = =

Small Chassis 6" X 4" X 2" dual channel DC amplifier for VTVM with
12AU7 tube,
balance and gain controls for each channel etc. Lots of good
tube-type parts
Great foundation for a small transmitter, pre-amp, receiver project
etc. $10.00

= = = = =

Bud Box, diecast aluminum 4.5" X 3.5" X 2", new, no cover plate $4.00

= = = = =

Hallicrafters Manual:
HT-46 repro $8.00 (one only)

= = = = =

Heavy Duty SWITCHING POWER SUPPLY 24 V DC at 7.9 Amps regulated.
Made by Sierra: Model 5E24A Mint condition. Works great.
Input from 90 V to 250 V AC 50/60 Hz. Great for driving motors, relays
etc.
Perfect for the auto-tune system on an ART-13 Transmitter for example!
10.5" X 5" X 2.25" (or in metric size: 27mm X 13mm X 5.5mm)
Will sell for only $32.00

= = = = =

Nice 115V AC power supply in a 19" standard rack cabinet (black).
Two Power transformers by Colorado Transformer Co.
Includes fan, 4 switched isolated AC outlets, etc.
Lighted AC on/off switch, Cooling fan, fuse, AC cord etc.
This is a top quality well-regulated supply.

+ 15V DC at 4 Amps (or possibly more)

- 15V DC at 4 Amps (or possibly more)

+ 5V DC at 3 Amps (or possibly more)

- 5V DC at 3 Amps (or possibly more)

Also has beautiful Western Magnetics 400 Watt isolation transformer
feeding a row of 5 AC isolated outlets on top.

Additional outputs for 20V AC etc.

Excellent condition. Very clean inside, looks like new.

Will sell for only $60.00 plus shipping

= = = = =

Megahertz PCMCIA Modem with X-jack. Perfect condition. Ideal for
surfing the web
with any laptop computer. 14.4 kb
..... $10.00

= = = = =

Isolation transformer 120V to 120V AC at 2A / 240 Watts. Open frame
with flying leads.
Will sell for $19.00 (only one left!)

= = = = =

Panasonic 8-track tape player, with cables. Model RS-802-US in
Excellent condition.

No visible head wear. This deck looks almost like brand new.
No scratches. Beautiful. Will sell for $49.00

= = = = =

Set screws (grub screws) for various knobs and drives etc. available.
Almost any size - most have recessed hex heads for use with allen
wrenches.
These are $0.25 each for up to 9, Fpr ten or more the price is $0.20
each.
Typically these are #6-32 and about 1/4" long but can supply many
others.

Inquire stating thread size and length.

= = = = =

19 Inch Rack metal panels
3" high - $5.00 each
6" high - $10.00 each
12" high - $15.00 each

Most are new aluminum or steel, most are used. 3" panels have a small
L-shaped slot in the corner.

= = = = =

Telescoping mirror - extends to 18" long, with red insulated handle,
and 1.75" diameter mirror on swivel ball at the end - ideal for
inspection
of interior of boatanchor radios etc.! $10.00 each

= = = = =

Recoton V900SXR Video Sender/Receiver system. Runs on 900 MHz
band and sends/receives perfect TV signals anywhere in your house
and maybe beyond. Wends video signal plus stereo sound.
Looks like a small flying saucer on a stand about 4" diameter.
Excellent quality and top of the line! Brand new in box - will
sell for $59.00 plus shipping

= = = = =

3070. What is it? (maybe the old timers know !)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-04 00:00:00 UTC
From: Al & Lo <alxlo@valinet.com>
Message-ID: <37D11AC8.2452BCAF@valinet.com>
Source record: 79497
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

I was given an old military communication "something" The printed Metal
tag on it reads - TS-12/AP (unit 1) .
It has 3 so-239 Connectors on it labeled input 1, input 2 and meter
input.
It has 3 pots on it labeled input 1, input 2 and master gain.
It has a meter labeled standing wave voltage ratio.
It has a power switch (on - off), a meter switch (amp - ext), a
switch labeled (Bol - xtal) and an input switch (no.1 - no. 2)
It is 115 ac powered
It has a schematic in the lid that has a confidental stamp on it,
crossed out, and another stamp which reads:
Classifacation Cancelled
Auth: janap 140(a) dtd nov48
Date: 2 apr 53
By (signature)
P.U.S.O

It has 5 tubes, all RCA, as follows: 6SJ7, 6SJ7, 6V6GT, 6H6, and a 6X5GT

The first 6SJ7 appears to be shock isolated on a mount with the words
"Presto Recording Corp. New York, U.S.A." cast into the aluminum.
It has four masive caps in it labeled; T6080 NGP 8 MFD 600VDC and
other assorted smaller caps and resistors
I can scan in the Schematic and email it if nessesary to ID it.
With all input and no output my theory is that it is an antenna tuner,
tester, or matcher
Anybody know ?
Thanks in advance, Al

From: mcREMOVE@sover.net
Message-ID: <37d17935.938543@news2.sover.net>
Source record: 79508

This is a nice compact antenna tuner from the KWT-6 transmitter. It is very light and extremely well built. Uses a combination of fixed and variable capacitances along with a nice roller inductor. Front panel has the same multi-turn knob as the KWM-1. Is rated conservatively at 100 Watts Carrier (AM/CW key down) which translates to about 175 Watts SSB.

The cabinet has been repainted (black), feet have been added and a ground post has been mounted in a spare hole on the rear panel. These mods are 100% reversable if desired.

Price is $100.00 plus UPS. If interested please reply by e-mail.

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you
are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

Wow, cool stuff. You should keep it all and open a museum! admission prices
will probably out do the sale prices in no time!

AM 2mtrs! 8 Track! Far out! I can dig it.

Boy I remember that! I wasn't even a teenager in the mid-60's, but I would always be hanging around Dad's TV shop. Many times I helped with the convergence process with me being the 'spotter' since Dad was red/green color blind. I can still remember saying, "Bring the green over a bit - now down with the blue..." . He'd be behind the set moving the magnets on the guns and I'd tell him which way to go. Some sets did pretty good, but some were real bears.
Ahh, the memories!

Hello,
A fellow ham by name of Louie, ZS1HE, is in hospital, paralized from a brain tumour.
He is trying to communicate by tapping Morse code with his one hand, I need to know if there is some program I can use in conjunction with a key that I can run on a 486 laptop with a sound card that will allow him to communicate with the staff at the hospital.
Please mail me direct, gkuhn@global.co.za

Regards,
G.Kuhn ZS1NZ

Tansformers for sale:

UTC S-62 filament transformer 10V CT at 5 Amps (M) $12.00

Heater transformer 5V at 3Amps (S) $11.00

See below for 6.3V transformers!

= = = = =

Audio driver transformers etc.:

Sescomm 3 Watts 15 k-ohm input, 30 k-ohm C.T. output (S) $14.50

3 Watts 190 ohms input / 8 ohms output (S) $12.00

+18 dBm 600 ohm input / 600 ohm at 75 mA C.T. output (S) $12.00

UTC 11282 10 Watts 20 ohms input / 4, 8, 16 ohm outputs (S) $21.00

= = = = =

Isolation transformer 120V to 120V AC at 2A (240 Watts) (M) $19.00

= = = = =

Isolation transformers:

120V 3 Watts - $ 3.00 (flying leads, open frame style)
120V 50 Watts - $25.00 Open frame
120V 150 Watts - $35.00 Open frame - solder terminals
120V 180 Watts - $40.00 In case, with 2 outlets
120V 250 Watts - $50.00 (New Stancor P-6161, NICE! looks
like 500 Watt size!)
(With AC power cords built-in)
120V 500 Watts - $85.00 Open frame
120V 1000 Watts - $105.00 Open frame

120V 200 Watts - $19.00 (flying leads, open frame style)

Other sizes and styles available. Inquire!

= = = = =

Step-up transformers:

Magnetron brand new power transformer:
115V AC 60 Hz in, and 208/240V AC out at 3 Amps

Also has a 24V AC at 1 Amp secondary also $79.00

Power xfmr:
120V AC in / 220V AC at 1.2 A (250 Watts) Out $45.00

120V AC pri / 200V CT AC at 2A (S) $25.00

= = = = =

120V AC in, 18V at 2 Amps out $8.00
Open frame. (M)

120V AC primary, 24 Volts AC at 24 AMPS(!) secondary (S)
$100.00

120/240V AC primary, 12V at 12 Amps, or 24V CT at 8 Amps (S)
$47.00

120V AC primary, 28V at 16A secondary (S) $55.00

= = = = =

Serious filament transformers:
(Most of these are potted)

120V Primary / 6V AC at 166 Amps! (S) $90.00

120V Primary / 9V AC at 111 Amps! (S) $90.00

115V / 230V AC Primary, 7.5V 51A Sec Approx size:
4.5" X 4.5" X 4.5" tall (S) (S) $60.00

115V AC Primary / 7.5V at 46 Amps (S) $80.00
(QTY 3)

115V AC Primary, 6.3V at 31 Amps sec. Approx size:
4.5" X 3.5" X 4.5" tall (S) $32.00

120 V AC primary, 12.8 V at 25 Amps OR 2 X 6.4 V at 25 Amps
Approx. size: 5" X 4" X 4" tall $39.00

120V AC primary, 6.3V at 40 Amps. Approx. size:
3.7" X 4.2" X 5.7" tall (S) $40.00

120V AC primary, Two sec. each 6.3V CT at 10 Amps
Approx. size: 3" X 3.5" X 5" tall (S) $28.00

120V AC primary, 6V or 6.5V or 7.0V AC (taps) at 13 Amps
Approx. size: 3" X 3.2" X 4.2" tall (S) $29.00

120 or 220 V AC primary, 6V at 36 Amps (open frame)
Approx. size: 4" X 4.2" X 3.7" tall (S) $36.00

115V AC Pri., 2V at 30A or 4V at 50A sec. potted (S) $36.00

= = = = =

Plate Transformers:

All 120V AC primary

68V @ 4A $30.00

75V @ 30mA, 6.3V @ 5.6A (Hallicrafter) $15.00

85V @ 500 mA $16.00

280V @ 500 mA $26.00

400V CT 100 mA, 6.3V 15A and 6.3V 8A $25.00

410V @ 315 mA, 220V @ 150 mA, 6.3V @ 12A $29.00

440V @ 110mA (New) $17.50

510V CT @ 85 mA, 6.3V @ 2.5A $18.00

560V ct AT 85 Ma, 6.3v ct at 2.5A $19.00

600V AC at 70 mA, 6V/3A and 5V/2A $18.00

650V at 125 mA and 6.3V at 4A $20.00

700V AC at 110 mA, 6V/4A & 5V/3A $22.00

750V AC CT at 35 mA $15.00

790V CT at 80mA, 6V/5A, 5V/2A, 5V/2A $22.00

800V CT at 80mA, 6V/5A, 6V/2A, 5V/3A, 16V/1A $25.00

840V CT @ 110 mA, 530V @ 25mA, 6.3V @ 1A, 5V@3A, 5V@3A $23.00

850V CT @ 80 mA, 16V @ 1.2A, 6.3V @ 5A, 6.3V@2A, 5V @ 3A $22.00

1000V CT @ 225 mA $32.00

1140V CT @ 85 mA, 5V @ 2A (New - Sterling) $18.00

1200V CT at 30mA, 735V CT @ 50mA, 5V @ 2A. Primary for 115V or 230V
$19.00

1500V CT @ 50mA, 600V @ 50 mA, 500V @ 2mA $26.00

1600V CT @ 30 mA $14.00

Many other voltages and sizes available. Inquire.

= = = = =

Smaller filament transformers:

(All 120V AC primary)

5V at 3Amps (S) $11.00

6.3V at 3 Amps (S) $9.00

6.3V at 4 Amps / or 12.6V at 2 Amps (S) $12.50

6.3V at 6 Amps (S) $18.00

6.3V AC at 10 Amps (S) $22.00

120V AC primary, Two sec. each 6.3V CT at 10 Amps
Approx. size: 3" X 3.5" X 5" tall (S) $28.00

6.3V @ 20 Amps Freed $25.00

10V CT at 5 Amps $12.00

10V @ 3 Amps $12.00

12V @ 5 Amps or 24V @ 2.5 Amps (S) $19.00

Many other voltages and sizes available. Inquire.

= = = = =

Excellent transformer for foreign power conversion:

120V to 240V AC 150 Watts $40.00

120V to 240V 250 Watt $50.00

120V to 240V 500 Watt $80.00
(New Magnetron, top quality unit)

FOR SALE: VARIACS from $40 to $245

These are some of the best variable transformers you will find
anywhere.

SUPERIOR (NEW / Panel Mount) 0-140/280V for 120V AC IN
or 0-240 for 220V AC in. At 3.5 Amps $70.00

SUPERIOR (NEW / Bench Mount) 0-140/280V for 120V AC IN
or 0-240 for 220V AC in. At 3.5 Amps $125.00

= = = = =

Used - open frame variacs - front panel mount:

0-120V at 3A $42.00

0-140V at 2.5A $42.00

0-120V at 1.75A $38.00

0-120V at 2.25A $40.00

0-120V at 4.5A $75.00

0-120V at 7A $80.00

0-120V at 7A $90.00 (QTY 2)

0-280V at 3.5A $130.00

= = = = =

TENMA 0-130V AC at 10 Amps Variac NEW w/1 yr warranty. Has ammeter,
3-prong cord and socket. Current: 10A, 1.3KVA.
Fuse: 10A AGC (included). $160.00

KRM (NEW/Bench Mount, in beautiful case with meter and switch)
0-120V AC at 18 Amps $245.00

STACO J401 Panel Mount (used, tested, open frame) Isolated 0-140V AC
at 4 Amps Dimensions 6" X 6" X 5" deep. Front has 4 mounting holes on
4.75" centers.
This is a heavier Variac. 24# $75.00

STACO Panel Mount (used) 0-140V AC at 20 Amps $160.00

SUPERIOR Panel Mt. (used) 0-120V AC at 20 Amps $135.00

SUPERIOR Bench Mount (Used) 0-120V AC at 15 Amps $140.00

POWESTAT Panel Mount (Used) 0-280V AC at 9 Amps $135.00

NOTE: All Variacs listed above are NON-ISOLATED AUTOTRANSFORMERS
unless
otherwise stated.

Polyphase & LARGE variacs available. Other sizes available - inquire.

Example:
0-140V at 42 Amps (5000 Watts) $330.00

0-140V at 60 Amps (8500 Watts) $360.00

3120. KW SWR FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-05 00:00:00 UTC
From: bn <106312.1035@CompuServe.COM>
Message-ID: <7qts1j$870$1@ssauraac-i-1.production.compuserve.com>
Source record: 79456

I have a nice KW SWR Meter, as used with the British KW-2000
series
transceiver.

Anyone with a 2000 or derivertive, needs the SWR meter, the Dummy
Load and
the ATU to complete his/her collection. This is part of it.

US$40 plus postage.

Ben G4BXD.

> tester, or matcher
> Anybody know ?

From NAVSHIPS 900,105: "TS-12/AP is a standing wave indicator designed for measuring or checking the standing wave ratios of plumbing, TR and RT boxes, crystal mixers, and antennas of various radar equipment. It is also used in conjunction with TS-13/AP (signal generator) for extensive testing. [It] consists of a slotted section, probe and fittings, amplifier and meter, cables, tools, and assorted screws..." Unit 2 consists of the probe and accessories.

73,
Mike Hanz KC4TOS

3122. Trade: SB-200 amp for 2M SSB radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-05 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <37D28115.9FBD35F1@juno.com>
Source record: 79458

Trade: Heathkit SB-200 HF amplifier w/ manual for 2 Meter all-mode.
SB-200 is in really nice condition with good tubes. Has a stand-by switch
mod installed. This is a really nice amp. Trade even for a 2M all-mode
solid-state radio such as:
Kenwood TR-9130, TS-700SP or Yaesu equivalents.
In a hurry, need 2M SSB for VHF QSO Party coming up next weekend!

Posted for Dan Beach WR4F Email: wr4f1@juno.com
or E-mail W4UDX@juno.com

3123. FS or Trade: NON-working FT-107R transverter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-05 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <37D2814A.A4D172D2@juno.com>
Source record: 79459

For Sale: NON-working Yaesu FTV-107R transverter w/2M module. Includes
ACC cable and photocopy manual. In only fair condition. I recently bought
this unit from a ham in Florida for $150 who descibed it to me as in good
condition and supposedly working. Truth is I got burned on the deal. I won't
mention his name, but his call is something like N#PBC. (Be careful when dealing
with this guy.)
Anyway, the transverter is for sale at best offer. Or would trade even for a Ten-Tec
2M transverter. Let me know if you are interested as I will probably sell it reasonably
cheap. It receives OK, transmits when first powered-up, but then becomes very
intermittent. Will definately need some kind of work. Maybe the relays need replaced....

Email to... W4UDX@juno.com

Mark W4UDX

3125. *NEW* James Millen Transmatch Type 92200 2KW Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-05 00:00:00 UTC
From: k1dpm@aol.com
Message-ID: <19990905112429.29168.00002036@ng-ff1.aol.com>
Source record: 79461

This is a brand new tuner manufactured in 1964 by the James Millen Mfg. Co. Inc., Malden, MA. I have removed it from the original box to test it. It works perfectly. All ORIGINAL packing materials, box, manuals etc. included. You will receive this tuner just as it came from the company in 1964. Its NEW!! 50-70 ohms input. 10-1000 ohms coax output. 80-10 meters. 2KW. 50 ohm reflectometer using a 200 micro ampere meter. 7"H x 14"W x 14"D. 17 pounds. Pi-network tank circuit. This can match any antenna system between 15 and 500 ohms to a transmitter impedance of 50 to 70 ohms. It is grey in color. Has forward and reflected power switch, higt to low meter calibration, band switch, parallel and series tuning capacitors. What else can I say. Its perfect. I am selling it as I need to raise money to go 100% Collins. $450 shipped anywhere in US.

In addition to the above, I specifically need the 160-meter LF converter for the 2B. Please state what you have and condition with price. Also indicate if you have accessories that you would sell separately.

Thanks,
Rick WB5FDP

Isn't the Wallenda family the one of the high wire fame? The famous "Flying Wallendas?"

Of course a bit of detective work on your part would find that somebody by that name with that call DOES exist in Escondido, CA. "Basic" free e-mail service by JUNO never used to include any other Internet ability so maybe that is why he doesn't have that ability!!!! In addition a quick search for that name in Escondido also produces the same address as the callbook and a telephone number.

So perhaps your feeling about something being wrong with the deal is right but at least the person, his call and a valid address and phone number does exist...

I have for sale 2 mint B&W T/R switches (Model CR-115).
They are about 1.5 - 2 years old and I bought them NEW.
They were New Old Stock. They have both seen little use.
I will ship them in CONUS for $45 each. If you want both,
I'll ship them for $80 in CONUS. I'll even include the
relay switching set-up I used with each.

If interested, plese send me email at sereikas@yahoo.com

Thanks and 73!

George

All,
I have for sale the above. The R4b is in ex condition,like new. The T4XB is in ex working condition. Someone drilled 4 hole on the top looks like for an external fan at one time. The off and on switch is not working. An external switch was added to the PS to take the place of it. The speaker and PS are in ex condition. Everything is working fine. Included are all manuals.
$500 plus shipping.

George

Wow! Thanks for pointing that out.

I want to contact them and make sure it is the same model and other
limitations etc. Perhpas I paid too much for mine...

Here's what I found out.:

Company MCM Electronics
Listing ID 3393
Phone 800 543-4330; 513 434-0031
Fax 513 434-6959
Mail MCM Electronics, 650 Congress Park Dr, Centerville, OH 45459-4072
USA

Do you know if they have a web site?

I will withdraw the offer for sale on my VARIAC since it is apparently
not worth the price I came up with.

Thanks again - E.T.

List of the Sailor equipmen for sale:
* R1119 receiver, serial #297618
* S1300 Exciter, serial #238867
* T1127/H1200 Amplifier with remote control, serial #'s
287239 (amp), 239340 (remote)
* N1401 Power supply, serial #296016 . We have a complete
set of manuals. Copies of originals. Units seem to be
working OK. Asking $2500US + shipping

Please reply direct to:

    vo1hp@rac.ca

SPECS:
* estimated weight:
H1200 - 4.5 kg
S1300 - 12.7 kg
R1900 - 7.7 kg
N1401 - 29.5 kg
19" rack for above is 43 kg
T1127 - 20 kg
19" rack for above is 27 kg
 Specifications for the receiver:
* fully synthesized with frequency resolution of 100 Hz
* has speech clarifier with frequency control range of
+/-150 Hz
* intended for reception of wave types A3 (A3E), A3H (H3E),
A3A (R3E), A3J (J3E), A2 (A2A), A2H (H2A), F1 (F1B) and
2.4F1 (F1C)
* frequency ranges 10kHz - 30MHz
* tuning error less than 30 Hz
* frequency drift short time less than 5 Hz
* frequency drift long time less than 25 Hz per year
* frequency drift 0 to 40°C less than 25Hz. Also
possibility for better figures for frequency drift when
using another TCXO.
* IF bandwidth for mode - SSB/A3J:
Min. pass band at -6 dB is +350 Hz to +2700 Hz
Max. pass band at -60 dB is -300 Hz to -3400 Hz
Classification of reception old is A3A, A3J, F1, 2.4F4
Classification of reception new is R3E, J3E, F1B, F1C
* IF bandwidth for mode AM/A3H:
Min. pass band at -6 dB is +/-2900 Hz
Max. pass band at -60 dB is +/-9.5 kHz
Classification of reception old is A3, A3H, A2, A2H

Classification of reception new is A3E, H3E, A2A, H2A
* Sensitivity 20 dB SN/N:
MF, A3J: <16 dB/1 uV
MF, A3H: <30 dB/1 uV
HF, A3J: <10 dB/1 uV
HF, A3H: <24 dB/1 uV
* Adjacent Channel Selectivity:
A3J: >50 dB at -1 and +4 kHz
A3J: >55 dB at -2 and +5 kHz
A3J: >75 dB at -5 and +8 kHz
A3: >55 dB at -10 and +10 kHz
A3: >75 dB at -20 and +20 kHz
* Blocking:
wanted signal - 60 dB/1 uV
blocking level - >110 dB/1 uV
* Cross modulation
wanted signal - 60 dB/1 uV
cross modulation level - >100 dB/1 uV
* Intermodulation:
3rd order intermodulation = delta f = 30 kHz
intermodulation level = >90 dB/1 uV
* Spurious Rejection:
image rejection > 60 dB
IF rejection > 60 dB
all others >70 dB
* Automatic gain control:
AM, AGC: attack time approx. 35 mSec
AM, AGC: decay time approx. 80 mSec
SSB AGC: attack time approx. 2mSec
SSB AGC: hang time approx. 3 Sec
TELEX AGC: attack time approx. 2 mS
TELEX AGC: decay time approx. 80 mS
* IF frequencies:
1st IF: 10.6085 MHz and 16.6085 MHz
2nd IF: 600 kHz

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=156351472

Get a great deal on this unit! Bid now stands at "only" $20!

Final day of auction. Audio Processor/Compressor and phonepatch in one unit! Give your HF rig's audio a little more punch and add a phone patch at the same time.
This is the Waters Universal Hybrid-Coupler Model 3002. It includes full

phone patch capability and in addition, it incorporates the Waters Compreamp, speech processor/limiter in the output circuit. It operates either VOX or Push to talk. This unit will compliment any station especially the Collins KWM-2/2A. If you have no particular need for a phone patch, the compressor/limiter feature itself is a great reason to bid on this unit. Comes complete with original manual.

3147. Wanted Valiant Parts Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-05 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <37D3480A.55E9@ix.netcom.com>
Source record: 79483

I have Three Valiants which I am restoring currently. I need one parts rig in order to get three on the air. If you have one that's just rusting up or collecting dust in the garage please drop me a line. I had two of them that had transformer damage by UPS. The HV transformer broke loose and destroyed several parts. The other one has a bad mod transformer. Thank you, 73 Chris VE3NGW/W4 Florida

3148. Re: kwm-2a problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-05 00:00:00 UTC
From: "Robert A. Poff" <wb3awj@blazenet.net>
Message-ID: <37D33C0D.F8E6430D@blazenet.net>
Source record: 79484

Collins Service Bulletin # 6 says:
"A few transceivers may exhibit indications of a delay in operation
when switching from transmit to receive function. This delay of from 20
to 30
seconds may be caused by screen grid emission of the PA tubes."

They go on to describe a test procedure to determine if this is the
problem.

While they refer to a delay of 20 to 30 seconds, it still might apply to
your rig.

The fixes are (1) replace the 6146's (kinda hinky if you ask me)
(2) add 1N1490 in series with the screens.

If you send me your address, I'll make a copy of the SB and mail it to
you.

Also, go into the VFO and hit the VFO bandswitch with some DeOxit. Often times, this switch seizes up a little, and that's the root cause of the slippage with the mechanical linkage.

Source record: 79395

Wish I could ship, but have no time. Also I would rather sell to an active BA ham than a "collector" -

Reason being, I want the buyer to check the gear out HERE and make sure it is satisfactory before buying it.
Everything works and looks good; there may be some blemishes here and there, and I cannot guarantee things
like sensitivity on receivers or "full output on 10m" on transmitters.

Again, pick up only - sorry, guys.

Combos:

Drake R4B/T4XB/AC3 or 4/MS4, looks very nice and clean. Working of course. Extra crystals. Some wear around tuning dial on receiver. Unable to really use. $325.00

Transmitters:

Elmac AF67 with AC PS. Works. Unmodified. Looks "decent" no butchering done; sounds fine on 160, 75 and 40. No time to play with!
$125.00

Johnson Viking II: Very clean and nice. Unmodified. With 122 VFO. Used regularly on 160, 75 and 40. No PTT, no audio mods. I have books somewhere.
ALSO COMES WITH another Viking II and 122 VFO which is probably working - looks a bit grungy but has PTT, it's complete, was gonna use for parts rig but it would be better really to fix it up. May need some work, or use for complete set of parts.
Total (prefer not to split up) $200.00

DX100: A very nice DX100 in original cabinet. No special mods, stock audio. Used on 160, 75 and 40. $135.00

HOMEBREW pp 813 AMP: 80 - 10, professionally built, in two 3' 19" cabinets (one RF, one PS) works on 117VAC. Currently driven by a Viking Ranger II
with modified audio (sorry that is not for sale) Has muffin fan, HV variac (1300 - 3000VDC), excellent metering. With Ranger final resonant current at about 120 mA amp puts out at least a 375W carrier. I use it on 80 and 40; will work on 20, and anyone who knows 813's knows that for 10m you gotta be careful, so I never played with it up there. $650.00

4-1000A RF deck with tube, vacuum variables, B&W turret bandswitching 80-10. Have bias supply for it too. Professionally built. No P/S though.

If you have PS components this would make a great big linear. $350.00

4-400A RF deck with tube, input C on pi is vacuum. 160 ONLY. A great single band linear; just needs PS and bias voltage. $250.00

Cabinets:

HUGE 19" double rack cabinet, about 6' high, equipment can be mounted front AND rear. Surprise your friends! Let them see you've got TWO big stations in 1 cabinet! Nice looking industrial surplus, on casters. $100.00

Receivers:

Hammarlund SP600JX (I think 17) has the red knobs, also has an IF GAIN control (not seen too often) panel definitely needs repainting, some minor slippage on dial rim drive but sensitive and everything works. Drives a large high efficiency speaker very nicely. Rack mount, no cabinet. Panel needs refinishing. Has chipped and missing paint here and there. But nothing broken or missing! Not good for pretty, but good for strong! :) $225.00

HRO60: Very nice looking National HRO60, everything works very well. Xtal cal puts out 1000KC but not 100kc. Have a 100kc xtal for buyer to play with. Extremely sensitive and excellent selectivity. S meter occasionally sticks on high end; every once in a while there is some noise with no ant.connected (probably cap leakage) but reseating a tube or two gets rid of it completely.
Former owner put a product detector in NBFM plug inside;
there is a nicely installed toggle switch just to the right of the "Sixty".
Has A,B,C,D coils PLUS E & F coils (with dial scales!) the
E&F are actually HRO50 coils but obviously they are perfect for the 60.
Also has matching large National speaker (with a replaced
driver some time ago) and manual copy.
Because of everything going together on this one (WILL NOT
SEPARATE COILS OR SPEAKER) price is $600.00.

Hammarlund HQ170 with Telechron clock, and manual. (copy) Works very well, Quite sensitive, sounds excellent. looks good. Too many receivers. $225.00

RCA AR88LF This is a very nice RCA WW2 receiver, looks excellent EXCEPT that the two chrome strips need re-chroming. Right now they are down to the copper, which actually looks very nice indeed. No S meter (very few 88's had Smeters) but a helluva nice receiver. Works quite well; sensitivity could be improved by some alignment and recapping but it does work as is. With AR88LF cabinet (still allows rack mounting. $275.00

Transformers:

Thermidor 500W mil surplus mod xformer. $100.00
T-368 mod xformer $100.00

Again sorry have to say PICK UP ONLY. I'm in South Central CT about halfway between New Haven and New London, about 10-15 min off Route 95. E mail w1ux@tinyradio.com

Hi all,
I bought transmitter and receiver set of WWII/Korean war used for spy mission. This is SSR-1-G receiver, 5 tube (loctal tubes) Superhet and transmitter which has only one 6L6GA. It covers 2.5 to 16.5 MHZ in two bands. Anybody has soem history of this radio? I am looking for the schematic diagram for receiver and manuals.
Thank you

3174. HQ-145 and HQ-160 Boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-06 00:00:00 UTC
From: John Morris <moe@email.msn.com>
Message-ID: <OUMSyvJ##GA.96@cpmsnbbsa05>
Source record: 79400

Does anyone know the approx original selling prices of the above receivers.
The HQ-160 is a better receiver, I think, but the prices will give me more
of a clue. Specs are better on the HQ-160 but also a couple of years older.

Thanks

John

Hi all,

Anyone have access to the manual of an old Heathkit HD-3030 terminal unit. I picked one up at Shelby and thought I'd play with it if I could get the wiring diagram for the 25 pin DIN connector. I fugure 2,3, and 7 for data to computer, but may read the other handshaking lines. I've found the AFSK out pin, but not the AFSK in.
I'll be happy to pay copying and post for this.

I have the following ARRL publications for sale:
All are in good shape, some almost like new.

1984 ARRL Antenna Book - 14th edition - $ 10

1977 Understanding Amateur Radio - appears to be First
edition - almost like new - $ 12

1977 Solid State Design - appears to be first edition - $ 12

1976 ARRL Electronics Data Book - first edition - $ 10

1984 AX.25 Amateur Packet Radio - Ver 2.0 - $ 7

1984 Satellite Experimenter's Handbook - First Edition - $ 10

1977 Getting to know Oscar - First Edition - Like
new condition - $ 8

1976 ARRL Ham Radio Operating Guide - first edition - $ 8

1972 Radio Amateur's Operating Manual - 3rd edition - $ 5

1986 Tune in the World with Ham Radio - 6th edition - $ 5

1991 Now You're Talking - First Edition - $ 8

1993 Now You're Talking - 2nd edition - $ 12

1976 Radio Amateur License Manual - 75th edition - like new $ 10

1993 FCC Rule book - 9th edition - $ 4

1987 FCC Rule Book - 7th edition - $ 4

1979 ARRL Handbook - $ 12

The ARRL Training Program - Official Novice Student Workbook
No date or edition listed, but appears about 1985 $ 3

Booklet to go with ARRL Code kit - 5 to 13 WPM - $ 1

Repeater Directories - $ 3 each
1978-79
1979
1987-88
1989-90
1990-91

Operating an Amateur Radio Station $ 2 each
1969 - 52nd edition
1980 - 59th edition
1984 - 62nd edition

Public Service Communication manual
no year listed - prior to 1970 for sure - appears to be
first edition $ 3
1985 9th edition $ 1

1974 Ameco Radio Theory Course $ 5

I have found some older ARRL net directories. All are in good shape.
Those in the 70's are $3 each, and those in the 80's are $2 each.

I have the following years are available:
75-76
77-78
78-79
84-85
1989

Although not directly radio related, someone might be interested

Handbook for Patrol Leaders (Boy Scouts) - 1950 copyright -
1959 printing $18

Exploring (Boy Scout Explorer handbook) 1958 - $ 12

Handbook for Scoutmasters (Boy Scouts) - 1947 copyright -
4th edition - $ 18

Scout Field Book (Boy Scouts)- 1948 copyright - $ 18

Brownie Scout Handbook (Girl Scouts)
1951 copyright - $ 15

1986 American Red Cross "Expect the Unexpected" $ 2

Prices do not include shipping from Florida.

Thanks.

Tim, I remember seeing a full blown schematic of a 4-1000, 80-10 meters amp in one of the ARRL Handbooks. It was a complete build it yourself project. I have not been able to locate the exact year, but I'm sure if you call or write to the ARRL they would be able to lead you in the right direction. Just a thought. Good Luck with your project.....Gary

Hey Tim,

You may want to take a look at the "K2RIW" type of VHF/UHF
amps, they used 4X150's on 2m and 432. Really slick screen protection
And control circuits. Just adjust the voltages to fit your "jug"..
I applied the above concepts to a 4-400 that I used for rtty and SSB
on 80-10m. I could run my SB-104A at 5 w, out on rtty and got about
300 watts outta the 4-400. Worked alot of europe and Africa with my
model 22 tty. (Then the kids were born... oh well)

3193. Impressive HF Multicoupler on Ebay

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-06 00:00:00 UTC
From: nanu37@yahoo.com
Message-ID: <37d43d94.3271615@news.interport.net>
Source record: 79419

I happened upon a multicoupler with interesting specs while perusing
Ebay. Take a look at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=157114941

The specs are more like that of a Xmtr. than a multicoupler.

Nanu

3194. FS: Military Test AN/USM-324

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-06 00:00:00 UTC
From: zeitler@ibm.net
Message-ID: <37d482a3@news1.prserv.net>
Source record: 79420
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have the following pieces that together make up the military AN/USM-324 Spectrum Analyzer Set. The USM-324 is used to set up, monitor, and adjust SSB xmissions.

Signal Generator SG-864/U
Static Frequency Converter CV-2633/U
Spectrum Analyzer TS-2884/U
Radio Frequency Tuning Unit TN-523/U

Here are the specs of the USM-324:

Freq Range: 10hz to 40mhz
Fixed Sweep Widths: 150hz, 500 hz, 3.5khz, 7.0khz, and 14 khz.
Variable Sweep Widths: 0 to 100 khz
Sweep Rates: 1.0 hz for preset widths of 3.5 khz and above. Sweep rate is 0.1 khz for preset sweep rates from 150hz to 3.5 khz
Hum and Noise Level: 60dB below fundamental
Intra-Unit Impedance: 50 ohms
Equipment Under Test Output Impedance: The spectrum analyzer set can match 600ohms balanced or unbalanced and 75 ohms unbalanced inputs below 2 mhz. 50 ohms nominal from 2 mhz to 40 mhz. I do not know if 160 would come in under the wire here or not. High Z inputs operate from 2 to 40 mhz.

Cosmetic condx is excellent. Price for the package UNTESTED and sold AS-IS is $350.00 plus UPS ground charges. The weight for the set is approx. 112 pounds shipped and boxed up. I will professionally pack all the pieces.

Please include your name, call, and zip code when replying. I have references available on how I do my packing if you need a comfort level, hi.

All technical manuals for each piece are included and are in outstanding condx. This equipment belonged to a DOD contractor who is now in a retirement home. This gear is approximately circa 1969. As reported by the previous owner it was all 100% operational but has not been verified since picked up at his home. This is serious test equipment for the SSB op. Granted it is rather old but with all the documentation that is included should be realitively easy to align and troubleshoot if needed. All pieces mount into a 19" rack which is NOT included. I believe this set was used on shore based HF communication stations.

I figured that I would go through the stuff and get it all set up here in the shack but I just do not have the time and I really do not have the need for this type of test equipment (at least not right now).

73s and thanks for the read.

3198. updated re: Johnson Ranger Help Requested

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-06 00:00:00 UTC
From: Koehl House <lkoehl@ce.mediaone.net>
Message-ID: <pgLA3.5224$1a1.252822@elnws01>
Source record: 79424

Well Tom, folks, I may have missed the most likely cause for this problem... band switch linkage.
I have looked at the manual for the Ranger-1. I forgot to tell you that the vfo tank is actually two (2) discrete tanks: L1A-C1A tunes 7.000 - 7.425 Mhz and is multiplied on the 20, 15, and 10 M bands; L1B-C1B tunes 1.750 - 2.000 Mhz and is multiplied on 80 M. (C4 pads the C1 caps in the 11M position.) These tanks are switched via SW-1. SW-1 is driven off a double-pinned arm (D1, attached to the shaft of SW-3) that engages either of two angled slots on a square block (D2) attached to the shaft of SW-1. These slots are engaged in the transition between the 40 and 80 M bands. (You can feel and hear the additional action during the transition from 40 to 80, or 80 to 40.) If this block or the pinned arm is slipping, or not in synch for the transition, then the 160 M tank will not be switched into the curcuit, and operation on 80M and 160M will not be possible. Reposition the block (D2) and/or the pinned arm (D1) so that they engage during the transition. I recall setting them in the 40M position. The pin is just outside the slots when the switch detent is on 40. You
may have to play with this a little. The Installation and Operating Manual (date/version?) shows these two mechanical links as D1 (drive arm) and D2 (drive cam), figures 2 and 4B.

Hope this helps,
Good luck,
Dick K9FFK

Greetings, all:

I need info on an old Kenwood TM-701A dual bander that I picked up recently. I don't have a manual, and would like to acquire one. Barring that, I'd like info on how to program a PL and save frequency and PL to memory. I don't even know if this rig had a PL encoder installed...was it an option? I can get a "CTCSS" line on the display, but have no clue as to what tone is transmitted or how to change it.

This rig also has the RC-10 remote controller (looks like a telephone handset) installed. I'd rather have a basic hand mic...anybody have one that will interface this radio?

I'm not very familiar with older Kenwood stuff, and ANYTHING I can find out will be greatly appreciated!

Thanks in advance!

Howdy Mike....The simplest way to ascertain whether your RA17L is up to par is to compare it to another one - same location - same antenna. Otherwise, you could study up and equip yourself with a bench full of signal generators, rf voltmeters and scopes BUT the REAL TEST is whether the receiver is ACCEPTABLE to YOU. Components like valves can be checked with a tube checker etc.....Electrolytics, bad, will show up as being deficient in their job...(hum if used as power supply filters.....low audio gain if used as cathode bypass in an AF amp etc). One golden rule I can pass on to you, really regarding troubleshooting and repairing ANYTHING, is to make ONE change / repair at a time unless its absolutely obvious whats wrong....else you may never know which change made which affect!

By the way, I had the pleasure of spending an evening behind a RA17L with a buddy of mine who collects receivers in general - SUPER! The only "fault" I could find with it was the low level / fidelity audio but that was pretty minor. I compared it against his HAMMARLUND SP600JX and found them similar in sensitivity, and general performance (if that helps). You've got a good one there.

So is mine :)

Now with respect to the thread, Carl I agree with your comments regarding technology, keeping up, etc. I have built a couple one tubers for fun since I missed the days of tube rigs and wanted to get a taste of what it was. The biggest hurdle I see is that there was a time when you could build from scratch a rig that was commercial grade or close to it, if we look at the level of technology today it is near impossible for someone to just 'pick up' and start building using the current state of the art.

What I mean by this is, looking inside my radio today I see microprocessors, dsp's etc. and that's great but if I *really* want to build using state of the art chips I need to learn the current assembler or have a C compiler for the latest chip, I need a prom and or micro controller burner and the appropriate software much of which is specific to the controller or chip. I need to have boards etched to accommodate SMT parts because etching them and drilling them myself is beyond the capability of most homebrew PC board techniques, and even if I spend the money to invest in all this technology so I can further the state of my amateur homebrewing the chipsets I have purchased equipment for will be obsolete in a few years and I once again need to spend money to keep up. There was a time when one could have built from scratch a radio to match the quality of a Collins or other commercial grade radio, all you needed was the parts and a schematic. So in that time your building could have been state of the Art 'Collins' :)

Additionally, starting in this hobby as a Novice I've learned a whole lot over the years and just started hombrewing in the last 7 or 8 years I haven't the knowledge to build FT-1000 so I rely on existing schematics and available components none of which really use state of the art components so what else can I do?. I've built a few superhets using 602's but those of course are obsolete for all practical purposes. I'm just getting an understanding of mixing, LO's, VFO's so for now DSP's are a bit out of my league right now, but I'm trying.. While I'd love to understand the operation of all the chips in my Alinco DX-70 unless I'm somehow in the business the return on my invested time is very low. I think were

asking to much for radio amateurs to keep up with a technology that was once moving along with us but is now screaming ahead at light speed.

Your thoughts?

Ohhhh, more wonderful junk for sale.

Waltham aircraft clock, type A-13A-1. Works, but is missing seconnd hand (maybe it never had one??). Paint shows normal wear. $35

Radio Filter, FL-8-A. One of the mounting feet is missing. $5

Oil-Filled filter caps:

1 8uf@2kv $5
2 6uf@2kv $4/ea
5 4uf@2.5kv (not all the same case) $5/ea
2 2uf@2kv $3/ea
1 1uf@3kv $2

Or $35 for the whole lot.

Prices do not include shipping (from zip 98072). I have a couple of neon sign transformers, insulators, and other high voltage parts as well. Inquire with your needs.

3228. SP-600-JX21 Question...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-07 00:00:00 UTC
From: maxstvs@aol.com
Message-ID: <19990907101914.01044.00002100@ng-cl1.aol.com>
Source record: 79432

Hi,

Awhile back I picked up a non-working SP-600-JX21 and just recently started to explore the problems... Once I got the audio working I found that everything else seems to work except the strange thing I encountered was the fact that the Band indicator and dial pointer do not correspond with the band you are actually listening to. For example, the .54-1.35Mhz band is received in the 7.4-14.8 Band position, the 1.35-3.45Mhz band is recieved in the 14.8-29.7Mhz position, etc, etc. The dial pointer and band indicator parts and linkages do not appear to have been tampered with, however it does apear that the top cover over the tuning capacitor and the bottom cover over the tuning unit have been removed in the past. Being that the dial pointer/band indicator and the actual bands received appear to be out of sync by 3 postions (180 degree rotation) is it possible someone screwed up and positioned the tuning unit turret out of position? Other than the covers being removed I can't see any other obvious signs of tampering...

Anyone have any ideas or suggestions?

Thanks,
Brian (KB8IIC)

3229. WTT: Allocchio Bacchini AC-14 receiver

Newsgroup: rec.radio.amateur.boatanchors

From: Claudio <cmar@datamat.it>
Message-ID: <7r3822$47rm$1@stargate1.inet.it>
Source record: 79433

Hello,
the Allocchio Bacchini model AC-14 that I've is a rare example of pre-war
italian radio equipment.
The equipment is not in good conditions, perhaps due to the age...however,
the guy who has given it to me, said that was all ok...I never fired it up
but I think it's perfectly restorable, so I swap as-is...
I'm interested in swap it with these receivers:
-Eddystone 830, 840, 880, etc.;
-Collins 51J-4;
-Hammarlund SP-600;
Obviously I'm available to balance the equipment value if
necessary...Pictures on request by e-mail.

This is 50's vintage and covers 75/80 and 40 meters. Its crystal controlled but will also accept an auxiliary tuner front end. Rack mount military styling and the last time I turned it on it worked ok. AM/SSB/CW with nice big "S" meter. This receiver has a lot of bells and whistles on it for its day. Cosmetically a 8.5 on the scale of 10. Dimensions are about 8" tall // 14" wide // 10 " deep. Weighs in the neighborhood of 20 pounds. Shipped to your door $85

Source record: 79435

Lytics are usually easy to spot, either the set hums cause they're drying out, fuses blow cause they short, or sometimes you look at them and see they are spilling their guts through the vent hole.

Their condition is usually more determined by age than useage. Also, radio's stored in attics or garages tend to have bad ones.

In my business, we service electric utility stand alone controls that are mounted in cabinets on utility poles or outside in substations. We find lots of bad lytics, and our re-repair incidence is very low because we replace the lytics in any piece of gear that is over 5 years old.

Some lytics are available with a 105C temp rating... they are superior, but of course more costly.

When I rebuild a BA, I follow the same procedure.

As a note, when firing up a BA after long storage, it's best to bring the voltage up slowly on a variac to "re-form" the old lytics. This will help prevent a short which could take out other circuit components.

3232. HELP - How to clean-up leaking Paper-in-Oil Cap.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-07 00:00:00 UTC
From: Andy Cowley <andy@btc.uwe.ac.uk>
Message-ID: <37D53800.167EB0E7@btc.uwe.ac.uk>
Source record: 79436

I just acquired an old signal generator and it has a leaky paper-in-oil cap in it. About a 2 inch cube - it's a TCC 4uF 400V DC B+ smoothing cap. It has leaked oil onto a small area of the chassis.

I'd really like to clean it up and get the sig gen going again. It is almost certainly polychlorinated biphenyl as the set was made in 1950 and appears unmodified.

Best advice so far has been to remove the cap and local cloth insulated wiring then use white gasoline to clean up the spill, saving all the washings, let the gas evaporate and then dispose of the lot to a local hazardous waste handler.

Other suggestions have included

Dump the whole thing
Call the fire brigade

I'm not in the US of A so I don't have the EPA to worry about but I want to be reasonably responsible about this and _fairly_ safe. I plan to use polythene gloves and to wash the tools used in gas. Is this a stupid idea, am I being over cautious or what?

Feel free to express your ideas as I'm not about to say "so-and-so told me it was O.K. to ..." I like to take responsibility for my own mistakes.

I've done a web search but there is a lack of practical advice. LLNL has some good stuff but doesn't go into specifics about the clean-up. Please e-mail me a copy of your response as I don't always have time to read the whole of boatanchors.

TIA

Andy Cowley

I've always wondered, is it more common amongst restorers to replace the tube rectifier with a solid-state plugin to do this, or to just leave the tube rectifier in place and get it just-hot-enough-to-conduct? I've always done the plugin, only because it seemed "obviously" necessary, but maybe I've been making things too complicated?

<snip>

Brian:

If the receiver works on all bands then the turret should be OK. If it is out of sync with the single/double conversion switch it wouldn't work on all bands. It's been a long time since I had the front panel off my SP-600, so my memory is a bit fuzzy. I bet that cam arrangement that moves the band indicator and dial pointer is out of sync with the turret. Check it out very carefully. I wouldn't mess with the turret unless I was sure that was the trouble. The alignment of the turret is quite critical.

Depends on your goal - if trying to maintain originality, stick with tubes - for reliability and reduced stress on filament transformer, go for the solid state replacements - just be sure to also install a dropping resistor to bring DC voltage back down to proper value...

For sale, one ~1951 vintage US Navy R-366/TRR-5 general coverage receiver that covers .54 to 30 MHz in five bands. This radio was used for entertainment purposes and is truly a monumental piece of equipment. Weight is specified as 85 pounds and the cabinet is 14" high, 19 3/4" wide and 19 3/8" deep. The R-366 has 16 tubes with two RF amplifier stages, two IF stages, crystal filter, a four gang tuning capacitor, and push-pull audio output. All of the tubes with the exception of the rectifier are "minature" type (6BA6, 6AQ5, etc). I have owned it for about 20 years and I am thinning things out prior to a house move. The radio is nearly bone stock except for the addition of an antenna trimmer circuit and this is easily removable if you wish. Most of the original paper capacitors have been replaced and the radio works very well. The radio's front panel is very nice, there are scratches on the top and sides. I don't know what it's worth....it ain't no 51J-4, but it is not often seen....so I'll ask $175. Shipping is out of the question. I am located in the Detroit Mich area. On 12 Sept, this radio may be brought to the Findlay Ohio hamfest. Phone me at 313-382-2213 after 4PM EST , 313-317-2398 days, or reply to XYZ_p15218@flash.net but remove the XYZ_.

73,
Bob

$150 - 200 tops. Keep it in a range that someone who really wants it (not me) can afford it. Just my opinion . .

The "plugin SS diodes" method is _much_ gentler on the caps,
you can really wind them up slowly (This presumes you are going
to use a variac). Just stop when the B+ gets to the design level.

If you don't have a variac then putting a 100K resistor between
the cathode of the rectifier and the first smoothing cap and
disconnecting the load works well, it limits the current the
caps can draw to a safe level _and_ provides a good way of
measuring leakage - the voltage drop across the resistor is
a direct indication of the leakage - and the caps are reformed
when this voltage approaches to zero. DONT use the SS-diodes for this
as you will get a considerable overvoltage.

I found the most common problem for this was the old electrolytic capacitor
in the RC network of the unijunction ramp oscillator. Just try replacing
that capacitor and see what happens. Good luck.

There are a number of "secondary" functions that you access by holding the function button until you get a double beep. I can't recall all (as I just sold the radio), but here's a couple I remember.

F (1 sec) then VFO: Changes scan mode from 5-second pause on an active channel to pausing until activity ceases.

(I think) F (1 sec) then MR will skip the displayed memory during scan. (it puts a star or removes the decimal point...I can't recall which).

Also, there are three scan modes. When you are on a VHF (or UHF) memory channel, pressing the MR (or UP or DOWN on mic) for more than one second will start scanning THAT band. After starting scanning, press the BAND button and it will scan all memory channels on both bands. Another handy scan feature scans between one VHF and one UHF channel. Set the radio on the VHF memory (or VFO) frequency, then set it on the UHF frequency. Press and hold the BAND button for more than one second and it will scan between those two frequencies.

You can band scan by pressing and holding the VFO button until scan begins. Alternately, you can press and hold the UP or DOWN button on the mic when the radio is in VFO mode.

Note that scanning is rather slow.

The Duplex button allows you to listen on one band while transmitting on the other. I never found it too useful, but it can be used for cross band repeat (see below).

The radio can be modified for extended transmit (If not already done). Open the top (with speaker...I think) and you'll see a loop of green wire coming from the area of the front panel. Clip it to enable it.

THere is also a cross-band repeat feature that requires a mod. The mod (and the above one) is on QRZ.com.

Nice radio!! BTW: I seem to recall that it did have PL decode as well as encode. Could be wrong here!

email if you have any other questions.

Mark

I am looking for components that make up an airborne adf receiver system ARC type R-21A. This system was made in the early 50's and was comprised of a "coffee grinder" tuning head, bearing indicator, loop antenna, dynamotor, power supply and receiver. The one component that I need more than the others is the receiver box, part number R-30 (A). If you have any of this stuff and would like to see it go to a good home, please contact me.
Regards
Dennis W6DEN

>Anyone know when the next swap is around Detroit area??? Jack K8BVJ

Isn't the L'Anse Cruese High School (Mt. Clemens) one coming up, or has that one passed by already?

I think that there's also one coming up in Adrian, but you may or may not consider that to be in the "Detroit area"... I'm in western Wayne County, so it's kind of right on the border for me.

I remember that they used to have one in Southfield sometime in November, but I have not been to that one in several years. After that, it would have to be the Livonia ARC swap in Dearborn that's always in February... then Dayton again ("area" has no meaning when it's Hamvention time :^))... then Monroe County Fairgrounds on Father's Day...

3265. SX-99 manual & kinks

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-08 00:00:00 UTC
From: Bismarck Wichy <wichy@dallas.net>
Message-ID: <rtdta4gv1iv47@corp.supernews.com>
Source record: 79334
Body handling: Binary attachment payload not displayed: audio.JPG

Got SX-99 manual scanned in Jpg images. Anyone need a copy please email to:

wichy@dallas.net

...and I'll send them a copy.

Picked up an SX-99 at Gainsville TX hamfest a few weeks ago. This one is in excellent minty shape with the matching R-46B speaker. It had one minor problem.. after 30 minutes of operation the audio would become distorted suddenly. It work work fine until then. Took me a whole day to track it down. Problem was at an interstage isolation capacitor C45 (.022 mfd). It was an infamous "black beauty" that decided to drift when the temp got too hot. Replaced it and everything is A-OK.

... but had a chance to do some experimenting while I was in inside.... so here are the results..

(1) Did not like the audio tone. R-46B is a big speaker can only reproduce midrange and bass freqs. Audio is basically communication quality... I added junkbox caps at the point shown in "audio.jpg" and found I could change the tone of the audio. I found an unmarked disc that made the tone extra high so that when it gets to the big R-46B it sounds very good. The SX-99 has tone controls but they make the audio sound muddy. If you have an RX and don't like the audio - you might want to try this kink.

(2) CW was hard to copy and SSB was very distorted. This is a common problem with old RX's using envelope (diode) detectors. They use a 455 kc Beat Freq Oscillator (BFO) to provide a carrier to SSB and CW signals. The BFO in the SX-99 is part of the pre-amp audio stage 6SC7 double triode tube. One triode is used as a 455 kc oscillator to beat against the IF. It is coupled through a gimmick cap - a shielded cable with 1/4" wire sticking out near the last IF transformer. That was where my problem was - not enough BFO coupling. Took a screw driver and slightly pried the wire up - now SSB and CW sound great. S meter shows about 20-25 over 9 when BFO is switched on. You will have to experiment with this setting. Too much and only strong SSB stations sound good and average stations sound weak or just covered up. Too little and weak stations sound good but average and strong stations sound distorted.

If you have SW RX with this BFO problem you might want to check where the BFO is injected into the IF and see if you have too little/too much. These circuits are pretty common in 50's-60's SW RX's.

Overall the SX-99 is a wonderful SW RX and a pretty good performer on the ham bands. Oh yea - gonna hook it up with an ECO 723 CW TX and a straight key... a setup any teenage Novice would have been proud to own in the early

60's.

Hi,
I have NC-173, clean dial, clean S meter, good chassis but somebody painted black,all the tubes., all original knobs, matching speaker also repainted. Not working. I am asking $135 plus shipping from Northern CA.

Carl R. Stevenson <wa6vse@fast.net> wrote:
>SMT (surface mount technology) isn't any harder to work
>with than through-hole parts ... it just takes different tools
>(not a fortune in them, either) and different techniques.

That is true. Now, let me describe this neat little problem
and muse a bit over how to solve it. I have been building circuits
for around 40 years and am glad to be old enough to appreciate how
far we have come. As a person who is blind, I don't read schematics,
but it is possible to build some pretty neat stuff these days with
IC's, perph board, and judicious use of wire-wrapping and soldering.
As I mentioned several months ago in a thread about home brewing, I
usually solder the wire to components that have round leads because it
sure won't stay any other way. I use a Wahl cordless soldering gun
with the thinest tip they make as it heats up very fast and hot.

I can even do point-to-point wiring on IC sockets that have
.1-inch centers if I hold my mouth right and work carefully and
slowly, but I honestly don't know what to do about surface-mount IC's.
I am not ranting, here, because I don't believe surface mount IC's
represent anything but an attempt to make manufacturing easier,
cheaper, and smaller, but the spacing between the leads is so small
that it just feels like ridges along the edge of the chip and one's
finger nail could easily bounce over two or three while trying to
count.

I have seen adapters such as those used to adapt a 52-pin PLCC
to through-hole design such as one might use in building a 68HC11
project, but these sockets are expensive and only seem to come in
certain common sizes. There seem to be tons of different footprints
and numbers of pins in surface-mount IC's. They definitely don't all
look alike so it is going to require several different styles of base.

When thinking about this problem, some ideas come to mind. I
know that anything to do with microscopes, magnifying glasses, etc is
completely out of the question. Some other things are maybe possible.
Let's say one had a piece of circuit board with the SM footprint on it
and conductors going to some kind of header. It should be possible to
use electrical continuity to tell when the chip is resting squarely on
the right bed. Then, you have this magic glue:-) that doesn't stick
until you have moved everything around and are satisfied with it.
Then you do something like heat it to activate it and it doesn't flow
any conductive material between the pins to cause bridges.

I have heard some real-life examples that sound pretty strange. One case I know of involved a repair to a cam corder. The technician removed the bad chip and put the new chip in by first flowing solder over each edge of the surface-mount chip until every pin was soldered together. Then, he took very fine solder wick and wicked up the solder between pins. Of course, that was a magnifying glass job, but the point is that there are lots of unorthodox ways to work with these chips and I hope I find something that will work because I would really hate to not be able to build anything out of new parts some day.

I definitely agree with those that say that these are the golden days of home construction. I mentioned not reading schematics, but the more or less standard IC's such as logic chips and amplifiers allow one to build fairly sophisticated circuits by just knowing what signals and components are supposed to connect to each pin. The circuit sort of builds itself if you know what you want it to do and also keep in mind the electrical limitations of the IC so as not to fry it.

Back in the sixties and early seventies, it was not as easy to build circuits without a schematic because one had to manually do so much more just to get a simple amplifier or oscillator.

The last project I finished and got working was an audio peak-level alarm using a TLO64 quad op-amp, a LM339 voltage comparator chip, and a NE556 timer chip to produce the alarm tone which fed one of those piezo sounder disks which I stuck to the bottom of the chassis box the circuit is mounted in. I couldn't possibly have built this device and had it work as well as it does had I not been able to stand on the shoulders of the engineers who made the chips, so to speak.

the first number is the hammarlund part number. The second is the R.E.T.M.A. coded number signifying manufacturer and a date code. The first three digits are the manufacturer code and they are different for each manufacturer. The second three are a date code which is a little work needed to figure it out, The first digit of the second three stands for a year. This could mean 1933,1943 or 1953. you have to know when the unit was in production for this to help. The second two tell you the week that the item was manufactured.Your info shows all part numbers and manufacturer I.D.'s matching with only the date codes changing just as they would so any of the other trannies will be just fine.

This TR4C Station is in very good looking and good working condition.
All original and on the air. 8.5 out of 10. Comes with a good copy of
the manual and a handmic. The receiver is very sensitive on all the
bands and the transmitter sounds good using three 6JB6s in the output.
Just plug in the mic and you are on the air with full output 80 through
10. $295.
I have JPGs available if interested. 73 Chris VE3NGW/W4 Florida

Well, we didn't have "Saran Wrap" then or Reynolds wrap either, but wax paper and tin foil worked just fine.

Far as the center post of a dry cell, don't knock it; you can make a pretty fine adjustable dropping resistor out of those, even today. ('cept there aren't as many old dry cells lying around these days)

Meanwhile I guess I'll make a few contacts on my "Rice Box". [...for a long time, I thought we won that war!]

Rolling your own is an interesting topic. One of my favorite sections of Clayton Hallmark's repair book is where he describes tricks & substitutions used during WWII to keep radios working in the absence of factory parts. (Not all of his suggestions are great, though. For instance, he recommends fixing torn speakers with masking tape -- a temporary repair that will fail when the tape dries out.)

We're all familiar with combining a pair of capacitors or resistors to get a new one of the needed value. I'd love to hear about other tricks that help you get by when some critical part is not available.

Hi Gang...

I am relatively new to the list and have been enjoying its high signal to noise ratio... Name is Bruce - KL7H and live near Fairbanks, Alaska...

I have an HQ-170A on the way to pair up with my Viking Ranger II for my main Boatanchor position... The HQ-170A is missing the Calibration Set knob, I wonder if anyone on the list might have a parts radio and be willing to sell me that knob ??? I am also looking for the plastic meter cover for the Ranger II, mine is cracked...

What is the best /safest way to clean a meter face that has started to yellow slightly ???

Thanks in advance for any and all help... Take care and have fun...

All,

I have updated my web page with some very recent photos of
Wes Schum (Central Electronics founder), Joe Batchelor (lead
engineer at Central Electronics), and Nick Tusa (leading expert
on restoration of the 100V/200V). The URL is:

Greetings, all...

I'm looking for scanned photos of

Knight Span-Master
Lafayette Explor-Air

...any known to be out on the net? I'd also like to use the pics in
a web page, so permission from the owner of the photo to use it is
A Good Thing.

(Okay, they're not R-390s but when they were your first receivers,
they're remembered fondly.)

Thanks,

Eric

Thank you, a BIG thank you to all who responded to my query on a CW reader.
I had so many replies that my ISP threatened to cancel my account !!
Unfortunately it isn't going well with Louie, ZS1HE, and although I now have more than enough resources, from all reports he is beyond using them.
At least these last few days confirmed the knowledge that there are many people out there that care about other people.
Thank you again, all of you.

I'd go a bit higher, in the 200-250 range, in the condition you describe. That is the range I see them go for on USENET in VG to E condx, and would offer that to you if I had the cash right now.

Watch out especially for the nice-looking black tubular electrolytics that have each end sealed up with red or yellow goop. I've seen exactly one good one and dozens of bad ones.

Source record: 79194

HI,

Do you have any suggestions for textbooks or articles covering
detailed information on designing tube type receive mixers for H.F.
radios?

I'm looking for detailed information on how to design the circuit,
including how to calculate the component values, and in particular
about how to design for minimum conversion noise.

I have checked the following and although they explain how mixers
work, they don't really have design info:

Raditron Designers Handbook
Radio Engineers Data Book
1966 ARRL Handbook
17 ed. Orr's Handbook
Termain Textbook
Ghirardi's Radio Physics and Modern Radio Svc.
FBTO database search of QST, 73 etc.

Please reply to my email address.

Thanks,

B

Hi,
I have for sale a Collins 516F-2 station power supply for use with
the 32S-3 and KWM2/A transmitter/transceivers. The condition of this
power supply is CCA very good to excellent. Has had NO modifications (not even
a speaker added, as is so typical of this PS). Cords are
in very good condition (uncracked). Case has a couple very small
SURFACE scratches. Price is $225 + shipping -- I will dis-assemble
the PS from the case and ship in two boxes separately. The unit is winged
emblem. Pictures may be viewed at: http://www.papadads.com

thanks,
Joe K7JOE

Don't believe what you hear. I have all three 86 87 89. The 86 has a
bigger transformer and puts out more power. No problems ever and it's
used all the time. There is an updating list of istructions which I
have done, contact me if you need a manual and update instructions.

3372. fs- ICOM IC-730 Needs TLC, $150+UPS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-11 00:00:00 UTC
From: rlucch2098@aol.com
Message-ID: <19990910232105.29659.00007597@ng-fk1.aol.com>
Source record: 79269

Hi Fellas;
I have for SALE:
Icom IC-730 Transceiver, covers 80 to 10 meters, 100 watts out on AM, CW, SSB. The 28.000 postion is set-up for 11 meters, from 27.400 to 27.700mhz tested in a dummy load.
All seems to work but some bands seem like theres no receive, 28.000 is fine however and 100 watts out on all bands.
Have Mike, Manual, original box but no power cord, I used my Kenwood cord on it!
Price is $150+ ups
Last one sold for $375 on Ebay.
Thanks es 73....Rich WA2RQY (1961)

3376. Fisher Laboratory - Pilot 530 DX - DF (What do you know?)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-11 00:00:00 UTC
From: "Kevin D. Murray" <murray@spybusters.com>
Message-ID: <37D9E537.56904089@spybusters.com>
Source record: 79273

I am in the process of restoring this marine DF radio and would sincerely appreciate any information you may have or know about this unit. Fisher Laboratory has already checked their archives for me with no results. The unit was made in the 40's and used into the late 50's. I can email pictures if this would help jog the memory.

A schematic / manual (copy) would be very helpful, as well as anecdotes from anyone who remembers using one.

Thank you,

Kevin

3383. FS: Excellent Kenwood PS-50 Power Supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-11 00:00:00 UTC
From: Jan N0JR <swanman@cfu.net>
Message-ID: <37DA71C0.A04A9969@cfu.net>
Source record: 79280
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

This is my Kenwood PS-50 heavy-duty 20+ amp power supply with built-in silent cooling fan and DC connecting cable, plus separate output terminals capable of up to 16 amps.
The PS-50 is the power supply that was sold with the Kenwood TS-440 transceiver, but was designed easily to power ANY Kenwood rig (120/130/140/680/430/450/850/570/870) that needs 13.8 VDC in an external supply. This one is one-owner/nonsmoker, in excellent physical condition, and works perfectly in all respects. AES sells them for $165. They bring $150+ on ebay. I will sell this one for $110 + shipping firm, no trades, and will be able to ship about 10/1. Tks es
73! Jan N0JR

I am going to the Delaware Hamfest on Sept 12 and will be reluctantly dragging some boatanchor parts with me that may be of interest to some of you reading this. I hate to get rid of some of this stuff but I have to get the basement cleaned out. I have not had a chance to price some of the stuff yet but the prices will be fair. I really dont have time to pack and ship this stuff so if you want it come and get it! I will also be going to the DVRA hamfest in Jersey, The PackRatts and Sellersville fests in PA in the next few weeks.
Thanks for reading, Jim W3ATV

3395. Lafeyette HA-420 Walkie Talkie ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-12 00:00:00 UTC
From: Dave Clark <gt6927c@prism.gatech.edu>
Message-ID: <7rhejn$h5i@catapult.gatech.edu>
Source record: 79142

I picked up a set of vintage walkie talkies at a yard sale a while back and just got around to fooling with them. I think the model was a lafeyette HA-420 but it could be something like HM or HS. (Unfortunately they aren't with me at the moment.) They have a metal case which has vents on the back, about 5 foot long antennas, take 8 AA batteries each. Needless to say, they are rather hefty looking. They seem to work OK.

Anyhow, I was just wondering if anyone knows anything about these things. What year are they? What was the original retail price? Where about were they in the heirarchy of the walkie talkie world of the time (ie were they top of the line, middle of the road, or crap) An owner's manual or schematic would be excellent, but unlikely I suppose.

I have a TRIO Kenwood 9R59D communications receiver for sale or trade. This is a tube general coverage receiver from the late sixties, with BFO and bandspread controls for the ham bands. In Fair+ condition; the case and face are nice and clean, it is in operating condition, but is missing two small knobs. US $100, or trade for Yaesu 101/107/901 stuff or?

Tim VE7SEZ

For Sale:

Gonset Communicator 6m AM Transceiver in excellent condition. Tunable receiver 49-54 MHz. Crystal controlled transmitter with all original knobs, with 115V AC power supply
built-in. Tuning eye tube included for final plate and load adjustment. Clipper off-on,
panel lamp off-on switches. Crystal-Carbon mike switch, headphone jack, antenna jack and
many more features. Built-in front-facing speaker. Superior condition. Silver gray color.
A classic. Will sell for $75.00

= = = = =

Hallicrafters SX-140 Receiver in excellent condition. Covers all ham bands 80, 40, 20, 15, 10 and 6m. Receives SSB, AM and CW. S-meter, Calibrator, ANL, stand-by switch and many other
features. This receiver is the matching set for the HT-40 transmitter. They make a great
pair on AM and CW! Receiver works very well, all functions working right. I have seen very few SX-140s that look any better than this beauty. Will sell for $90.00

= = = = =

RCA RECEIVING TUBE MANUAL RC-24, in excellent condition $12.00

= = = = =

RCA Pocket Reference Guide book 1954 with Tube Data, Info on Batteries,
Test Equipment, Parts etc. Brown cover 3" X 5.5" in very good condition
Will sell for $7.50

= = = = =

Meck 60 Watt Antique AM and CW Transmitter. Model T60-1 with manual. Uses 6L6 oscillator
and two parallel 6L6 finals. Modulator is Class AB1 using push-pull 6L6 pair. It has
combined Plate and screen modulation. Uses 6SN7 speech amplifiers and another 6SN7
phase-inverter-driver. Metal cabinet 15" X 11" X 9". Two complete built-in 115V AC power

supplies. Built-in antenna changeover relay with extra send-receive contacts brought out
to panel on rear. Has terminals for receiver antenna also. Grid and Plate current metering
on front panel. Complete with all tubes and in good condition. Uses plug-in coils, one set
supplied. Will sell for $150.00

= = = = =

Heath HW-2036 2m FM Transceiver with original touch-tone (DTMF) microphone for making auto-patches. Radio is in excellent condition. This is a thumbwheel switch tuning synthesized rig that covers the entire 2m band 144-148 MHz in 5 kHz steps. Has built in analogue S-meter, volume, squelch, Tone OFF-A-B-C and offset/aux controls. Will sell for $75.00

= = = = =

Knight-Kit TR-108 2-meter AM transceiver, matching V-107 VFO are in excellent condition.
It uses a 2E26 as the final amplifier and a 6L6GC for 15 watts of plate-modulated AM phone.
It runs on 110 V AC or 12-14 V DC with the built-in power supplies. The V-107 VFO can be
used with either the TR-106 or the TR-108 transceiver. Needs Power Cable (easily made.)
Will include a spare final tube - sell for $95.00 plus shipping

= = = = =

EICO 752 DC Power Supply in excellent condition. Allows the EICO 753 and other
HF tube gear to run on 12-14V DC supply in automobile.
Will sell for $45.00

= = = = =

Drake TV-1000-LP Low Pass Filter. Handles 1 KW up to 30 MHz, and can be used up to 52 MHz at reduced ratings. Case is copper just like the 'B' line radios. Excellent condition.
Will sell for $25.00

= = = = =

MFJ 407 CW deluxe keyer in excellent condition $30.00

= = = = =

Knight Kit P-2 SWR meter in very good condition with manual.
Comes complete with remote sensing head, cable etc., and in proper working condition.
Will sell for $35.00 plus shipping

= = = = =

Kenwood R-600 General Coverage Receiver 0-30 MHz continuous coverage.
Mint condition. Has AM, AM Narrow, CW, USB and LSB modes. Covers all
bands.
Digital display, front-facing loudspeaker built-in.
Headphone jack, recorder output jack, noise blanker, RF attenuator
etc.
Three antenna terminals and mute switching for use with transmitter or
transceiver.
Built-in Speaker and AC PS for 110-120V or 220-240V AC $200.00
(SOLD)

= = = = =

Heath AM-2 SWR and Reflected Power Meter. Very good condition. Front
panel is very very
good. Case needs cleaning. SWR meter has all functions working fine.
This SWR meter looks
perfect with a DX-20, DX-35, DX-40 or DX-100 etc. Will sell for
$30.00

= = = = =

General Electric model 7-2705A Pocket AM Transistor Radio in very good
condition $25.00

= = = = =

General Electric model 7-2705B Pocket AM Transistor Radio in near mint
condition $35.00

= = = = =

Panasonic 8-track tape player, with cables. Model RS-802-US in
Excellent condition.
No visible head wear. This deck looks almost like brand new. Plays
like new.
No scratches. Beautiful. Will sell for $49.00

= = = = =

J.C. Penney 23-Channel CB Radio Model 981-7511. Runs 4 Watts on
Channels 1-23
with original microphone. Excellent condition $20.00

FT101ZD, I just purchased one at a hamfest and it looks mint, one of the cleanest I've seen....but has no recieve....before I tear into this thing I have a question....
Looking inside I notice it doesn't have either the AM or the FM board installed and the manual says it come with one or the other installed. this is from an estate sale and I wonder if someone has robbed it. My question is, is this the reason the rig doesn't recieve? does one of these boards have to be installed?

By no receive I mean there is no speaker noise or anything...

I'm in the electronics repair business but being unfamiler with Yeasu's I thought the smart thing to do would be to ask a few questions first....

I have for sale a Tektronix 547 Oscilloscope. Dual time base, 50 Mhz, delayed sweep (smooth as silk and real
stable high speed transitions in delayed sweep mode)transitional, mostly solid state, still has a few of the old glow bottles.

It comes with a 1A4, 4 chanel, solid state, plug in(beatifull workmanship!!) Type CA plug in (all tooobs) and a Type L plug in, also all toobs. Also included are the original tek manual for the scope, original manual for the 1A4(as big as the scope manual) and a manual copy for the Type CA plug in. (Sorry, no manual for the type L.

And, it all works!!!

It's got to go. Taking up WAY to much space. Have aquired TOOO Many Boatanchors over the years and can, now, barely squeze between the work bench and the car in the garage. (the car is not particularely large)

I'm asking $100.00 for the works. Pick up only in Simi Valley, Southern California 93065

I have a Hallicrafters S18 that I am selling. This is a 9 tube, 5 band superhet covering .54-38 mhz. 465 khx IF,with bandspread, BFO and an image rejection circuit on the 4th and 5th bands. This unit has no 'S' meter and utilizes an external speaker. Manfuactured in 1938. The unit is functional, has been checked and worked on by my electronice tech expert in order to bring it up to par.
It has some paint missing around some of the dials, has all of its original knobs, except for one. For a better description, contact me directly at:
nc183d@aol.com
Asking $90.00 plus shipping from 07860 zip code.
rgds,
Mark S.

Source record: 79092
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.swap

For Sale -

Hallicrafters SX-130 - complete but not too pretty. This radio must have been in the garage a few too many years as the slide rule dial lettering is coming loose from the glass and the chassis is a bit rusty.. It would make a good parts radio as it is complete with all of the original knobs, good power transformer, i.f. cans, etc. Actually if a guy could re-do the dial somehow, it would be a good restoration candidate, I suppose.

$50.00 shipped

This TR4C Station is in very good looking and good working condition.
All original and on the air. 8.5 out of 10. Comes with a good copy of
the manual and a handmic. The receiver is very sensitive on all the
bands and the transmitter sounds good using three 6JB6s in the output.
Just plug in the mic and you are on the air with full output 80 through
10. $295.
I have JPGs available if interested. 73 Chris VE3NGW/W4 Florida

From: Art Winterbauer <artwinte@sprynet.com>
Message-ID: <37DCE8AA.7AF6D839@sprynet.com>
Source record: 79164

Does anyone know the total current draw for a Hallicrafters S38-C? I'm thinking of putting in line isolation, probably two filament transformers back-to-back. Just have to find/buy those of the right size! If no one knows, I'll just measure it after I've re-capped the rig.

Thanks!

Art WA5OES

Art:

The tube heater string draws 150 ma, and the B+ load is 60-70 ma at
most. That would but the total current draw at about 220 ma.

Hallicrafters says the S-38C draws 30 watts and that computes to 250 ma.
A couple of 12.6 volt, 3 amp transformers should work fine.

I have a mint Atlas 215X s.n. TP 10084 for sale. It is in mint condition aesthetically and electrically with full power output. This is a 160m thru 15m rig. Excellent 5.645 kHz I.F. single conversion receiver and great ultimate rejection. The rig is primarily designed for use on SSB, but can be used on CW. However, since it does not have built-in VOX, the CW operation is a bit difficult.

Price: $295.00 with original owner's manual, shipped/insurance (48 contiguous states).

Cross-posted to: rec.radio.amateur.boatanchors,,rec.radio.swap

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tune.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $2,750.00 unpacked.

I have a few tested and Guaranteed 4CX3000A tubes at $750.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

The CCA Communications HFT-1000E4 2-24 MHz 1KW CW
4 channel transmitter was made in the 1970's for commercial use.

Any of the 4 pretuned channels are selected by a switch on the from
panel. Uses 6146 as driver
and two 4-400A Tubes as PA Input power: 220V/1Ph/50-60Hz, Size 22"W X
18"D X 67" H,
Net weight: 515 Lbs.
Appears to be in very good condition with manual.

Only $500.00 unpacked FOB Somis, CA (near Los Angeles. Contact me for
further details.

Hi Fellas;
I have for SALE:
(1) Hallicrafters SP-44 Panoramic Panadapter, complete but needs restoration, they are kinda rare.
Cabinet has been ventilated, top and sides(holes in a line) but not shabby, rust spots here and there, will need painting.
Front panel is complete but same condition. Scope tube hood and scope tube cover inside will need de-rusting and painting. The rest of the inside is Complete and NOT RUSTED(Amazing!), but needs major cleaning.
It will need bringing up on a variac but caps should be checked first. Has not been powered up in ages!
I can supply a copy of the schematic.
Price is $50+ ups from LI, NY.
Any Brave souls out there, Hi!
Thanks es 73....Rich WA2RQY (1961)

3495. Help: 30V From Chassis to Neutral

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-14 00:00:00 UTC
From: Al <ABurzynski@swri.edu>
Message-ID: <rtsih9461iv48@corp.supernews.com>
Source record: 79114

I have an old bc-342 receiver. Input voltage is on the old 2-prong ac plug (United States 120v wiring). I connected a standard 3-prong plug and let the neutral (round third pin) wire float. The receiver works fine, however, I checked for voltage from the receiver chassis to the floating neutral wire and I get about 30 VAC. Is it safe to connect the third wire from my ac plug directly to the chassis? Will this not short that 30vac to ground? What are the consequences? Is there a better (safer) way to remove the 30v from the chassis?

The schematic shows that the incoming 2-wire ac is fed directly to the primary of a transformer (through a switch and fuse), no ground connection. The secondary has a full-wave rectifier with the center tap grounded to the chassis. It produces about 250vdc. Other windings exist for filaments, etc.

All input is appreciated. Thanks.

Al

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday September 19th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

While the schematic may show the line hooked directly to the transformer and nothing else, you might find there is a "line bypass" capacitor in there somewhere. Without such a capacitor, and without grounding the chassis, received signals may be modulated by hum. The other possibility is that you are using a VTVM or sensitive meter to measure the 30V, and what you are seeing is just capacitive "leakage" in the power transformer. A small amount of leakage is normal. Put a 4.7K resistor from the chassis to ground and measure the voltage across it. If it's less than a volt, you can ground the chassis with no problems. If it's over, you might want to investigate a little further.

Doug Moore

3505. Help with 8950 to EL509/6KG6 "upgrade"

I've got a couple of Hammarlund rcvrs, an HQ-129X and an HQ-180, and they both have enough ac on the case when ungrounded that if you connect yourself up as the ground path, you get a little tingle.

I first noticed this on the '180 when I was holding the antenna coax (w/grounded shield) in one hand while I leaned on the case a bit to attach the antenna 'round back. Jumped a bit.

I measured the voltage with a DVM on the 129X, and it read ~70 volts.

I looked at the schematic, and there were caps from both sides of the power line to ground.

I think the 180 has a similar arrangement, but I've never looked. I've been told that I should rip those right out, and install three-wire grounded cords on both radios, but I haven't done that yet.

I generally ground both of them and have never bothered to measure how much current is flowing.
Nothing bad has ever happened. :-) You get sparks if you make or break the ground while they're plugged in.

3537. [FA] - WWII Navy Beam Filter NOS in Box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-15 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <37DFB55F.4CD7@ix.netcom.com>
Source record: 79058
Cross-posted to: rec.radio.swap,,rec.radio.amateur.boatanchors

This beam filter was a common item in the 1940's, 50's, and 60's that
radio amateurs used as a narrow-bandpass, or band-reject audio filter
for copying CW or rejecting a nearby signal. This unit appears in
new-old-stock (NOS) condition and the serial number on the filter
unit matches the serial number on the box. There is a US Navy,
Orange-colored acceptance stamp on the top of the case.

The filter is labeled as "N.A.F.68304". The matching box indicates
it was made by United Transformer Co., New York City, NY.

The box also has a stock number of "(R)16-F-2150".

National did make some exciters in the late 30s which were housed in HRO cabinets but this transmitter does not bear any resemblence to those transmitters. The tranmitter pictured does not use National knobs. Maybe there is another National company.

I have two HW-101s with manual, power supply and cable. One has the CW filter installed. The physical appearance is excellent on both. Both work well on CW but I have no microphone to try them on SSB.

The one with the CW filter can go for $125.00 and the other one for $100.00 plus shipping. Shipping needs to be done in two boxes each.

3565. 51J-4 advice needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-16 00:00:00 UTC
From: Bob <xyz_p15218@flash.net>
Message-ID: <37E17B1B.AD6D7FCA@flash.net>
Source record: 78999

always wanted one and I just acquired a 51J-4 ! The radio appears to be
complete, serial number 42xx, works pretty well (after simple fix) but
is
"grimy" and probably needs an alignment, and some TLC. The radio has
military tubes circa 1964 so I'm guessing that was the last time it was
serviced. I have checked them all (on a Hickock mutual conductance
tester)
and they are fine. The only problem that kept the radio from working was
the filament return connection at the power transformer mounting bolt
was
loose. My questions to the Collins experts are:
1) The grime on the chassis is easily removable with denatured alcohol.
My
only concern is alcohol probably would soften up whatever the coils
under
the chassis are sealed with. I tried cleaning the chassis with Simple
Green
but it would not bother the grime. Any ideas? Or I could just leave the
grime as is.
2) The side panels of the radio look like something that was anodized
but
has tarnished. Steel wool it?
3) How difficult is it to remove the front panel or should I just clean
it
as best I can on the rado? It's not beat up, just nasty.
4) The grease on the tuning and bandswitching apparatus appears to be
dried
up. I'm thinking, carefully remove as much as possible (with degreaser?)
and lube with good wheel bearing grease. ??
5) I don't yet have a book on the radio...I'll probably order from
W7FG...but the 1 kc mechanical filter position reduces the sensitivity
by
60dB or so. Do the filters fail? The mechanical filter section has
printed
on it's side "Mechanical filter conversion kit" and is equipped with 3
filters.
6) The tuning drum (or whatever it's called) is very yellow and has
areas
where the paper has been scrapped off. Are replacement coverings for the
drum available and where?
7) Things that appear to be missing from the radio are a hold down clamp
for the 5V4 and whatever goes into the spring clips on the inside of the
right side panel.
7) Are there any good books out there on these radios?

Thanks for reading, please post reply to the boatanchor newsgroup so
everyone can learn.

The Old Radio Museum will be at the Marshfield Mass. Hamfest Saturday.

To all,

The Old Radio Museum, recently seen in QST magazine, Antique Radio
Classified and the AWA OTB, will be at the GENESIS AMATEUR RADIO SOCIETY
Hamfest in Marshfield Mass. this Saturday, September 18th.

Marshfield is located between Boston and Plymouth Mass., just off of
Rt 3. The meet is at the Marshfield Fair Grounds. It looks like the
weather and the meet will be great! Hope to see you all there.

Hamfest information:
http://www.capecod.net/~tebolus/flea/flea.html

Museum information:

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

3576. Globe Scout 680A xmtr as-is $25.00

I am looking for preWW-II QSL cards from Iowa stations when my native state was in call district 9.

I have limited trading stock of 2, 3, 6, 7 and 8 including a 2AEF with excellent signature. Or I will gladly purchase the Iowa card(s).

What do you have?

Click on this link to view:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=165539516

Condition: Very good, original paint, no rust or corrosion

Extras: Spare modulator deck, wheeled roller base, service manual, 3 wire line cord, blower fan switch mod, and rear outlet cover power plate

Produced in large numbers during the 50's and 60's, the T-368 transmitter was used by the military as a multi-purpose unit. Affectionately known as the "T-3" a great many were placed in stationary RTTY service, while others were used for AM and CW operation. As a medium power transmitter the T-368 was overbuilt for continuous 7/24 service.

The unit weighs about 700 lbs., and is roughly cube shaped. Height and length are close to 41". It's modular construction allows easy access for service. The lower deck, and the most heavy, is the power supply section. The middle deck, and next lightest, is the modulator, and the top deck is the RF section. All decks are equipped with Cannon connectors and can easily be removed for service and troubleshooting. It fact it is possible to "hot swap" defective decks while the power is still energized with no adverse effects.

The T-368 requires very little in the way of conversion for use on the amateur bands. With its 450 watts of carrier, and heavy duty construction, the T-3 makes an outstanding amateur transmitter. A few simple safety and convenience changes are all that is required. See the Conversion button for more information.

For more info and photos of this unit, use this link
http://www.buffnet.net/~bhowes/t3sale.htm .

Due to the weight and size requirements, this unit must be picked up in Buffalo, NY. Or you can arrange pickup, crating and shipping at your expense.

Payment must be made within 1 week in certified funds.

Any questions, just email.

Tnx!

3579. Adding a magic eye to a Hallicrafters S-20R

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-16 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <tO7E3.734$g36.43685@sea-read.news.verio.net>
Source record: 79084
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Thanks to advice from rec.antiques.radio+phono (esp Neil Sutcliffe), I succeeded in hooking up an external magic eye tuning indicator to my Hallicrafters S-20R. This web page tells the tale:

http://antiqueradio.org/magiceye.htm

This is probably old hat to some folks, but I found it an interesting project.

A second page contains some restoration notes on the S-20R itself:

http://antiqueradio.org/halli10.htm

Cheers.

3580. Need help on Collins 51J-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-16 00:00:00 UTC
From: Bob <XYZ_p15218@flash.net>
Message-ID: <01bf0067$280968c0$LocalHost@default>
Source record: 79085

I always wanted one and I just acquired a 51J-4 ! The radio appears to be complete, serial number 42xx, works pretty well (after simple fix) but is "grimy" and probably needs an alignment, and some TLC. The radio has military tubes circa 1964 so I'm guessing that was the last time it was serviced. I have checked them all (on a Hickock mutual conductance tester) and they are fine. The only problem that kept the radio from working was the filament return connection at the power transformer mounting bolt was loose. My questions to the Collins experts are:
1) The grime on the chassis is easily removable with denatured alcohol. My only concern is alcohol probably would soften up whatever the coils under the chassis are sealed with. I tried cleaning the chassis with Simple Green but it would not bother the grime. Any ideas? Or I could just leave the grime as is.
2) The side panels of the radio look like something that was anodized but has tarnished. Steel wool it?
3) How difficult is it to remove the front panel or should I just clean it as best I can on the rado? It's not beat up, just nasty.
4) The grease on the tuning and bandswitching apparatus appears to be dried up. I'm thinking, carefully remove as much as possible (with degreaser?) and lube with good wheel bearing grease. ??
5) I don't yet have a book on the radio...I'll probably order from W7FG...but the 1 kc mechanical filter position reduces the sensitivity by 60dB or so. Do the filters fail? The mechanical filter section has printed on it's side "Mechanical filter conversion kit" and is equipped with 3 filters.
6) The tuning drum (or whatever it's called) is very yellow and has areas where the paper has been scrapped off. Are replacement coverings for the drum available and where?
7) Things that appear to be missing from the radio are a hold down clamp for the 5V4 and whatever goes into the spring clips on the inside of the right side panel.
7) Are there any good books out there on these radios?

Thanks for reading, please post reply to the boatanchor newsgroup so everyone can learn.

From: Ron Wicker <ronwick@flash.net>
Message-ID: <NAaE3.552$P44.217@news.flash.net>
Source record: 79091

I have the following 2 meter rigs for sale. All power up and have output. Some don't receive, some do, Display not working, etc. If you can fix them you have a bargin. The rigs are as follows
1) KDK 2015
2) Kenwood 7730
3) Icom IC 230
4) Icom IC 245
All are FM only, no schematics, no mikes.

$60.00 plus shipping for the lot. Individual rigs are $20.00 each plus shipping.

Clean off the grime by using GoJo Hand Cleaner. Get the plain GoJo
without the pumice and orange flavor, etc. It will cut the grime and
not hurt anything.

> 2) The side panels of the radio look like something that was anodized
but
> has tarnished. Steel wool it?

No, don't use steel wool. Try the GoJo to remove the dirt and grime.
The panels look to be coated with varnish. Don't try to remove the
coating.

> 3) How difficult is it to remove the front panel or should I just
clean it
> as best I can on the rado? It's not beat up, just nasty.

Again, try the GoJo treatment on the front panel too. Use an old
toothbrush and the GoJo.

> 4) The grease on the tuning and bandswitching apparatus appears to be
dried
> up. I'm thinking, carefully remove as much as possible (with
degreaser?)
> and lube with good wheel bearing grease. ??

I lubbed the cams, gears, etc. in my 51J3 with wheel bearing grease,
seems to be doing OK after 6-7 years.

> 5) I don't yet have a book on the radio...I'll probably order from

Yes, they can go bad, but try an alignment first before looking for a
replacement.

> 6) The tuning drum (or whatever it's called) is very yellow and has
areas
> where the paper has been scrapped off. Are replacement coverings for
the

Contact Ron Hankins at <www.rdtnet.net/kk4pk>, he has nice repos.

Those clips held the bristo (or bristol if you perfer) wrenches needed
to remove the knobs.

3589. Vintage Heath SWR bridge and other items FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-17 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <pugE3.728$Wc.13694@monger.newsread.com>
Source record: 79008

I have some Heath items for sale:

Heath AM-2 SWR bridge. This is the one that matches
the DX-40, etc., and is the grayish silver color. Very
good paint and crinkle finish. A scratch on left side.
A "condensed manual" is included, at least that is what
Heath has stamped on it. $ 25

Heath low voltage power supply. It is the Heath IP-27. It is a
low voltage power supply, fully adjustable from about 0.5 Volts
to 50 Volts. It also has current limiting that is built in and
adjustable from a couple ma up to 1.5 amps. There is also
a nice large meter for measuring current or voltage. The
supply is "floating", so can be used for either plus or minus
supplies. It is the "Heath Brown" color. Manual included. $100

I also have the following Heath manuals available. All are in good
condition.

GR-2000 TV Set $ 10
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 5

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Variable Capacitors (see also ARC-5 Parts)

HAMMARLUND "TC-450-BW" - Large air variable transmitting capacitor, 45-300 pf, .07" plate spacing. Frame is 4-1/2" wide, 3-1/2" high, 7" deep. 1/4" shaft, 1-1/2" long. Ceramic insulation, 24 rotor plates, 23 stator plates. Good condition. Price: $10 (3 lbs.)

TCS Receiver capacitor/dial assembly - 3 section capacitor with 4" dial and reduction drive (25 turns to cover range). 7" wide, 3-1/2" high, 3-1/2" deep. 1/4" shaft. Ceramic insulation, 2 sections 10-280 pf, 1 section 10-360 pf. Good condition. Price: $3 (4 lbs.)

JOHNSON 100R36 - Air variable capacitor, 10-100 pf, .07" plate spacing. 1-3/4" wide, 1-3/4" high, 4-1/2" deep. 1/4" shaft 1/2" long (front), 1/4" long (rear). Can be ganged. Ceramic insulation. NOS in original box, mint condition. Price: $8 each (2 lbs. each) (have 2)

Connectors, Adapters and Tube Sockets (just a sampling) Shpg. wts. 1 lb.

9 pin "octal type" connectors - look like octal but they're not! Used on some E.F.Johnson gear. Fit Amphenol "RS" mounting rings and cable bells.
One matched pair male/female (pins 6 and 8 missing) $1, one socket (female) with all 9 pins, $1. Includes your choice of chassis mounting plate and spring or cable bell (specify) Used, good condition.

AMPHENOL 83-22SP connectors - look just like UHF, but have TWO pins, plus outer shield. Used with RG-22/U dual coax. Have 2 chassis mount female and 1 cable mount male. Unused NOS condition. Price: $1 each or $2 for all 3

AMPHENOL "Series 75" Microphone Connectors - Used on vintage gear such as Viking 2. 1 conductor and outer shield.

Type Description Quantity Price Quantity Price
PC1M Male, chassis mount 4 (New) $0.50 6 (Used) $0.25
MC1F Female, cable mount 6 (New) $0.50 4 (Used) $0.25

BNC Connectors - All are used, price $0.50 each

Type Description Qty.
UG-88-U Male, cable mount 5
UG-260-U Male, cable mount 3
UG-1094-U Female, chassis mount 15
UG-290-U Female, chassis mount 9

Amphenol "Series 75" Microphone to 1/4" Adapter - Adapts female MC1F plug to female 1/4" phone jack. (adapter is male PC1M and male 1/4" phone). For adapting mikes with MC1F to rigs with phone jack mike input. Price: $0.50 each

UHF to RCA Phono Adapter - Adapts male UHF plug (PL-259) to female RCA phono jack. (adapter is female UHF and male RCA). Perfect for Heath rigs like HW-101 which have RCA phono antenna connector. Silver plated, good condition. Specify long (1/2") or short (1/4") center pin. Price: $0.50 each (4 long, 7 short)

Power Transformers (all have 117 V 50-60 Hz primary)

RCA 56247 - 970 VCT @ 130 ma., 5 V @ 3 A, 6.3 V @ 1 A, 6.3 V @ 1.8 A, 6.3 V @ 5 A, 5 V @ 2 A, 117 V @ 15 ma. (7 secondaries) Upright mounting. NOS in original box. Price $15 (13 lbs.)

Filter Chokes

Thordarson 74C29 - 15 Hy @ 150 ma., 300 ohms. Fully encased upright mounting. NOS in original box, mint condition. Price $15 (10 lbs.)

Rack Panels - Steel

Special Panel - 19 X 8-3/4" Black Wrinkle $2 8 lbs
Has 15x4 hinged door in top 2/3 of panel. Fair to good condition a few small holes, some rust.

Meter mounting panel, 19 X 5-1/4" Black Wrinkle $3 4 Lbs.
Has 15x4 opening with recessed masonite panel with holes for four 3-1/2" meters and provisions for glass so that meters are in a window and protected from contact. Masonite panel easily replaced, glass not included, VGC.

Chassis Bases - Unused

Size
(LxWxD) Finish Bud equ. Price Wt. Description

20x12x2 Gray Enamel None $8 12 lbs VGC
17x11x2 Zinc CB-770 $12 10 VGC
12x8x3 Zinc CB-760 $10 9 GC
5.5x4x2 Black Wrinkle ? $2 1 VGC

Utility Boxes - Used & unused

Size
(LxWxD) Finish Bud equ. Price Wt. Description

9x6x5 Black Wrinkle CU-1099B $2 2 lbs VGC but no end covers.
5x4x3 Gray Enamel CU-728HG $3 1 VGC
5x4x3 Gray Enamel CU-728HG $2 1 VGC, 2 small holes in end covers.

Cabinets - Used & unused

Cabinet, equal to Bud C-973. 7x8x8 (HxWxD) with hinged top & removable front panel. Black wrinkle, mint, unused. Price:$20 (5 lbs.)

Cabinet - Equivalent to Bud CD-1483G. 8" high, 16.5" wide, 8.25" deep, with hinged top and removable 8"x14" front panel. Gray wrinkle, in fair condition. Paint OK but has some rust spots. No holes in cabinet, panel has one large and several small holes. Perfect for a receiver or small transmitter if front panel is replaced and cabinet repainted. Price:$3 (7 lbs.)

Miscellaneous

Ventilated Top Cover - Grillework cover for small amplifier, power supply, etc. 9" long, 4.75" wide, 3.25" high. Black wrinkle. Excellent condition. Price:$2 (1 lb.)

More to come!

It's been awhile since I worked on an NC-300, but as I remember it uses a 6BE6 as the BFO/Product Detector. That circuit is used only for SSB/CW reception. Check the 6BE6 product detector and associated components. There is another 6BE6 in the receiver, it is the second mixer. Try switching those 6BE6 tubes and see if anything changes. If not, the tubes are probably good. I remember replacing several "out of spec" resistors in the NC-300 I repaired. Check all the resistors in and around the BFO/Product Detctor circuit.

Hope this helps.

I have a few "COLLINS" goodies 4 Sale...
They will also be at the TRW swapmeet in the city of Manhattan Beach, California.
Cross streets Aviation Blvd, and Marine Blvd. Date 9/25/99 Saturday 7:00 - 11:00 A.M. The location of the swapmeet is 4 miles south of LAX, and 2 miles west of the (405) San Diego Freeway...Well here is the list.....

Collins 75S-3 RX winged
Collins 32S-3 TX winged
Collins 516F-2 with speaker...$1200.00

Collins KWM-2A (round emblem) S/N 36210 &
Collins 516F-2 (round emblem) S/N 60052....$2200.00
Very very clean, and all original

Collins KWM-2A (winged emblem) S/N 17829 &
Collins 516F-2 (winged emblem) S/N 15610.....$1200.00

Collins KWM-2A was converted from a KWM-2 winged &
Collins PM-2 power supply.....$900.00

Collins 312B-5 winged $800.00
Collins 312B-4 winged $275.00
Collins 312B-4 winged $275.00
Collins 312B-3 winged $275.00
Collins MP-1 $99.00

Collins 30L-1 winged $550.00
Collins 30L-1 winged $550.00

Collins 75S-3C winged converted from a 75S-3B $1100.00
Collins 75S-3B winged $800.00

Collins 32S-3 winged &
Collins 516F-2 winged..... $800.00
Collins 32S-1 winged &
Collins 516F-2 winged $550.00

Rotor control in a Collins 312B-3 speaker case. IT LOOKS VERY GOOD $175.00

Watkins Johnson WJ-8718-23 Receiver $399.00
I have a Watkins Johnson WJ-8718-23 receiver in cosmetically good to very good condition serial number 1 (ONE). Comes with a copy of the instruction manual. It lights up but needs some service, a friend of mine said the situation is

on the digital board, a little burn mark also some resistors may need
to be replaced on another board connecting to the digital board. He
said its defintely fixable. The case, and front panel look good, a few
push buttons may need replacement. The price is $399.00 plus shipping,
because it need service.
I have a very very heavy duty shipping box for it now.

Rotors...
Ham II $78.00
Brand New Hygain Ham IV (never used) $200.00
Swan 350, with 117XAC powersuppl/speaker works great $130.00
Daiwa CN-720 wattmeter/ SWR 1.8 to 150 MHZ $80.00
Palomar noise bridge $30.00
Palomar PT-340 Tuner-Tuner $40.00

I should have 6 SIX Kenwood R-5000 receivers by the swap meet
excellent condition
$275.00 each.
ONE parts Kenwood R-5000 $80.00 some boards are missing. The case and
the front panel are excellent....
I have 4 Sale some Very Nice 19 " Custom Rack Mounts. Color is dark
grey,
and they are in excellent condition. The front panel of the rack
mount
has
the opening for the radio, plus an external speaker mounted in the
front
panel. It also has 2 handles. The measurement of the opening is about
10 1/2
inches in width, and 3 5/8 inches in height. The radio Does Not need
to be
out of the case for installation.

They were made for the Kenwood R-5000 receiver. The height, and
width
of this
Receiver is almost identical to the TS-440S, TS-430S, TS-670S so you
can use
it for those models. Other Kenwood Models that have similar height,
and
width are TS140S, TS-680S, TS-450S, TS-690S, and TS-570D/S. Please
remember
all the models I stated above all use the same mobile mounting
bracket, its
the Kenwood MB-430. So all the radios widths are the same $40.00
each

Kenwood VS-1 voice synthesizer will fit these models: $59.00 each
(TS-940S, TS-440S, R-5000, TS-711A,TS-811A, TR-751A,
TR-851A,TS-670S,TM-3530A,TM-2530A,TM-2550A,TM-2570A, and TW-4000A.

Kenwood TU-6 fits these units: (2 UNITS NEW IN THE BOX)
TH-21A,TH-31A,TH-41A, and TR-50 $39.00 each

Kenwood TU-4C fits these model this model TW-4000A $35.00 each

Kenwood YK-88C filter fits these units: $55.00 each
TS-120S,TS-130S,TS-130SE,
TS-430S,TS-440S,TS-530S,TS-530SP,TS-670S,TS-180S,TS-830S,TS-660,
and R-5000.

Kenwood YK-88CN filters fits these units: $55.00 each
TS-130S,TS-130SE,TS-430S,TS-440S,TS-530S,TS-530SP,TS-830S,TS-670S,TS-660,
AND R-5000.

Kenwood YK-88SN filters fits these models:
TS-130S,TS-130SE,TS-430S,TS-440S,TS-530S,TS-530SP, and R-5000. $55.00
each

Kenwood IC-10, chips for the TS-440S, and the R-5000 $50.00 each

Kenwood IF-232C interface unit $55.00 each

Johnsn Viking low pass filter $20.00 each
miltary brand new headsets $15.00 each

Lots, and Lots of misc stuff.....

I�m looking for information regarding a Racal TRA-950 tranceiver I bought. I yet have to pick it up and all I know about it is that it is crystal controlled, in the HF band and has a 24 Volt power supply. It is transistorized about 15 Cm high more ore less 19�� wide and table top. Does it ring a bell to someone?

3600. HAM collectable?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-17 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <7rt65idfa1@mailint03.im.hou.compaq.com>
Source record: 79019

In a box of undefined goods that recently came my way I found a RAYMART Bandchecker.

It consists of a cylinder about 1�? thick and 7�? long with in one end a coil and on the other end there is a round frontplate where you can adjust a variable C. The frontplate has 3 ranges; 3-7.5, 7-18 and 17-35 Mc/s. The scale is marked where the HAM bands are. In the cylinder there is a range switch and as indicator there is a small bulb.
A metal strip is bend in the shape of a handle.

Before throwing it away, is this something that has any value or is worth collecting?

Looking for the antenna current meter for a BC-223 . It has a white face
The only markings I can read on the one that came out of it are,
Signal Corps Type IS-128. The meter was made by Weston and is 2".

The other one I am looking for is a Simpson model 126.

Thank you. Gary

Phil,

That S-20R is positively _gorgeous_. My first shortwave receiver was an S-20R -- I think I paid $20.00 for it in about 1963 or 1964.At one point, I added the external backward-reading S-meter which, I believe, is described in the receiver manual. In about 1966, or so, I acquired an S-40B -- that green dial was _so_ pretty, but I'm not certain that it was a better receiver than the -20R. My final "boatanchor" receiver was a Hammarlund HQ-129x, which I used with a Viking II and Eldico SSB-100m as my amateur radio station for a number of years.

Try Westley's White Wall Tire Cleaner. Rinse with plenty of water when
you're done..

> 2) The side panels of the radio look like something that was anodized
> but
> has tarnished. Steel wool it?

If you do, you'll p[robably end up removing the thin zinc (?) plating. But
I don't know of any other way to do it. You probably should paint it after
you have it cleaned up.

> 3) How difficult is it to remove the front panel or should I just clean
> it
> as best I can on the rado? It's not beat up, just nasty.

Shouldn't be too bad to remove. It's usually well worth the effort because
then you can get at the thing with a toothbrush and get all the ham scum out
around the knobs, etc.

> 4) The grease on the tuning and bandswitching apparatus appears to be
> dried
> up. I'm thinking, carefully remove as much as possible (with degreaser?)
> and lube with good wheel bearing grease. ??

DONT use wheel bearing grease. I use a Teflon based grease bought at Radio SHack. WOrks great and seems to last a long time without drying out or coagulating. Clean the switches out with DeOxit or tuner cleaner to get the grease out.

> 5) I don't yet have a book on the radio...I'll probably order from

> on it's side "Mechanical filter conversion kit" and is equipped with 3
> filters.

Yep, filters fail - but so do switches. It sounds to me like you actually have a 51J-3 or R-388 with the mech. filter conversion kit to "convert" it to an R-388. My 51J-4 wasn't labled "conversion kit". Could be shorted inside, or someone dropped the filter. Or someone put a 455 KC filter in there!

> 6) The tuning drum (or whatever it's called) is very yellow and has

Yes they are available - see the back want ads in Electric Radio magazine.

> 7) Things that appear to be missing from the radio are a hold down clamp

> right side panel.

I think the spring clips held a Bristo wrench to take off the knobs, etc.

> 7) Are there any good books out there on these radios?

Not aware of anything other than the factory manual

Good luck with it! 73 - John

I just cleaned my basement and revealed this old BA. The outside of the case is banged up, but inside things are perfect. This is perhaps, the most selective "low freq" receiver ever made. Does anyone do DX on normal broadcast frequencies anymore? It is surplus to my needs, but have no clue as to its value or appeal. Regards,.....Larry in Seattle

3620. Re: MYSTERY CONNECTORS

Newsgroup: rec.radio.amateur.boatanchors

From: Dave Shrader <dshrader@earthlink.net>
Message-ID: <37E2DBC0.58D67084@earthlink.net>
Source record: 79039

The connectors appear to be from the Mil C 38999 or Mil C 3106 series.
Several look like LJT configurations. Several of the backshells and
strain reliefs are quite old.

Bendix used to make this type of connector. The PT and MS series.

They are full MIL spec, may have either removable or non removable pins,
and may have either solder or crimp connections.

Mating connectors are moderately expensive in single quantities from
$100 to $600 depending on shell size (diameter) and pin configuration.

I have two of these:

1100-0-1100 volts center tapped 280 mA ccs mil spec plate xmfrs. 120 vac primary. Run two of these in series on 240vac input for 2200 volts center tapped at 280 mA for a nice amp. Note these are 100% duty cycle ratings, ergo, AM or RTTY condx. High quality ceramic insulators.

price is $50 each or $90 for the pair. These are abt 35 pounds each. Plus shipping from San Diego 92139.

It is collectable. I think what you may have is an "Wavemeter". When tuned to the same frequency as the source of RF from the transmitter, the small lamp will glow. By reading the dial you can get an idea as to the frequency of the transmitter. I have a complete set of wavemeters and your description sounds just like what I have.

3637. seeking info on radio model number

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-18 00:00:00 UTC
From: jlnordbo@facstaff.wisc.edu
Message-ID: <7rvkud$hr8$1@news.doit.wisc.edu>
Source record: 78953

Greetings! I would very much like to get some information on a radio I used to own. It doesn't qualify as a 'boat anchor' quite yet--it's a 1970's era Panasonic portable.

I do not remember the model number. By the description I've sent to several newsgroups and radio club sites, I've been told I am describing an RF2200 or RF1150. Now that I have seen a picture of the 1150, I know that's not it. The radio I am looking for is very similar to the 1150, but probably a bit less 'upscale' than the 1150.

Below is a description of the radio I am looking for:

It is a portable Panasonic AM/FM (&SW) radio manufactured in the '70s. Dimensions are *about* 10x10x2. It was all black and had a large (about 8-9") speaker on the "front", with volume, treble, and bass knobs on the "top" (not at the top of the front side of the radio, but on the top of the radio. I can't remember where the tuning knob was--probably on the "side"--but the analog dial was on the "top". Also, the three (?four?) position toggle switch for changing bands was on the "top". It had a sleep timer down toward the bottom on one side. I think it had a squelch control knob (somewhere--on the other side??). It also had a removable and adjustable nylon handle/shoulder strap. I think it retailed for about US$99, but this is a guess.

The main diffrence that I can tell from the picture of the 1150 and the radio I had is:

Mine had:
-no rotating ferrite bar antenna -- I think it must have had only a telescoping antenna

-most controls on the"top" and "sides"; the speaker takes up most of the surface area of the "front"

-removable nylon shoulder strap (I didn't see this in the picture but I guess that doesn't prove that the 1150 *doesn't* have one...)

-all black finish

I would very much appreciate any information about the radio I have described. Specifically, the model number and if possible, information about where I can see a picture of it so that I know it's the one I am looking for. Once I know the model number, I

can start 'shopping' for one.

Thanks in advance for your assistance!

Regards,
John P. Nordbo

3638. ARN6 radio Compass Receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-18 00:00:00 UTC
From: Lionel Sharp <vk4ns599@ozemail.com.au>
Message-ID: <37E3881F.CA06B689@ozemail.com.au>
Source record: 78954

G'day Lawrence,

I have a number of these devices and did actually get one of them going on the broadcast band for a while.

There are several problems with the receivers:-
1. They are big and bulky
2. Operate off 24 volts
3. Need a Control Box and interconnecting bowden cable which are extremely had to find. I think the reason for this is they are left in the aircraft when the ARN6 Receivers are removed.
4. A special Mounting Rack is needed to interconnect with all those pins on the back of the receiver. These mounting racks are also very difficult to obtain.
5. The maintenance manual is about 3 inches thick and also difficult to find.
Best of luck with them
I think that they were used in many aircraft notably the Hercules and F86 Sabre. Whilst they are a pretty good receiver I don't think that there is much interest in them
Lionel L Sharp

Without the control box and the AS-313 loop antenna, you may have a go at locating a buyer. Of course, if someone needs a spare for their T-33 or something. You are correct, the ARN-6 was a nice ADF.. much better that the MN-26 or the ARN-5. I can't tell you the number of times I/we used that ADF naving back to the MIV Rbn and subsequently Dover AFB, after a target mission out over the Atlantic. (Anyone out there work Mangle or Bean Soup GCI??) Good luck..

3651. FS: QST BACK ISSUES $1.00

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-18 00:00:00 UTC
From: Andrew <xandrew@tropicom.net>
Message-ID: <37E3D16F.62E6AEED@tropicom.net>
Source record: 78967
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.space

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you
are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea. (May issue is missing page 73)
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45

From: kb8uhu@aol.com
Message-ID: <19990918180403.01590.00001508@ng-fn1.aol.com>
Source record: 78970

Just got done fixing up a Hallicrafters SX-24. The darn thing works and sounds great (after much tinkering). My question is how exactly the bandspread works. The band switch has a 3A and a 3B position. Where should the main tuning dial be set for these positions? I hate to sound ignorant, but before I get the tweaker out, I need to be sure if I really need to tweak or not.

Source record: 78980

Hello All,

Can anyone tell me what's up with this thing?
I down loaded the 5100"B" manual from BAMA and now I'm really confused!

What does the meter read in the "GRID" position?

What are typical readings?

What is full scale in the "GRID" position?

The rig works great (after putting a T-195 mod xfmr ion it)
The meter seems to be telling me Ip on the driver rather than grid to the PA, Just guessing here.

Thanks,

Dan N8ETQ Cleveland, Oh.

I have for sale a KWS-1 transmitter (ser.no. 1028) for $1400.00 and
also
a 75a4 (ser.no. 3041) that has 3.1 filter and 4-1 tuning knob. This is
one of the cleanest looking 75a4' I have ever seen. I will try to get
digt. photos soon for all to see. If you are looking for one of the
finest and cleanest to come along in a while this is it. I am asking
$1250.00 for this rec. I have original manual for KWS-1 and I think I
have the same for the 75a4. I would prefer a local pick-up near Detroit
for these items so they don't get damaged.

I have not had the KWS-1 on the air, but was working when purchased.
The 75a4 plays as well as it looks. TNX DE AA8WL Sam

SSB5@daimlerchrysler.com
or

I have an ARN-6 operational, complete and unmodified as in the aircraft installation. It wasn't that difficult finding the bits - xcvr, rack, loop, control box, connectors, manual etc. It's not THAT big and bulky, either, at 15-1/4" x 11-3/8" x 7-5/16". To quote from the T.O. 12R5-2ARN6-2 (page 1) "It is designed smaller and lighter than other automatic radio compass equipments for the purpose of using it in small aircraft".

The 26.5V DC requirement is quite modest, ~ 4A. There's a bit of wiring involved, but the manual is very clear on where it all goes. It's definitely "doable" but you need to want to do it and have a few techno smarts. An aircraft background helps, too.

While the ARN-6 probably doesn't have a place in every amateur's shack, ther are those out there who do appreciate it for what it is and have the resources to use it effectively.

Source record: 78899

Guys;
I've got 2 clean but very heavily modified radios here- a BC779 (Hammarlund-similar to SP110) and a BC 348.These are parts units only,missing tubes.No power supplies.Also loads of early Sams for the first few years (late 40's). Dont email,call me at 619-271-8294 and haul this stuff away in the next few days. I cant ship it,you must pick it up.
Thanks,
Mike Zuccaro
PS-I found em this way,I didnt modify them!

Steve

In this country BC221s go for the equivalent of $US10 - 15.

Simon

PS If you really want people to reply to you, try using your real
e-mail address - it doesn't normally result in too much spam and you
get responses from people that don't like posting to the public group!

Source record: 78903

The following are for sale due to an impending move that will requires reducing the "basement boatanchor inventory". All prices are plus shipping.

ARC-5 Parts (1 lb.)

Octal socket with snap ring
$0.25
3 section tuning capacitor for 190-550 kc. receiver (BC-453) $2.50
3 section tuning capacitor for 6-9.1 Mc. receiver (BC-455) $2.50
3 X .05 bypass capacitor $0.25
.006 paper capacitor $0.25
Receiver antenna trimmer capacitor $0.50
Receiver antenna connector $0.25
Transmitter oscillator padder capacitor $1.00
Transmitter oscillator tuning capacitor $2.00
Transmitter dial (specify 4-5.3, 5.3-7, 7-9.1) $0.50

Tubes - Tested good on I-177 or Hickock 6000 tester, unless noted. 1 lb. This is just a small sample, email with your needs.

Variable Capacitors (see also ARC-5 Parts)

HAMMARLUND "TC-450-BW" - Large air variable transmitting capacitor, 45-300 pf, .07" plate spacing. Frame is 4-1/2" wide, 3-1/2" high, 7" deep. 1/4" shaft, 1-1/2" long. Ceramic insulation, 24 rotor plates, 23 stator plates. Good condition. Price: $10 (3 lbs.)

TCS Receiver capacitor/dial assembly - 3 section capacitor with 4" dial and reduction drive (25 turns to cover range). 7" wide, 3-1/2" high, 3-1/2" deep. 1/4" shaft. Ceramic insulation, 2 sections 10-280 pf, 1 section 10-360 pf. Good condition. Price: $3 (4 lbs.)

JOHNSON 100R36 - Air variable capacitor, 10-100 pf, .07" plate spacing. 1-3/4" wide, 1-3/4" high, 4-1/2" deep. 1/4" shaft 1/2" long (front), 1/4" long (rear). Can be ganged. Ceramic insulation. NOS in original box, mint condition. Price: $8 each (2 lbs. each) (have 2)

Connectors, Adapters and Tube Sockets (just a sampling) Shpg. wts. 1 lb.

9 pin "octal type" connectors - look like octal but they're not! Used on some E.F.Johnson gear. Fit Amphenol "RS" mounting rings and cable bells.
One matched pair male/female (pins 6 and 8 missing) $1, one socket (female) with all 9 pins, $1. Includes your choice of chassis mounting plate and spring
or cable bell (specify) Used, good condition.

AMPHENOL 83-22SP connectors - look just like UHF, but have TWO pins, plus outer shield. Used with RG-22/U dual coax. Have 2 chassis mount female and 1 cable mount male. Unused NOS condition. Price: $1 each or $2 for all 3

AMPHENOL "Series 75" Microphone Connectors - Used on vintage gear such as Viking 2. 1 conductor and outer shield.

Type Description Quantity Price Quantity Price
PC1M Male, chassis mount 4 (New) $0.50 6 (Used) $0.25
MC1F Female, cable mount 6 (New) $0.50 4 (Used) $0.25

BNC Connectors - All are used, price $0.50 each

Type Description Qty.
UG-88-U Male, cable mount 5
UG-260-U Male, cable mount 3
UG-1094-U Female, chassis mount 15
UG-290-U Female, chassis mount 9

Amphenol "Series 75" Microphone to 1/4" Adapter - Adapts female MC1F plug to female 1/4" phone jack. (adapter is male PC1M and male 1/4" phone). For adapting mikes with MC1F to rigs with phone jack mike input. Price: $0.50 each

UHF to RCA Phono Adapter - Adapts male UHF plug (PL-259) to female RCA phono jack. (adapter is female UHF and male RCA). Perfect for Heath rigs like HW-101 which have RCA phono antenna connector. Silver plated, good condition. Specify long (1/2") or short (1/4") center pin. Price: $0.50 each (4 long, 7 short)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used and tested, good condition. Price $4 (4 lbs.)

Isolation/Step Down Transformer

Stancor P-6383 - Primary is switch-selectable 210/230/250 V, secondary is 115 V. Rated 100 VA. Upright mounting, has built-in switch and 2 prong output socket. Can be reversed for step-up use. Used, tested, good condition. Price $5 (8 lbs.)

Filter Chokes

GE Filter Choke - 10 Hy @ 60 ma., 215 ohms, 1000 V insulation. Hermetically sealed upright mounting with lug terminals. Used, paint is chipped but in good electrical condition. Price $4 (4 lbs.)

Rack Panels - Steel

Special Panel - 19 X 8-3/4" Black Wrinkle $2 8 lbs
Has 15x4 hinged door in top 2/3 of panel. Fair to good condition a few small holes, some rust.

Meter mounting panel, 19 X 5-1/4" Black Wrinkle $3 4 Lbs.
Has 15x4 opening with recessed masonite panel with holes for four 3-1/2" meters and provisions for glass so that meters are in a window and protected from contact. Masonite panel easily replaced, glass not included, VGC.

Chassis Bases - Unused

Size
(LxWxD) Finish Bud equ. Price Wt. Description

20x12x2 Gray Enamel None $8 12 lbs VGC
17x11x2 Zinc CB-770 $12 10 VGC

Hallicrafters Skybuddy S-19 (Late Version) Restored & Working with a One Year warranty. With
the radio is a copy of the owners manual....and in a separate
auction is the original manual. This
radio is excellent!! Cosmetics are almost
mint....exceptions....some previous owner put a Pilot light
in the front panel. And there a two small scratches on the top of
the radio.

Thanks
John K9UWA

I'm still looking for a winter project amp, a Henry or BTI console is
just what I want.
NON-FUNCTIONING, I can't afford a working unit, nor would I get the
enjoyment of rebuliding it then, would I?

I'm looking (again) for a decent, medium power military AM HF transmitter (2-12 MHz, minimum). The unit must be in demonstrable working condition. Transmitters such as ART-13, T-195A/B, etc. are the ilk I'm looking for, although something a bit bigger is fine, too. I will add cash to any deal, where appropriate. Something in the mid-Atlantic would be best, given shipping/delivery considerations. Thanks to all!

I have the following receivers available to trade (not sell):

Hammarlund HQ-180AC and speaker (reprint book)
Hallicrafters SX-73/R-274/GRR (missing dial lock) (original TM)
Hammarlund HQ-145C and speaker (no logo on spkr) (reprint book)
R-392/GRC-19 receiver (excellent) (w/ p.s.) (original TM)

3702. FS: Hallicrafters S-107 - $35.00

Newsgroup: rec.radio.amateur.boatanchors

Source record: 78923

Mostly for parts, but I guess you could restore it.

Glass good, no holes in cabinet, front panel pretty junky, and someone's
done some mods.

Again, mostly for parts I suggest.

3705. FS: NIB Stancor PC-8417 Power Transformers for ARC-5 Receivers, Used power transformer for Heathkit AR-3 receiver.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-19 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19990919141152.06151.00000006@ngol01.aol.com>
Source record: 78926

Hello,

I have for sale two Stancor PC-8417 power transformers. Primary: 120 V, HV secondary 440 VCT @ 50 mA, filament secondary #1 25.2 V @ 0.5 A, filament secondary #2 6.3 V @ 0.6 A. These are upright mounting type (no big square chassis hole to cut) mounting centers 2 X 1-9/16 inches. Shipping weight 4 pounds.

These units are NOS, in the original boxes, mint condition.

What makes these transformers "special" is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Filament winding #1 is just right for the heaters of the Command set receiver, and filament winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are such a good match for a Command set RX that

Asking price for these transformers is $15 each, or both for $25. Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them.

Also have the power transformer from a junked Heathkit AR-3 receiver. It's in fair condition (you'll probably want to repaint it), but is electrically OK. Shipping weight 2 pounds, asking price $3.

From: Steve Pazar <zarco@sonic.net>
Message-ID: <37E53C5F.1497@sonic.net>
Source record: 78930

Hi Gang,
I just picked up an MX-949 tube tester socket adaptor set that was originally used to upgrade the old I-177 tube testers. Don't have an I-177, but I was wondering if anyone has figured out how to use it with a TV-7 (A or D) tester. I'm especially interested in testing 826 and 829 tubes which the MX-949 has a socket for.

Steve

3710. Swap RA17 manual for RA17L

Hi,

Does anybody want to swap their *original* Racal RA17L manual for my *original* RA17 manual.

I would describe my manual as being in very good, looked after condition. Though it has seen a working life and some notes have been made in it. It is complete with an original blue print circuit diagram, as I expect yours should be.

Mike

Message-ID: <37e560b8_2@news.calweb.com>
Source record: 78932

I have a pair of Hammarlund BC-779 /SP400 superpro receivers that I'd like to find a home for. both receivers have the external, rack mount power supplies, The radios are grubby and will require a lot of scrubbing and tlc. They are complete and not bent up, just cruddy. One is equipped with what look like National metal skirted knobs, the other appears to be stock. The tubes are there. The are in original condition, but I have never fired them up nor at this point do I intend to do so------to many projects and I'm tired of tripping over them. They have been in dry storage for a few years. I have no docs on the units.

$100 for the pair as described. Prefer a local pickup in Sacramento, CA, but I can bring them to the next Livermore swap weather and Wife permitting. I can ship if buyer pays for the versapacking (4 boxes). from zip 95827

tnx for the read es 73

Bob, KE6F

Source record: 78939

Vector made these little deep-drawn aluminum cans with octal plugs on the bottom. They
made both cylindrical and ice-cube versions. I'll take either style.

Also, Mc Martin made some little plug-in modules for their broadcast mixers. I could use those as well.

E-mail me with what you've got.

Thanks,

Bill Jones

3728. For Trade: Tucson Amateur Packet Radio for Hammarlund or Hallicrafters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: William Brown <trainers@sympatico.ca>
Message-ID: <37E59920.EC40E3CC@sympatico.ca>
Source record: 78849

I have a Tucson Packet Radio terminal node controller with manual that I

would like to trade for a working Hallicrafters or Hammarlund Amateur Band receiver, or for a really good set of manuals for getting a Ham license in Canada, along with some tutoring.

The TNC was manufactured as a kit and assembled by a ham radio operator. He was ex-
airforce communications and the board is well assembled. The manual was a
second printing in February 1984. The software page says "TAPR/AMSAT AX.25
level 2 version 3.1". It can use 7 or 8 bit characters and supports 50 to
19,200 baud. It has on board power supply, serial and parallel port, 1200
baud radio modem, keyup timer, 8k of RAM, 32k of EPROM, VADCG and AX.25
protocols, simultaneous digipeater in either protocol, simultaneous
operation as a beacon in either mode, extensive trace and debug features,
onboard modem calibration, builtin LED frequency indicators, LED monitors
of critical and important parameters, audio input level adjustment (CWID,
PTT, transmitted data, received data carrier, reset), provision for
additional memory, wire wrap area for custom interfacing, link status
signals, and a 240 page manual. (obviously you can tell I am taking this

straight from the manual, most of which I don't have a clue what it means
:-))

There is no case for it per se, he assembled it and put it in a wood
and plexiglass box. But that shouldn't really matter, as long as it functions

email me: trainers@sympatico.ca

Hello Allen,

I presume you mean the 807 screen bypass. I don't know where to get electrolytics of that value, but I've got several "bathtub" paper/oil jobs that will work even better than an electrolytic, if you need them. I have 0.5, 1.0, and 2.0 uF @ 600 VDC units. I'm not sure what price to ask - what would a suitable electrolytic cost?

Dear All,

The St. Louis, MO area Antique Radio Collectors & Historians will have their fall swapmeet & picnic on Sunday, September 26th, 1999.

All are welcome!

American Legion Post Hall 300
4760 Heege Rd.
St. Louis, MO

Please Note That This is a New Location. Swap begins at 9:00 a.m. Lunch served starting at 11:30 a.m. Visitors are welcome and encouraged to bring items to swap! Swap is planned for the Legion Hall parking lot. In case of inclement weather, swap will be held inside the Legion Hall. We'll do it rain or shine!

No Swaptable fee. Please bring your own swaptable. A $3.00 donation is requested to cover the cost of the picnic.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus
Raffle of Radio & Radio-related items
Barbecue Pot-Luck Lunch (please bring a dish)
Antique & Classic Radio Demonstrations

For more details about this event and our club, please visit our club's home page:

http://home.stlnet.com/~keymaster/arch/arch_home.html

The web page included directions to the swapmeet site and a map. Pictures from our spring swapmeet/picnic are included too.

For questions, please e-mail me directly.

Thanks and look forward to seeing everyone!

I repaired them in base camp in Viet Nam!!! (Phouc Vien)
Practially all 33Cs trained at Ft. Devens knew the R-390A inside and out.
It was not seen as a highly skilled requirement for the ASA.
(Keeping the "Modern" solid state receivers working in the UH-1s was far more challenging!)
On returning, I taught repairing them to another "Generation".

I'm not sure I remember all about the radios now, as it's been 25+ years...

Hi Jim,

Well, I was thinking of using a new Polyester Film capacitor of 0.47 uF at
630VDC. I have had one radio amateur who says that he would not do that, but,
I'm not too sure if he knew what he was talking about. I can't see any problem
in using this in place of the 0.5 uF 600VDC electrolytic in the Viking II.

3739. Carrier Microphone Company: know anything?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: dmwilliams@tande.com
Message-ID: <7s69ij$4a2$1@nnrp1.deja.com>
Source record: 78860
Cross-posted to: rec.audio.pro,rec.radio.amateur.boatanchors,rec.audio.tech,rec.audio.tubes

Hi,
I have acquired a mic made by the Carrier Microphone Company of Inglewood CA, and was wondering if anyone knew anything about this company and their products.
It is similar to the Neumann bottle microphones, having a tubular preamp body roughly 4 inches in diameter, with a yoke-mount capsule on one end. Overall length is about 18 inches. The preamp uses two RCA 864 tubes, although it may have had Western Electric 264's originally. It's power supply is missing. It has a strap for (apparently) hanging the mic, so the capsule is on the bottom. It appears to have been made in the mid '30's, or earlier. Is this a broadcast/film soundstage condenser? A carbon mic with a preamp? A military artillery ranging mic? Any help is appreciated.
Thanks,
Doug

3743. request help with National NC57

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: pv <verrando@airmail.net>
Message-ID: <F954CD4D098A6E66.2505EDFB95A0BF6C.17FB7B91266EE63C@lp.airnews.net>
Source record: 78864

If this is a repeat post, my apologies.
This is a request for help from those more knowledgable than I.
I've got a working NC57B, was about to do an
alignment when I thought I'd measure voltages first.
I found the plate voltages at 375 where they should be 250,
and the rectifier filament voltage to be 400, where it should
be 270. Rectifier plate checks out ok at 300AC.
The audio output screen voltage is 375, where it
should be 250. Audio output plate is 350. Cathode voltages where
they should be. Voltage reg. anode is 175, not far off from 150 spec.
I thought the filter caps were good, as there
is no hum. Already replaced all the papers. Power transformer?
Thanks for any advice!
Pete

Frank:

I'm sorry but I can't share your experience.

I was a snot-nosed civilian teenager back in '74 when I first got mine
(nobody wanted them back then---tubes don't you know). I completely
disassembled it---including the RF section, gear train, tuning rack (or
whatever). After I re-assembled it---AND MAKING SURE THE KILOCYCLE DIAL
WAS SET CORRECTLY AND CAMS WERE POSITIONED PROPERLY BY POINTING TOWARD
THE INDEXING MARKS all it required was about a half or quarter turn to
peak all the coils. A very simple and straightforward procedure as
described in the TM. Now... let me get this straight... you said it
took you twelve hours to change-out that cam! Gosh... I knew the ---
lost out when they didn't bring me aboard!

I used it very successfully for weak signal VHF and UHF work, including
OSCAR's 6 and 7.

Hi all. I'm earnestly looking to buy a Kenwood SM-220 with the BS-8 Panadapter. It must be in 100% working order, and cosmetically clean, free of damage. Non smokers please only.

In particular, I'm looking for a rig with a stable, well-operating BS-8, with minimal drift from cold start.

I will pay the right price for the right rig; this is a keeper I'm looking for.

Please email to NeilR@innermedia.com, or you can call me at (603) 465-2788

Thanks in advance.

Neil, N1DMA

The AM-427 and the TF-132 modules are used in the PRC-8, PRC-9, and
PRC-10 military FM manpack radio sets, or possibly in the "A" variants
of the sets.

There were several modules similar to the two numbers you mention -
some of the modules had vacuum tubes inside and some were strictly
passive.

They're good to have as spare parts if you are trying to keep one of
the radios running (as I am), but not much use for anything else.

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

3758. FS: Various BA's, pick up in CT

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: "Yves A. Feder W1UX" <y.a.feder@snet.net>
Message-ID: <37E6A4D9.B1CECE48@snet.net>
Source record: 78879

Wish I could ship, but have no time. Also I would rather sell to an active BA ham than a "collector" -

Reason being, I want the buyer to check the gear out HERE and make sure it is satisfactory before buying it.
Everything works and looks good; there may be some blemishes here and there, and I cannot guarantee things
like sensitivity on receivers or "full output on 10m" on transmitters.

Again, pick up only - sorry, guys.

Combos:

Drake R4B/T4XB/AC3 or 4/MS4, looks very nice and clean. Working of course. Extra crystals. Some wear around tuning dial on receiver.
No time to use. Just sits there looking pretty. $325.00

Transmitters:

Elmac AF67 with AC PS. Works. Unmodified. Looks "decent" no butchering done; sounds fine on 160, 75 and 40. No time to play with!
$125.00

HOMEBREW pp 813 AMP: 80 - 10, professionally built, in two 3' 19" cabinets (one RF, one PS) works on 117VAC. Currently driven by a Viking Ranger II
with modified audio (sorry that is not for sale) Has muffin fan, HV variac (1300 - 3000VDC), excellent metering. With Ranger final resonant current at about 120 mA amp puts out at least a 375W carrier. I use it on 80 and 40; will work on 20, and anyone who knows 813's knows that for 10m you gotta be careful, so I never played with it up there. $600.00

Cabinets:

HUGE 19" double rack cabinet, about 5' high, equipment can be mounted front AND rear. Surprise your friends! Let them see you've got TWO big stations in 1 cabinet! Nice looking industrial surplus, on casters.
$100.00

Receivers:

Hammarlund SP600JX (I think 17) has the red knobs, also has an IF GAIN control (not seen too often) panel definitely needs repainting, some minor slippage on dial rim drive but sensitive and everything works. Drives a large high efficiency speaker very nicely. Rack mount, no cabinet. Panel needs refinishing. Has chipped and missing paint here and there. But nothing broken or missing! Not good for pretty, but good for strong! :) $225.00

HRO60: Very nice looking National HRO60, everything works very well. Xtal cal puts out 1000KC but not 100kc. Have a 100kc xtal for buyer to play with. Extremely sensitive and excellent selectivity. S meter occasionally sticks on high end; every once in a while there is some noise with no ant.connected (probably cap leakage) but reseating a tube or two gets rid of it completely.
Former owner put a product detector in NBFM plug inside;
there is a nicely installed toggle switch just to the right of the "Sixty".
Has A,B,C,D coils PLUS E & F coils (with dial scales!) the
E&F are actually HRO50 coils but obviously they are perfect for the 60.
Also has matching large National speaker (with a replaced
driver some time ago) and manual copy.
Because of everything going together on this one (WILL NOT
SEPARATE COILS OR SPEAKER) price is $600.00.

Hammarlund HQ170 with Telechron clock, and manual. (copy) Works very well, Quite sensitive, sounds excellent. looks good. Too many receivers. $225.00

Transformers:

Thermidor 500W mil surplus mod xformer. It's potted. Tag shows 200 hz bottom end, probably extends much lower. $100.00

T-368 mod xformer $100.00

Again sorry have to say PICK UP ONLY. I'm in South Central CT about halfway between New Haven and New London, about 10-15 min off Route 95. E mail w1ux@tinyradio.com

73 Al W1UX

PS: Some of the gear listed in my earlier posting and not shown here has been sold. Tnx -

Hello,

WB8RCR has recently posted a new version of his program, 'QSL Maker' - check it out at http://hfradio.org/wb8rcr/

This is a Windows 95 program, It will not work under Win 3.1. The program has also been used on Windows 98 and Windows NT Workstation 4.0.

- When you first bring up the program, you are shown a dummy QSL design.

- Simply enter your call and address and you have a useable, if somewhat dull, QSL.

- Your call, name and address are remembered for future launches.

- You can adjust the position, color, and font for all the elements of the card.

- You can use a Windows bitmap as a background for your card.

- Once you have the design you like, you can save it for future use. In fact, you can save any number of designs for special purposes, events, etc.

- There are 2, free-form lines for your QRP-L #, FISTS #, 10-10 #, grid square, awards, etc.

- The info block can be removed for those who would like to write this information on the back.

- Dockable toolbars, put them where you want.

- There is a full-blown installation program, and complete deinstall.

- There is extensive help.

- If you use custom colors, they are remembered across launches.

Again, this is software by WB8RCR. Come check it out.

3763. ATTN COLLECTORS: WW2 Transmitter\receiver forsale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: JD&SS <j.dupuis@arnprior.com>
Message-ID: <37E6C48B.3A10@arnprior.com>
Source record: 78884

Marconi Transmitter-Receiver TYPE-PN1-B

This transmitter\receiver was designed for low power portable or fixed station applications primarily for use by the armed services. The PN1-b embodies a low power transmitter, a superheterodyne receiver, with a 3 inch permanent magnet loudspeaker incorporated. It is used with a straight wire antenna up to a quarter wave in lenght (included). The PN1-B measures approx 16" x 16" x 10" A battery box assembly was available for use in a semi fixed station. It provides accommondation for a heavy duty combination A and B battery pack, which is capable of operating the equipment for 75-100 hours. The assembly includes a six foot cable for interconnection with the transmitter-receiver unit. Unit weighs approx 45lbs with battery (not incl) The transmitter will deliver a carrier power output of 2-2.5 wattsbetween 3.0-6.0 megacycles. The receiver is continuously tunable over the same frequency range as the transmitter. The receiver employs six vaccume tubes in a superheterodyne circuit, providing high sensitivity,selectivity,signal to noise ratio and image attenuation. Automatic volume control is used for telephone reception but is automatically removed when the receiver is switched over for the reception of CW signals.

I have a photocopy of the operation\service manual which shows operating instructions, alignment proceedures, as well as parts list and schematics. Also attatched is a letter from a chief signals officer who speakes of their use during the early years of WW2 which was primarily used by naval landing parties and considered rare at that time.

This unit is in imaculate condition complete with roll-out wire antenna, headphones\mic, cw key. Even the canvas cover is in excellent condition.

I have a few pictures which were taken with a digital camera that are available upon request. This piece is of museum quality & condition and will only consider "serious" inquiries\offers.

3766. Dead Atlas 350XL FS $125 shipped

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: zeitler@ibm.net
Message-ID: <37e6d431@news1.prserv.net>
Source record: 78887
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Rcvr is really hosed. Pots are dirty. Power out is only 3 watts on SOME bands, other bands are dead. Also has the optional Aux Osc. module number 311. Serial number of the rig is 2725 CA. Front panel is very very nice, around an 8.5 to 9 out of 10. Top cabinet cover is fair. No documentation. No idea what is wrong with the rig. Front panel lights come on as well as the digital readout but the readout does not change when the vfo is tuned.

sold as-is only for $125 shipped.

Lane Zeitler

All,
I have for sale,

Heath DX60,HR10,HG10
The DX60 is ex to near mint. The HR10 has one scratch on the top. The HG10 has been repainted. These are not the A oe B model.This is the first models before the A and B models. All work ex. $225 + shipping

Drake T4XB,R4B,MS4,and PS,all in ex working condition. The only thing wrong is the off and on switch is not working on the T4XB, a switch was monted on the PS to take the place. $450+ shipping.

Thanks,
George

3770. FS: ===<Collins>=== 32S-3 Transmitter and 516F-2 PS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-20 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <37E6EF2B.57F596F8@yahoo.com>
Source record: 78891
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi Folks,
I have for sale (again) the Collins 32S-3 transmitter and matching
516F-2 station power supply. Flakey guy never sent payment. Then hard
drive crashed and I lost next folks in line -- sorry.

This is extra class gear for class A operators only. As used by his
majesty JY1 and the senator K7UGA. Collins Quality.

32S-3 Transmitter is S/N 11K, winged emblem,
and shows full output on all bands. Cosmetically, front panel is
perfect (no rub marks) and chassis condition is very clean. Cabinet
shows only a few minor surface nicks. Never repainted. Metal trim
ring.
I have tested it on the air and do not note any defects. Comes with
photocopy of manual. http://www.xprt.net/~joentam/binary/32s3.jpg
http://www.xprt.net/~joentam/binary/32s3in.jpg

- And -

516F-2 Station power supply. Also winged. near as I can tell, this one
is
completely factory stock. No speaker mounted inside it. Grill is
original.
Cabinet shows a few surface scuffs only -- nothing ugly or deep into the
metal.
metal trim ring. includes 5R4 and 5U4 rectifier tubes too. Will need
to ship
this in two boxes (cabinet separate from PS) to avoid damage.
http://www.xprt.net/~joentam/binary/516f2.jpg

Price for the pair is $700 + shipping. Next stop is ebay if I get
flakey lids,
kids, or space kadets on this stuff. No tire kickers please. For
those that know....know.

I had several queries for this, thought it was sold, hard drive crashed,
and never received payment. So, it is up for sale again.

thanks,
Joe K7JOE

In article <7s4vtkaic1@nntp9.atl.mindspring.net>, cccacutts@mindspring.com (Allen Cutts) writes:

>Well, I was thinking of using a new Polyester Film capacitor of 0.47 uF at >630VDC.

Sounds good. The size isn't critical, as long as it's big enough.

> I have had one radio amateur who says that he would not do that, but,
>
>I'm not too sure if he knew what he was talking about. I can't see any >problem
>in using this in place of the 0.5 uF 600VDC electrolytic in the Viking II.

I don't see any problem, electrically, using either an electrolytic, "bathtub", or polyester film. One thing to consider is that the "bathtub" and poly film types will probably last almost forever, while an electrolytic will eventually need to be replaced again.

What he may have been referring to is the fact that a polyester film cap isn't "historically correct", which matters to some folks. It all depends on whether you are "restoring" the rig, or fixing it up to get it to work again. A Viking 2 is common enough that it's not a rarity, and a purist can always put an original style capacitor back in, if desired. The paper oil "bathtub" caps ARE historically correct - Johnson used an electrolytic to save money.

Another poster said that new "bathtubs" (I just love that kind of jargon) sell for $3.50, so I figure my old ones should go for about a dollar to a dollar and a half - tops. If you or anybody else is interested, just drop me an email. I will test them before shipping (and I promise not to ship them charged!)

From: "Edward J. Engelken" <ed_engelken@my-deja.com>
Message-ID: <7s8379bpr1@nnrp1.deja.com>
Source record: 78754

Pete:

If you have 300 VAC on the rectifier plates and 400 VDC on the rectifier filament, then the power supply doesn't have the proper load. High B+ usually indicates low current draw. The biggest consumer of current in your receiver is the AF output tube (6V6). Make sure that the cathode of the 6V6 is somewhere around 12-13 volts. The overall current consumption of the NC-57B should be around 70-80 ma. You may want to measure the B+ current and see if it is near 70 ma. Also, the anode of the voltage regulator should be very close to 150 volts, not more than 2 or 3 volts off. Check the big power resistor feeding the VR tube, if OK then perhaps the tube is bad. The VR tube makes up a part of the B+ current load, probably 20 ma or so.

Let us know what you find.

Best Regards,

Ed

3787. Any Atlas Expert?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-21 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <37e73fbf.18947347@news.pipeline.com>
Source record: 78758

I recently bought an Atlas DD6-C digital dial for my Atlas 210X.
My rig has the 5520KHz IF and I can't get the digital dial to read
correctly.

Another version of the Atlas 210 has an IF of 5645KHz.
The digital dial is off by 125KHz on the 80/40 mtr band but is off by
differing amounts on the upper bands. There's an internal jumper in
the dial which, if opened, only made the error different.

The docs I have state that a TTL PROM data driver is used to
set the IF offset and other parameters. Could I solve the
problem with a different PROM? Any available (obviously not from Atlas
Radio)??

Am I overlooking some other jumper or other possibility?

73,
Doug/WA1TUT

Mike,

Have you checked to see if your power supply really needs them. I looked for a long time tring to find those tubes, only to find out later that the Signal Corps had removed the tubes and soldered in diodes. It's a very common mod but it was not list in my manual.

From: staylor@lucent.COM
Message-ID: <453B16902112D211AAC400805F9FE7D301EA177C@NJ0117EXCH003U>
Source record: 78760

I was in the Army 1969-72 and my MOS (military occupational specialty) was 32C20C7 (Fixed station transmitter repair). We fixed anything from a T-368, 208U-10's to an AN/FRT-40 (40 KW PEP HF transmitter).
The R-390's were repaired at a local depot "in country" (Canal Zone in my case) by those with an Army MOS of 32B20. Most were trained in those days at Fort Monmouth (where I was an instructor in the Signal School during part of 1970). Repair training took 26 weeks, 8 hours a day for transmitter or receiver school.

Major equipment overhauls were occasionally done a stateside like Tobyhanna Army Signal Depot in PA. There was another repair Depot in Lexington KY. In the Canal Zone our 32B20 guys would troubleshoot down to component level if necessary on 90% of repairs. Real "problem" sub-assemblies would be sent back to Tobyhanna or other signal depots. With the federal stock number system, when a part (nut, bolt, insulator, gear, resistor cap. etc) had a FSN, I could order the to fix my transmitters. The receiver guys did the same. I can remember waiting months for one small part that had to be ordered directly from Collins Radio by some bureaucrat in Army procurement.

3793. Wanted: CBS Audi/Volu-Max, WE Mixer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-21 00:00:00 UTC
From: Doug_Hensley@generalhealth.ORG
Message-ID: <9909219379.AA937934047@generalhealth.org>
Source record: 78764

Broadcast engineers:

I'm looking for two old CBS units-

the Audimax for compression and the Volumax for peak limiting. They are solid state (analog) units made in the 60's.

A possible substitute for these might be the Dorrough Discriminate Audio Processor (I THINK the model is DAP-310).

If you have any experience with this type of equipment or have other recommendations, please get in touch.

I am setting up a Collins 300G AM rig on 160m and would like to establish a decent audio train for feeding it. Also looking for a 4 or 6 channel Collins WE mixer for same.

Simon,

TNX. I usually put my K9DCI@arrl.net, but must have forgotten that time.

I have one. My dad worked at Rauland Corp where they were made. I'm
wondering if there's a way to tell if the one he had was made there.

Larry,

I'd appreciate knowing if you find out anything about the 221. I know what they are, have one, but don't know what the market or interest is. It was THE method to measure frequency after WWII. My dad worked for Rauland where they were made and left one to me. I'm in contact with someone working on museum placement for it, but I'd like to know if anybody else cares.

Source record: 78776

Anyone have a manual for the Dentron "Super Tuner"? I need to know the power rating for this tuner. I have seen it described as "1 KW PEP", "500 Watts CW", and these numbers quoted as "Input" and "Output".

What does the manual have to say about the power rating?

I have two of these:

Mil spec 1100 volt center tap (1100-0-1100) 280mA ccs power xmfr. 120 volt primary. measures 5 1/2" wide by 4 1/2" deep by 8 1/2" tall. Weighs abt 35 pounds. Use in a voltage doubler to get 2900 volts or use in full wave bridge for 1600 volts. You can series these two primaries together for 240vac service and parallel the secondaries or put them in series for 2200 vac.

$50 each or both for $75.00. Shipping of course is extra. Ship via UPS ground from San Diego 92139.

Hello - I have the following for sale:

Hallicrafters SX-28 receiver, original knobs, great front panel, manual, working, but needs work, no cabinet, $150 US + shipping

(I know the following aren't really boatanchors, but they are big & heavy, so I think they're close!)

Zenith Trans-Oceanic Royal 1000-D multiband portable receiver, works good (probably need some contact cleaner), very good condition, with like-new front panel, unbent whip antenna, original log book, missing Wavemagnet internal antenna, minor corrosion on inside bottom panel from battery pack, $140 US + shipping

Zenith Trans-Oceanic Royal 3000-1 FM-AM multiband portable receiver, works great, good condition (clean grill, dial very good, unbent whip antenna; minor corrosion in battery box, easily by-passed with AC adapter), original log book, AC adapter (non-original), $150 US + shipping

Contact Brian, VE7BCU, North Vancouver BC, phone (604) 240-6513, besell@earthlink.net
Thanks for the listing.

The AM-427 and the TF-132 modules are used in the PRC-8, PRC-9, and
PRC-10 military FM manpack radio sets, or possibly in the "A" variants
of the sets.

There were several modules similar to the two numbers you mention -
some of the modules had vacuum tubes inside and some were strictly
passive.

They're good to have as spare parts if you are trying to keep one of
the radios running (as I am), but not much use for anything else.

From: dslosty@pipeline.com (dslosty)
Subject: Any Atlas Expert?

I recently bought an Atlas DD6-C digital dial for my Atlas 210X.
My rig has the 5520KHz IF and I can't get the digital dial to read
correctly.

Another version of the Atlas 210 has an IF of 5645KHz.
The digital dial is off by 125KHz on the 80/40 mtr band but is off by

differing amounts on the upper bands. There's an internal jumper in the dial which, if opened, only made the error different.

The docs I have state that a TTL PROM data driver is used to set the IF offset and other parameters. Could I solve the problem with a different PROM? Any available (obviously not from Atlas Radio)??

Am I overlooking some other jumper or other possibility?

73,
Doug/WA1TUT

From: JD&SS
Subject: ATTN COLLECTORS: WW2 Transmitter\receiver forsale

Marconi Transmitter-Receiver TYPE-PN1-B

This transmitter\receiver was designed for low power portable or fixed station applications primarily for use by the armed services. The PN1-b embodies a low power transmitter, a superheterodyne receiver, with a 3 inch permanent magnet loudspeaker incorporated. It is used with a straight wire antenna up to a quarter wave in lenght (included). The PN1-B measures approx 16" x 16" x 10" A battery box assembly was available for use in a semi fixed station. It provides accommondation for a heavy duty combination A and B battery pack, which is capable of operating the equipment for 75-100 hours. The assembly includes a six foot cable for interconnection with the transmitter-receiver unit. Unit weighs approx 45lbs with battery (not incl) The transmitter will deliver a carrier power output of 2-2.5 wattsbetween 3.0-6.0 megacycles. The receiver is continuously tunable over the same frequency range as the transmitter. The receiver employs six vaccume tubes in a superheterodyne circuit, providing high sensitivity,selectivity,signal to noise ratio and image attenuation. Automatic volume control is used for telephone

reception but is automatically removed when the receiver is switched over for the reception of CW signals.

I have a photocopy of the operation\service manual which shows operating instructions, alignment proceedures, as well as parts list and schematics. Also attatched is a letter from a chief signals officer who speakes of their use during the early years of WW2 which was primarily used by naval landing parties and considered rare at that time.

This unit is in imaculate condition complete with roll-out wire antenna, headphones\mic, cw key. Even the canvas cover is in excellent condition.

I have a few pictures which were taken with a digital camera that are available upon request. This piece is of museum quality & condition and will only consider "serious" inquiries\offers.

From:
Subject: Dead Atlas 350XL FS $125 shipped

Rcvr is really hosed. Pots are dirty. Power out is only 3 watts on SOME bands, other bands are dead. Also has the optional Aux Osc. module number 311. Serial number of the rig is 2725 CA. Front panel is very very nice, around an 8.5 to 9 out of 10. Top cabinet cover is fair. No documentation. No idea what is wrong with the rig. Front panel lights come on as well as the digital readout but the readout does not change when the vfo is tuned.

sold as-is only for $125 shipped.

Subject: For Trade: Tucson Amateur Packet Radio for Hammarlund or
Hallicrafters

I have a Tucson Packet Radio terminal node controller with manual that I

would like to trade for a working Hallicrafters or Hammarlund Amateur
Band receiver, or for a really good set of manuals for getting a Ham
license in Canada, along with some tutoring.

The TNC was manufactured as a kit and assembled by a ham radio operator.
He was ex-
airforce communications and the board is well assembled. The manual was
a
second printing in February 1984. The software page says "TAPR/AMSAT
AX.25
level 2 version 3.1". It can use 7 or 8 bit characters and supports 50
to
19,200 baud. It has on board power supply, serial and parallel port,
1200
baud radio modem, keyup timer, 8k of RAM, 32k of EPROM, VADCG and AX.25
protocols, simultaneous digipeater in either protocol, simultaneous
operation as a beacon in either mode, extensive trace and debug
features,
onboard modem calibration, builtin LED frequency indicators, LED
monitors
of critical and important parameters, audio input level adjustment
(CWID,
PTT, transmitted data, received data carrier, reset), provision for
additional memory, wire wrap area for custom interfacing, link status
signals, and a 240 page manual. (obviously you can tell I am taking this

straight from the manual, most of which I don't have a clue what it
means

:-))

There is no case for it per se, he assembled it and put it in a wood and plexiglass box. But that shouldn't really matter, as long as it functions

From: Joe K7JOE
Subject: FS: ====== 32S-3 Transmitter and 516F-2 PS

Hi Folks,
I have for sale (again) the Collins 32S-3 transmitter and matching 516F-2 station power supply. Flakey guy never sent payment. Then hard drive crashed and I lost next folks in line -- sorry.

This is extra class gear for class A operators only. As used by his majesty JY1 and the senator K7UGA. Collins Quality.

32S-3 Transmitter is S/N 11K, winged emblem,
and shows full output on all bands. Cosmetically, front panel is perfect (no rub marks) and chassis condition is very clean. Cabinet shows only a few minor surface nicks. Never repainted. Metal trim ring.
I have tested it on the air and do not note any defects. Comes with photocopy of manual. http://www.xprt.net/~joentam/binary/32s3.jpg
http://www.xprt.net/~joentam/binary/32s3in.jpg

- And -

516F-2 Station power supply. Also winged. near as I can tell, this one
is
completely factory stock. No speaker mounted inside it. Grill is
original.
Cabinet shows a few surface scuffs only -- nothing ugly or deep into the
metal.
metal trim ring. includes 5R4 and 5U4 rectifier tubes too. Will need
to ship
this in two boxes (cabinet separate from PS) to avoid damage.
http://www.xprt.net/~joentam/binary/516f2.jpg

Price for the pair is $700 + shipping. Next stop is ebay if I get
flakey lids,
kids, or space kadets on this stuff. No tire kickers please. For
those that know....know.

I had several queries for this, thought it was sold, hard drive crashed,
and never received payment. So, it is up for sale again.

thanks,
Joe K7JOE

From: "Yves A. Feder W1UX"
Subject: FS: Various BA's, pick up in CT

Wish I could ship, but have no time. Also I would rather sell to an active BA ham than a "collector" -

Reason being, I want the buyer to check the gear out HERE and make sure it is satisfactory before buying it.
Everything works and looks good; there may be some blemishes here and there, and I cannot guarantee things
like sensitivity on receivers or "full output on 10m" on transmitters.

Again, pick up only - sorry, guys.

Combos:

Drake R4B/T4XB/AC3 or 4/MS4, looks very nice and clean. Working of course. Extra crystals. Some wear around tuning dial on receiver. No time to use. Just sits there looking pretty. $325.00

Transmitters:

Elmac AF67 with AC PS. Works. Unmodified. Looks "decent" no butchering done; sounds fine on 160, 75 and 40. No time to play with!
$125.00

HOMEBREW pp 813 AMP: 80 - 10, professionally built, in two 3' 19" cabinets (one RF, one PS) works on 117VAC. Currently driven by a Viking

Ranger II
with modified audio (sorry that is not for sale) Has muffin fan, HV variac (1300 - 3000VDC), excellent metering. With Ranger final resonant current at about 120 mA amp puts out at least a 375W carrier. I use it on 80 and 40; will work on 20, and anyone who knows 813's knows that for 10m you gotta be careful, so I never played with it up there. $600.00

Cabinets:

HUGE 19" double rack cabinet, about 5' high, equipment can be mounted front AND rear. Surprise your friends! Let them see you've got TWO big stations in 1 cabinet! Nice looking industrial surplus, on casters. $100.00

Receivers:

Hammarlund SP600JX (I think 17) has the red knobs, also has an IF GAIN control (not seen too often) panel definitely needs repainting, some minor slippage on dial rim drive but sensitive and everything works. Drives a large high efficiency speaker very nicely. Rack mount, no cabinet. Panel needs refinishing. Has chipped and missing paint here and there. But nothing broken or missing! Not good for pretty, but good for strong! :) $225.00

HRO60: Very nice looking National HRO60, everything works very well. Xtal cal puts out 1000KC but not 100kc. Have a 100kc xtal for buyer to play with. Extremely sensitive and excellent selectivity. S meter occasionally sticks on high end; every once in a while there is some noise with no ant.connected (probably cap leakage) but reseating a tube or two gets rid of it completely.
Former owner put a product detector in NBFM plug inside;
there is a nicely installed toggle switch just to the right of the "Sixty".
Has A,B,C,D coils PLUS E & F coils (with dial scales!) the
E&F are actually HRO50 coils but obviously they are perfect for the 60.
Also has matching large National speaker (with a replaced
driver some time ago) and manual copy.
Because of everything going together on this one (WILL NOT
SEPARATE COILS OR SPEAKER) price is $600.00.

Hammarlund HQ170 with Telechron clock, and manual. (copy) Works very well, Quite sensitive, sounds excellent. looks good. Too many receivers. $225.00

Transformers:

Thermidor 500W mil surplus mod xformer. It's potted. Tag shows 200 hz bottom end, probably extends much lower. $100.00

T-368 mod xformer $100.00

Again sorry have to say PICK UP ONLY. I'm in South Central CT about halfway between New Haven and New London, about 10-15 min off Route 95.

E mail w1ux@tinyradio.com

73 Al W1UX

PS: Some of the gear listed in my earlier posting and not shown here has
been sold. Tnx -

Hello Allen,

I presume you mean the 807 screen bypass. I don't know where to get
electrolytics of that value, but I've got several "bathtub" paper/oil jobs
that
will work even better than an electrolytic, if you need them. I have 0.5,
1.0,
and 2.0 uF @ 600 VDC units. I'm not sure what price to ask - what would a
suitable electrolytic cost?

The bathtub capacitors sell for about $3.50 each at this site:
http://www.agtannenbaum.com/milspec.html

They show some 0.5 mF bathtub mil-spec 600 volt ones.

Sounds good. The size isn't critical, as long as it's big enough.

> I have had one radio amateur who says that he would not do that, but,
>
>I'm not too sure if he knew what he was talking about. I can't see any

>in using this in place of the 0.5 uF 600VDC electrolytic in the Viking II.

I don't see any problem, electrically, using either an electrolytic,
"bathtub",

or polyester film. One thing to consider is that the "bathtub" and poly film types will probably last almost forever, while an electrolytic will eventually
need to be replaced again.

What he may have been referring to is the fact that a polyester film cap isn't
"historically correct", which matters to some folks. It all depends on whether
you are "restoring" the rig, or fixing it up to get it to work again. A Viking
2 is common enough that it's not a rarity, and a purist can always put an original style capacitor back in, if desired. The paper oil "bathtub" caps ARE
historically correct - Johnson used an electrolytic to save money.

Another poster said that new "bathtubs" (I just love that kind of jargon) sell
for $3.50, so I figure my old ones should go for about a dollar to a dollar and
a half - tops. If you or anybody else is interested, just drop me an email. I
will test them before shipping (and I promise not to ship them charged!)

Mike,

Have you checked to see if your power supply really needs them. I looked for
a
long time tring to find those tubes, only to find out later that the Signal
Corps had removed the tubes and soldered in diodes. It's a very common mod
but
it was not list in my manual.

Subject: QSL Maker

Hello,

WB8RCR has recently posted a new version of his program, 'QSL Maker' - check
it out at http://hfradio.org/wb8rcr/

This is a Windows 95 program, It will not work under Win 3.1. The program
has also
been used on Windows 98 and Windows NT Workstation 4.0.

- When you first bring up the program, you are shown a dummy
QSL design.

- Simply enter your call and address and you have a useable,
if somewhat dull, QSL.

- Your call, name and address are remembered for future launches.

- You can adjust the position, color, and font for all the
elements of the card.

- You can use a Windows bitmap as a background for your card.

- Once you have the design you like, you can save it for future
use. In fact, you can save any number of designs for special
purposes, events, etc.

- There are 2, free-form lines for your QRP-L #, FISTS #,
10-10 #, grid square, awards, etc.

- The info block can be removed for those who would like to
write this information on the back.

- Dockable toolbars, put them where you want.

- There is a full-blown installation program, and complete
deinstall.

- There is extensive help.

- If you use custom colors, they are remembered across launches.

Again, this is software by WB8RCR. Come check it out.

From: p34901@hotmail.com
Subject: RACAL RA-253 Communications Receiver

I have a RACAL RA-253 Communications Receiver made in England. The Dual
channel Receiver has been designed as a high performance equipment
having entirely separate singal paths, a video channel for
direction-finding, and an audio channel for monitoring the signal. The
receiver covers a frequency range from 1 to 30 Mhz (AM, CW & SSB). The
selectivity is 13, 6.5, 3, 1.2, 0.3 & 0.1 Hz. This is one of the best
and the last tube receivers built by RACAL for the National Defense of
Canada. It is extremely sensitive and selective receiver for
professional use, and has the separate power supply and 3 binders of

user and service manuals. It is somewhat like two RA-17s in one unit
for diversity applications. This is an extremely rare receiver...
perhaps one of few in the world. It works fine and cosmetically very
good (9/10+). I will accept the best offer or possible trade (this is
definitly not a receiver for an average person like me!). I will get a
JPEG very soon for those who are interested.

From: "pv"
Subject: request help with National NC57

If this is a repeat post, my apologies.
This is a request for help from those more knowledgable than I.
I've got a working NC57B, was about to do an
alignment when I thought I'd measure voltages first.
I found the plate voltages at 375 where they should be 250,
and the rectifier filament voltage to be 400, where it should
be 270. Rectifier plate checks out ok at 300AC.
The audio output screen voltage is 375, where it
should be 250. Audio output plate is 350. Cathode voltages where
they should be. Voltage reg. anode is 175, not far off from 150 spec.
I thought the filter caps were good, as there
is no hum. Already replaced all the papers. Power transformer?
Thanks for any advice!
Pete

Subject: St. Louis, MO Antique Radio Swapmeet 9/26/99

Dear All,

The St. Louis, MO area Antique Radio Collectors & Historians will have
their fall swapmeet & picnic on Sunday, September 26th, 1999.

All are welcome!

American Legion Post Hall 300
4760 Heege Rd.
St. Louis, MO

Please Note That This is a New Location. Swap begins at 9:00 a.m.
Lunch served starting at 11:30 a.m. Visitors are welcome and encouraged
to bring items to swap! Swap is planned for the Legion Hall parking
lot. In case of inclement weather, swap will be held inside the Legion
Hall. We'll do it rain or shine!

No Swaptable fee. Please bring your own swaptable. A $3.00 donation is
requested to cover the cost of the picnic.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus
Raffle of Radio & Radio-related items
Barbecue Pot-Luck Lunch (please bring a dish)
Antique & Classic Radio Demonstrations

For more details about this event and our club, please visit our club's
home page:

http://home.stlnet.com/~keymaster/arch/arch_home.html

The web page included directions to the swapmeet site and a map.
Pictures from our spring swapmeet/picnic are included too.

For questions, please e-mail me directly.

Thanks and look forward to seeing everyone!

Frank:

I'm sorry but I can't share your experience.

I was a snot-nosed civilian teenager back in '74 when I first got mine (nobody wanted them back then---tubes don't you know). I completely disassembled it---including the RF section, gear train, tuning rack (or whatever). After I re-assembled it---AND MAKING SURE THE KILOCYCLE DIAL WAS SET CORRECTLY AND CAMS WERE POSITIONED PROPERLY BY POINTING TOWARD THE INDEXING MARKS all it required was about a half or quarter turn to peak all the coils. A very simple and straightforward procedure as described in the TM. Now... let me get this straight... you said it took you twelve hours to change-out that cam! Gosh... I knew the --- lost out when they didn't bring me aboard!

I used it very successfully for weak signal VHF and UHF work, including OSCAR's 6 and 7.

From: Frank
Subject: Who worked on R-390s in the Army?

On Mon, 20 Sep 1999 09:45:37 -0300, Mark wrote:

Hey, Mark- I should have hired you to do the job! Seriously, while the TM's instructions on lining up the cams towards the index marks, etc.is quite clear, there are several key issues that were not mentioned in my copy, such as the operation and indexing of the multiturn intermittent gear that turns the main bandswitch only when a front end coil change is required [.5-1, 1-2,
2-4, 4-8, etc] Once I figured that one figured out, then I got pretty anal about making sure the switch wafers were perfectly centered where they needed

to be, regardless of direction of approach. There was some serious binding in
the operation of one of the cam shafts which probably was the cause of one of
the clamps breaking, repairing this required de-pinning the cams from the
shaft, polishing the scoring from the shaft, then re-assembly. While the beast
was apart, I took the opportunity to run the gears and other parts through a
borrowed ultrasonic cleaning bath before drying them, applying a lube film and
reassembly. As you wrote, once the mechanics were right, RF alignment was a
piece of cake.
Was the time and extra effort worth it? Yep. It's easy to tune the thing with
a single finger now instead of getting the dreaded "R-390 wrist' after an
evening of use. I've had the receiver for almost 20 years, still love it and
glad it's got a new lease on life.
Maybe I'll get cocky and start on a basket case R-389 I've had in storage.
regards,
-f

I have tried to sell a couple of them, with manuals, at the monthly swaps out here in So. Cal. Even at prices of $5.00, no takers. Finally tossed them in the dumpster.

In article <snoskow11woksons-2109991615400001@il75-fc-mac1-24.acpg.cig.mot.com>, snoskow11woksons@liame.tom.com (Steve Noskow) wrote:

Message-ID: <37e87eb2.49999298@news.pipeline.com>
Source record: 78804
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently bought an Atlas DD6-C digital dial for my Atlas 210X.
My rig has the 5520KHz IF and I can't get the digital dial to read
correctly.

Another version of the Atlas 210 has an IF of 5645KHz.
The digital dial is off by 125KHz on the 80/40 mtr band but is off by
differing amounts on the upper bands. There's an internal jumper in
the dial which, if opened, only made the error different.

The docs I have state that a TTL PROM data driver is used to
set the IF offset and other parameters. Could I solve the
problem with a different PROM? Any available (obviously not from Atlas
Radio)??

Am I overlooking some other jumper or other possibility?

3843. BUYER BEWARE..LAND AIR COMM, NY

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-22 00:00:00 UTC
From: aidehua@aol.com
Message-ID: <19990922103917.19356.00000682@ng-fd1.aol.com>
Source record: 78814

I just spent $850 at Land Air Communications in NY. Thought I'd share my thoughts. I bought a Hammarlund Hq-215 receiver w/ matching speaker, and an EV 664 mic w/base.

The guy said he had five HQ 215s and would give me the best one. I specified that I was a collector and wanted one that was pristine. He stated he had one.

I got the HQ-215 and it was just okay. The cabinet did not have the original paint. It was, at least, five shades lighter than the original. The back of the unit had somebody's call letters deeply engraved, which was hidden by a Land Air Communications sticker. A couple of broken knobs, too. Very disappointing...

On the mic base, he promised one that was brand new. It was very used, with numerous scratches. This will need to be sanded and repainted. He did call me about this, but only after he'd shipped it. I told him it was misrepresentation, but "all sales are final." Very deceptive.

Be careful with this guy. He just wants to get rid of things! Insist on an accurate description. Maybe even get a digital photo...

Ed KA6DBY

To bad you tossed them. Lots of great parts inside. Temperature stable caps and inductors. Great source to align radio's with, since the output on the top connector is perfect for injection to the radio under test.

The on board XTAL allows accurate calibration. Good high performance RF generator, even today.

Marc

Message-ID: <7sbvtmfgf1@bgtnsc01.worldnet.att.net>
Source record: 78829

I suspect that you do not have it tuned to the correct sideband. Put the mode switch on lower sideband (LSB) for the 3.5 and 7 mhz bands and upper sideband for all the other bands.

I have an excellent condx power xmfr for the Heathkit SB-1000/Ameritron AL-80A amplifier. Pri. is 120/240. Secondary is abt 1200 vac at 500mA with a filament winding of 15 amps at 5 volts for the single 3-500Z. Also has a 10.5 volt control voltage winding. This is the stock xmfr and is 100% fully operational. Weighs abt 35 pounds. Buyer pays shipping from San Diego 92139 and someone willing to pickup will have priority.

$70.00 plus shipping.

Hmmmmm. Stretching the memory, but could it be a TG-34A. Those letters seem to have a familiar ring to them. Isn't that the paper tape code sending machine I used in high school to help learn the code ??

Does it look like it could hold two reels of film? There should be a thing in the lower middle which the paper tape passes over with a small hole and a photo cell inside. The paper tape has a black stripe which moved side to side to cover/uncover the hole and send code.

A good friend with limited Internet access asked me
to inquire about a Drake 1A anyone might be thinking
of selling.

He is a big fan of Drakes and likes to fix them up and
listen to them. He keeps trying to convince me to get
a 2B!

If you have a 1A please E-mail me and I will forward your
information. He is not a collector in the sense of paying big
money for pristine gear, he just has a couple of Drakes he has
fixed up to listen to and admire.

Thanks! & 73, DavidC K1YP

I have a next to Pristine SB220 F/S... This amp was built by a
TI Engineer and is as nice as they come... Full Legal Limit
output...Wired for 220V has manual... Works perfect 80-10.
$650 plus shipping or can deliver Belton, TX Hamfest....

Ed, thanks for your suggestions. The cathode of the 6V6 is
23 volts. I have yet to measure the B+ current draw, but
hope to Thurs. night.
The big power resistor appears to be good at 3.9k, which I believe is
how its marked. It runs very, very hot. I was checking screen
voltages and they are all 150, with the exception of 6V6, which
is currently 390. All tubes checked OK, the lowest being the RF
amp at 40%, all others 70% or better. VR appears to be OK, with the
anode at 155v. I'll keep you posted as I progress.
Thanks again- Pete

Yeah, I have "been there and done that" with regard to the boat anchor stuff -- I had a 30 x 20 foot room full of receivers, transmitters, etc. One day, after spending several hours working on the "end to end" adjustment of a Collins R388 VFO with a BC221 freq meter I woke up. With a freq counter, I was able to do the job in a few minutes. While there was some nostaglic fun to using a BC221, in the end I wanted to get the receiver on the air!! There is a reason that new and better equipment has been developed over the years. The "good old days" really weren't that good. Now they are just old.

As for the BC221's, I could not give them away to anyone, except the "dealers" who hover around the So. Cal. swap's, net's, and now, the news groups. Everyone of my ham friends turned down these freebies -- none of us need any more parts either; we all have garages filled with junk.

According to the info I have here, the speaker impedance of the HRO-7 is 5000 ohms. This may be why you're getting "weak" audio out, assuming you are using a 500/600 ohm speaker (even worse if its a straight, 8 ohm spkr.) Any help?.

John, I have a BC-1031-B that I'm looking for caps to replace most of those in the unit.
I'm especially looking for the single nut-mount filter caps. Some of mine have leaked fluid and I definitely need to replace them. Please let me know if you know of a supply (at reasonable prices). Thanks.

From: Denis Sharon <denis.sharon@worldnet.att.net>
Message-ID: <7sh842$572$1@bgtnsc03.worldnet.att.net>
Source record: 78606

Hi,

I have two HP-410C meters that I thought I would offer here before listing on eBay. For those who might not be familiar, the HP 410C is one of HP's enduring classics. Among it's other attributes, it measures AC with very good sensitivity up to 700MHz making it perfect for servicing BA (or any RF gear, actually). It is the meter specifically referred to in several Collins manuals.

Both units are relatively clean cosmetically but, like their owner, are showing their maturity. The front panel lettering is worn though still quite legible. Any other scratches or marks are superficial though and there are no dents or other serious flaws. They each include the HP 11036A AC probe and work perfectly.

The price is $150 each including very careful packing and shipping to any U.S. mainland address. That's a deal.

I have a third unit that is fully functional and of similar condition except that it does not have the AC probe, the front panel marking are more worn than the units mentioned above and the snap-in cap for the on-off switch is missing. These switches were used on many different HP pieces of the era and a replacement cap, which snaps in or out without the need for tools, should be easy to find. How 'bout $65 for this one including shipping?

Hi David,
I would agree with Dave on most of them, but C & D might be WW2 ARC-5 radio connectors, as I recall they tended to use banana pin connectors (those with four contact leaves that crossed over at the top of the pin and bulged out mid pin to make contact). Most of the later MIL spec connectors used solid pins and depended on the receptical end to have the flexure to maintain good contact.

Assuming the next question, where do you find mates? There in lies the challenge, if you are located in an area where there still are electronic surplus houses you might stand a chance of digging through a huge box of connectors. Bear in mind there are different shell sizes, pin counts, and to top it off different keying (slots or ridges)on the connector. The bottom line, its like "finding the needle in the hay stack".

Denis

Howdy,

New content is being added this week. Check out the SWL links, the DX news, or the Propagation Center.

I've moved the QSL and Callbook section off of the main page and onto a page dedicated to just this information. And I've added a lot more to this section.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

From: gadget <g_a_d_g_e_t@my-deja.com>
Message-ID: <7sgbqkcqu1@nnrp1.deja.com>
Source record: 78725

Hello,
I was wondering if anyone might have a power cord for a 1011D or C
lying about. I've got mine working but jumping the pins on the plug on
the radio, and then wiring the cord in, but I would like to get the
correct (female) socket for the power cord. Right now, I've got all the
pins taped over and it looks very bad. If anyone has either a complete
cord, or even just the female socket to mate with the male plug on the
rear of the radio, that would be great. Please let me know. Thanx!!

Not sure what you mean by "am garble".
Do you mean that it sounds like listening to SSB without the BFO on?

If so....
One thing I ran into on a KWM-2 was a leaky bypass cap on the plate
of the BFO tube. It drug the B+ down (on that tube) so I had low BFO
injection.

Hello,
I need one Collins 51J-4 mechanical filter for parts to fix my 1.4kHz filter...it has an open coil. If you have one laying around with at least one good coil (should be about 20 Ohms DC), I'll be glad to pay shipping costs. I think I can use any of the 51J-4 bandwidths to repair mine as they all have the same DC resistance and presumably the same coil bobbin.
Thanks & 73
Bob

From: Smith-Gaspard <w4ono@citrus.infi.net>
Message-ID: <37EB7420.A6EE6E28@citrus.infi.net>
Source record: 78732

Greetings ....

What you are describing is a "TG-34-A" Telegraph code learning system
that the U.S. Armed Forces contracted for use in teaching the
Continental International Telegraph Code. It is very well constructed
and
quite heavy. The A-F amplifier is powerful enough to connect multiple
headphones for a large class of telegraph students.

As a former U.S. Navy Radioman, I used this Keyer to teach telegraph
to new radioman strikers. By the way, the U.S.Navy starts teaching the
telegraph at 20 WPM .... not at low speeds. The unit utilizes a photo-
electric sensing system using paper tape reels for different modes of
instruction, such as five letter coded groups, plain language, numbers,
letter characters, et al.

I have one of these I have had for years that is un-used with a full case

of new paper reels contained in a wooden case.

As far as the value to the collecter it is unlimited .... meaning I have
seen
these on eBay without any paper reels sell from $32.00 to $200.00.

One unit sold for $380.00 with a full set of paper reels on eBay under
the catagory of "Science Instruments".

You can also use the unit to transmit telegraph for practice over the
air using the relay output connected to your transmitter key input.

I hope this helps answer some of your questions.

Source record: 78609

I want to build a transmitter based on the Heathkit DX-100 and need to lay my hands on the parts list and schematic and setup procedures etc. This is mainly for the practice as It's been a long time since I tackled such a project. If I can build a transmitter then I deserve a Ham License, RIGHT??? Any suggestions/help on this?

William

The following are for sale due to an impending move that will requires reducing the "basement boatanchor inventory". All prices are plus shipping.

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used and tested, good condition. Price $4 (4 lbs.)

Stancor P6308 filament transformer. Upright style 6.3 V@ 10 A. Used and tested, very good condition. Price $5 (6 lbs.)

Stancor P8190 filament transformer. Upright style 6.3 V@ 1.2 A, 5000 V insulation. Used and tested, very good condition. Price $3 (3 lbs.)

Isolation/Step Down Transformer

Stancor P-6383 - Primary is switch-selectable 210/230/250 V, secondary is 115 V. Rated 100 VA. Upright mounting, has built-in switch and 2 prong output socket. Can be reversed for step-up use. Used, tested, good condition. Price $5 (8 lbs.)

Filter Chokes

GE Filter Choke - 10 Hy @ 60 ma., 215 ohms, 1000 V insulation. Hermetically sealed upright mounting with lug terminals. Used, paint is chipped but in good electrical condition. Price $4 (4 lbs.)

UTC Filter Chokes - R-21, R-20, R-18, R-17. Characteristics unknown, fair condition. These are receiving type chokes, about 2 lbs. each. Asking $1 each, but will discount sharply to find them a good home.

Power Transformers

UTC R-8 - 115 VAC primary. Secondaries: 750 VCT @ ? mA, (estimate 150 mA), 6.3 V @ 4 A (tapped at 2.5 V), 2.5 V @ 10 A, 5 V @ 3A. Horizontal mounting, soldering lug connections. Fair condition. Price $3 (5 lbs.)

Thordarson 26R116 - 115 VAC primary. Secondaries: 540 VCT @ 300 mA, 6.3 V @ 10 A, 5 V @ 3.8A. NIB. Price $10 (6 lbs.)

Thordarson 26R128 - 115 VAC primary. Secondaries: 580 VCT @ 300 mA, 6.3 V @ 10 A, 5 V @ 3.8A. Very good condition. Price $8 (6 lbs.)

Thordarson 26R53 - 115 VAC primary. Secondaries: 536 VCT @ 260 mA, 6.3 V @ 8 A, 5 V @ 3A. NIB. Price $10 (6 lbs.)

Stancor PSR-70 - 115 VAC primary. Secondaries: 850 VCT @ 70 mA, 6.3 V @ 3 A, 5 V @ 2 A. Good condition. Price $4 (4 lbs.)

Freed PGP-3 - 115 VAC primary. Secondaries: 500 VCT @ 40 mA, 6.3 V @ 2 A, 6.3 V (tapped at 5 V) @ 2 A. Good condition. Price $4 (4 lbs.)

ARC-5 Parts (1 lb.)

Octal socket with snap ring
$0.25
3 section tuning capacitor for 190-550 kc. receiver (BC-453) $2.50
3 section tuning capacitor for 6-9.1 Mc. receiver (BC-455) $2.50
3 X .05 bypass capacitor $0.25
.006 paper capacitor $0.25
Receiver antenna trimmer capacitor $0.50
Receiver antenna connector $0.25
Transmitter oscillator padder capacitor $1.00
Transmitter oscillator tuning capacitor $2.00
Transmitter dial (specify 4-5.3, 5.3-7, 7-9.1) $0.50

Cardwell JP-48-GD - This is a split stator variable, 48 pF max. per section. 7 rotor and 6 stator plates per section, .070" spacing. Ceramic and micalex insulation, end plates are ceramic. 3" high, 2-1/4" wide, 6" deep, with 1/4" shaft extending 3/4" from one end. Used, good condition. Shipping weight 1 pound. $6.

Tubes - Tested good on I-177 or Hickock 6000 tester, unless noted. 1 lb. This is just a small sample, email with your needs.

NOTE: Quantity discounts on tubes: 5 or more, 10% discount. 10 or more, 20% discount. 20 or more, 30% discount.

Variable Capacitors (see also ARC-5 Parts)

HAMMARLUND "TC-450-BW" - Large air variable transmitting capacitor, 45-300 pf, .07" plate spacing. Frame is 4-1/2" wide, 3-1/2" high, 7" deep. 1/4" shaft, 1-1/2" long. Ceramic insulation, 24 rotor plates, 23 stator plates. Good condition. Price: $10 (3 lbs.)

TCS Receiver capacitor/dial assembly - 3 section capacitor with 4" dial and reduction drive (25 turns to cover range). 7" wide, 3-1/2" high, 3-1/2" deep. 1/4" shaft. Ceramic insulation, 2 sections 10-280 pf, 1 section 10-360 pf. Good condition. Price: $3 (4 lbs.)

JOHNSON 100R36 - Air variable capacitor, 10-100 pf, .07" plate spacing. 1-3/4" wide, 1-3/4" high, 4-1/2" deep. 1/4" shaft 1/2" long (front), 1/4" long (rear). Can be ganged. Ceramic insulation. NOS in original box, mint condition. Price: $8 each (2 lbs. each) (have 2)

Connectors, Adapters and Tube Sockets (just a sampling) Shpg. wts. 1 lb.

9 pin "octal type" connectors - look like octal but they're not! Used on some E.F.Johnson gear. Fit Amphenol "RS" mounting rings and cable bells.
One matched pair male/female (pins 6 and 8 missing) $1, one socket (female) with all 9 pins, $1. Includes your choice of chassis mounting plate and spring
or cable bell (specify) Used, good condition.

AMPHENOL 83-22SP connectors - look just like UHF, but have TWO pins, plus outer shield. Used with RG-22/U dual coax. Have 2 chassis mount female and 1 cable mount male. Unused NOS condition. Price: $1 each or $2 for all 3

AMPHENOL "Series 75" Microphone Connectors - Used on vintage gear such as Viking 2. 1 conductor and outer shield.

Type Description Quantity Price Quantity Price
PC1M Male, chassis mount 4 (New) $0.50 6 (Used) $0.25
MC1F Female, cable mount 6 (New) $0.50 4 (Used) $0.25

BNC Connectors - All are used, price $0.50 each

Type Description Qty.
UG-88-U Male, cable mount 5
UG-260-U Male, cable mount 3
UG-1094-U Female, chassis mount 15
UG-290-U Female, chassis mount 9

Amphenol "Series 75" Microphone to 1/4" Adapter - Adapts female MC1F plug to female 1/4" phone jack. (adapter is male PC1M and male 1/4" phone). For adapting mikes with MC1F to rigs with phone jack mike input. Price: $0.50 each

UHF to RCA Phono Adapter - Adapts male UHF plug (PL-259) to female RCA phono jack. (adapter is female UHF and male RCA). Perfect for Heath rigs like HW-101 which have RCA phono antenna connector. Silver plated, good condition. Specify long (1/2") or short (1/4") center pin. Price: $0.50 each (4 long, 7 short)

Rack Panels - Steel

Special Panel - 19 X 8-3/4" Black Wrinkle $2 8 lbs
Has 15x4 hinged door in top 2/3 of panel. Fair to good condition a few small holes, some rust.

Meter mounting panel, 19 X 5-1/4" Black Wrinkle $3 4 Lbs.
Has 15x4 opening with recessed masonite panel with holes for four 3-1/2" meters and provisions for glass so that meters are in a window and protected from contact. Masonite panel easily replaced, glass not included, VGC.

Chassis Bases - Unused

Size

3947. CAM POSITIONING ON R-388? PLEASE HELP

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-25 00:00:00 UTC
From: orion <orion@otenet.gr>
Message-ID: <7si423$7vs$1@newssrv.otenet.gr>
Source record: 78618

Hello all!!!
I am a happy new owner of a R-388 in a wonderfull condition , but i thing that the rf cam position is misalligned.
Is anybody familiar of the adjusting of these cams?
the manual of the 51j4 that i have says that the cam tips should be opposite the little holes provided for allignment of the rf deck, but it does not specifies on which band and where the KC indicator should be to check this, left or right?
Please advise on this if u got a similar unit, or at least check and inform me on which band your 388 cams are opposite these little holes, on wich band and in which direction of the KC dial, left or right?
Thank U in advance for reading my long post and possible for an answer!!
(any help on the cam allignement of the IF deck will also be greately appreciated)

Hi, anyone know of any magazine articles on updating an older radio with a product detector or syncronous detector? Radios in mind are a SX-28 and a 51J-4.
Thanks
Bob

Hi,

Electric Radio issue 99 has a nice article on what you seek. The mod
uses a 6BE6 as a combined BFO and product detectro. This could be
easily adapted to your radio. If you don't want to use a minature
tube, an equivalent full size tube could be used. My SP600 had been
modified that way and works quite well on SSB.

From: "W. Worley" <worley@snowhill.com>
Message-ID: <37ECF587.114B@snowhill.com>
Source record: 78625

I have two mil surplus modulator units from APS-104 search radar (likely from B-52 bomber - 1950s/60s vintage). These were used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit) from southeast Alabama. 36330 zip. NOTE: Please REMOVE the "79" to leave "worley" in my email or call 334-347-5281.

3955. FS: QST Back Issues $1.00 each

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-25 00:00:00 UTC
From: Andrew <xandrew@tropicom.net>
Message-ID: <37ECE0EE.675F5AE9@tropicom.net>

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you
are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have remaining:

QST

[1992 through 1998 issues are $1.00 each - 1999 issues are $2.50 each]

1992 Jan Feb Mar April
1993 Jan Feb Apr May June July Aug Sept Oct Nov Dec
1994 Jan Feb Mar Apr May June July Aug Sept Oct Dec
1995 Jan - Dec
1996 Jan - Dec
1997 Jan - Dec
1998 Jan - Dec (May issue is missing page 73)
1999 Jan Feb Mar Apr May June July Sept Oct $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45

Message-ID: <37ed2e68_2@news.calweb.com>
Source record: 78631

For Sale: Collins 180U-2 HF antenna tuner, Manual type, with Collins directional watt meter 100/1000 forward and reverse. Both units mounted on a 19 inch rack panel (rear mount) Assembly includes two Coaxial antenna relays with interconnection cables. Good condition, knobs in good shape, average wear and tear. Believe it was part of the Collins KWT-6 system? Tuner probably good for a couple hundred watts, consists of roller coil and variable air caps and switch fixed caps. roller coil has counter knob unit like KWS-1.

$225 plus UPS from 95827. I will pick up the versapack fees.

Tnx for the read

Bob, KE6F

I've got a product detector design that uses an NE602 chip. The transformer
that you need is a Toko RMC 502-182. The Digi-Key part# is TK1305-ND.
Unfortunately, I don't have a scanner; otherwise, I would be able to send
the schematic file to you as a gif. I am not sure where you are located,
but e-mail me if you would like to pursue this option. I have been using
this design in my own radios for the last 3 years, and it works great!

It is important to bear in mind that a circuit which is good for one
receiver is bad for another, BC342 and BC348 are dissimilar in this
way, for some receivers a heptode (6SA7, 6BE6, 6BA7) will work, while
others require triode-hexode/heptode like 6K8 or ECH81/6AJ8, I have
drawn a suggested circuit (gif format) for AR88 which requires the
latter solution, a similiar circuit is planned to be tested in
SP-210/BC-779 using ECH35 or 6K8

it is two possibilities of which I prefer the first:
1. You replace the octal based tube with plug-in octal plug mounted
with a noval type socket with and extra components for minimum
rewiring under chassis

2. You change wiring inside the receiver, but it is more work to
restore it later.

These are definitely not M38999...coupling is all wrong. M38999 series
i & ii are bayonet coupling, series iii is a thick acme thread, and
series iv is breechlock.

A suggestion might be to find somebody who has a copy of the _Connector
Encyclopedia_. You'll need vol. 1 for circular connectors. A web
search for 'Edwards Publishing' in socal will get you to the
publisher...they're not cheap.

Older style M5106 & varients might be a place to start.

Periodic wish list follows:

Looking for:

(1) power supply for SP-200-LX receiver. WIll consider same with another rx if necessary.

(2) Type 810 tubes and type 807 tubes. NIB or NOS only.

(3) raw 10" standard but high end speaker, 4 ohms

(4) audio mixer, 4 to 6 channel. Prefer Collins, WE

(5) audio speech conditioner units (compressor, limiter, etc.) for AM rig

Thanks in advance for any leads,

73 DE NFMK AR

Source record: 78653

Have just acquired a TR-4CW with RIT. Unfortunately, the manual is from an older model. While operation of the RIT is likely to be straightforward, haven't turned it on yet, I'd like to know if there are any supplements or info available that describe the RIT feature and any other features that were included with the latest model TR-4.

Hello all this Thursday evening the Collins Collectors Assoc. will have an AM night in place of it's usual 75 meter net. Date Sept. 30th. 8 p.m. - 10 p.m. cdt
Freq. 3875 all are welcome. Net control W0NKL Jim in Kansas Dust off those AM rigs!! You don't have to be running Collins gear. I probably will check in mobile on my Icom 706. Or if I get home early be on my Motorola Micom S. So if these rigs are welcome anything is!! If you don't have AM equipment SSB checkins are allowed also. It's a great night to hear alot of Classic rigs and some modern stuff also. Please stop by and see us. 73's Larry WA9VRH

3986. Radio City Products Tube Tester Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-26 00:00:00 UTC
From: cartercook@aol.com
Message-ID: <19990926193920.08203.00001298@ng-fn1.aol.com>
Source record: 78657

I recently revived a 1940's Radio City Products Tube Tester. Included with the tester was an original mimeograph sheaf of operation instructions - no schematic, though. Using all the settings and features of this beast without an instruction sheet would be difficult, at best. It is definitely not intuitive. Anyhow, I've made clean hard copies of the manual and will be glad to share a copy with anyone who needs it. The instructions are good for models 802 and 803.

3987. Any Tips for Hiding Antennas?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-26 00:00:00 UTC
From: miamibaker@aol.com
Message-ID: <19990926195100.20844.00002488@ng-fh1.aol.com>
Source record: 78658

I am looking for suggestions for hiding antennas, or building inconspicuous antennas that don't stick out like a sore thumb. Any tips for disguising antennas? Building antennas that don't look like antennas? I know all about loading up stuff like rain gutters, et al, with tuners, so don't need to go there. I'm interested in true antennas that are either disguised, or built so they don't look like antennas. Need both HF and VHF. Ahhh, life in a world of home owner associations!

I really appreciate your help.

Source record: 78659

I found a manual for a Heath SB-10. This is the SSB adapter
for use with the Apache AM transmitter.

This manual appears to be new. It has no check marks in it,
and looks like it just came from Heath. Collector quality,
for sure. $25

I also have a few other Heath manuals available:
GR-2000 TV Set $ 10
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 5

All are in good shape.

Prices do not include shipping from Florida.

Thanks.

Hi Allen,
I use auto rubbing compound and a sheet of glass. Hold the wafer at opposite corners with 2 fingers as you make figure 8 patterns on the glass- rotate to the opposite 2 corners and repeat for the same number of rotations. Wash the wafer with soap and water and retest in the holder. I have successfully used this method to raise 8MHz fundamental crystals to 50.4 MHz in 6X osc/mults like Gonsets.

I would like to expand my listing of miltary National HRO variants. See http://www.io.com/~nielw/hro_modl.htm . I have an R-140/FSM-1 manual so already show information from it on my page.

As a starting point I'd be interested in getting a copy of the introduction/description section and the schematic from any other military HRO manuals. Of
course copy/mailing costs will be paid.

Also, for sets with coil serial numbers matching the set serial numbers the I would like the information from set name plate and the coil contact plates (ie. E7, E8, etc).

Email me if you would like to help.

4002. BC221 Frequency Meter Calibration

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-27 00:00:00 UTC
From: Dan Rae <rae4@ix.netcom.com>
Message-ID: <37EFFA1E.1EA2672F@ix.netcom.com>
Source record: 78550

There was some discussion recently about the Calibration of these fine old frequency meters.

I recently bought a 1942 vintage BC-221-Q at the local TRW swap meet and on firing it up, probably for the first time in a good fifty years, was not surprised to find that it would not pull on frequency with the front panel adjustment over the entire range of the trimmer. This was common to both the high and low ranges. On opening it up I could see that the tuning capacitor appeared to be corroded, and as a result the layer of oxide on the plates was increasing very slightly the capacity at maximum. A very very slight bending out of one of the outer two moving plates was enough to bring the thing back into calibration. Now the calibration on both bands is correct within 3 or 4 divisions out of 10 on the Calibrate control, close enough to be useable.

I'm not saying that this will work on all BC-221's but it is worth looking at if you have one that will not pull in on both ranges. I should perhaps include here the usual legal disclaimers, you try this at your own risk and so forth :-)

The inductors in mine seem to be remarkably stable some 57 years on, as is the crystal oscillator, which holds to within less than 1 Hertz, or should I say cycle, of my Rb standard. A fine testimonial to the Allen D. Cardwell Mfg. Co.

Message-ID: <um7i4QVC$GA.310@cpmsnbbsa05>
Source record: 78554

So he is left with the original problem.

For LF/HF I have used thin magnet wire (#24 to #30) with monofilament fishing line as the insulator. I have used a weighted arrow to shoot the fishing line over a tree (unroll lots on the ground so the arrow will make it over the tree) then tied the wire to the line, pull the wire up, then tie the line to a branch. Add an antenna tuner and you're in business. A ground rod or connection to an underground metal water pipe helps. This is very hard to spot.

One house I was at had a clothesline, unused for years. I replaced the white plastic covered rope with white stranded #14 from the local hardware store. Not bad.

For VHF/UHF you can make groundplane verticals out of #12 bare copper wire and these are pretty unobtrousive. I find it hardest to hide the coax, not the actual antenna.

Putting stuff in an attic works, too, especially when it is not raining (again, an antenna tuner helps).

You really have to look at your specific situation and figure out what you can get away with. If you want an antenna there's always a way (except if you want a 160m beam on a 200 foot tower).

I have a Gonset Super 12 tube shortwave converter for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=171238846

and the description is

This is a near-mint example of the venerable Gonset Super-12 Mobile shortwave converter. Runs on 12 VDC, and covers the 10, 11, 15, 19, 20, 40, 49, and 75 meter bands. Face is in nice condition showing the beautiful contrasting light blue and white dial, with a slight bit of checking on the chrome surround which will probably clean up ok. Uses a unique tuning method to provide gobs of bandspread for each band covered. This rare converter is especially nice in that it includes the 49 meter band, which is good for general SWLing. Used in conjunction with an AM radio, either fixed or mobile. Case has a couple of mounting holes that I don't think are original, but otherwise the radio is in excellent unmodified working condition. Uses tubes 12EK6 (2) , and 12EL6; comes with a spare 12EL6. Includes copy of documentation and antenna connecting cable.

Closes 10/3/99.

Thank-you.

Somewhere in "Hints and Kinks" or some other publication I read how to put the classic wrinkle finish on. I think it involved using Krylon spray paint and baking the items in an oven, but I cannot find the article to tell how long, or at what temperature.

I know special paint is available in some places to do this, but it is VERY EXPENSIVE!

Any info will be appreciated!!

Allen - I got very gud results using 3m brand "wetordry" sandpaper (used for wet sanding cars). basically what u do is wet the sandpaper (400 or 500 grit) and make so many figure 8's with the quartz on the sandpaper (say 10-15), then turn the piece of quartz 90 degrees and make the same number of figure 8's again, then check ur wrk with a oscillator and freq counter and see how much ur frequency has changed; repeat as necessary. use a piece of glass for a work surface to lay the sandpaper on, and to avoid leaving ur bloody fingerprints on the sandpaper, wear one of those "rubber thumbs" that clerks use for sorting papers, etc on ur "grinding finger"...it gives u a pretty gud grip on the crystal material and also keeps ur fingertips intact....there was a pretty gud article that explained this procedure in "Electric Radio" magazine a few years back, but i no longer have the article here...mebbe sumone out there can help with that info...Jay N3DQU.

There's a technique posted at: http://www.tubesandmore.com/wrinkle.html.
Cant see it working though. whenever we wanted a wrinkle or vinyl top
finish to our cars, we would paint the car top with spray paint and then
when tacky, drive down the road at 60. Kinda hard to do that with a radio.
Who holds the radio out the window and who drives? :-)

Source record: 78676

I have a spare RACAL TA940-B 100 Watt Linear Amplifier. This amplifier is used with the TRA 906/921/931 Squadcal and Syncal-30 HF manpack sets. The amplifier is very compact and has two input modes, 200 Millie-Watt fixed or 1 to 5 Watt adjustable. DC input is 28 volt. The technical manual is included.

I m interested in trading. If I cant find anything interesting I then will sell the amplifier.
I am looking for Larkspur equipment mainly manpack sets like the A14-HP HF tranceiver, B70 and MR343. Also looking for the A510 ancillaries (have a spare TX unit should anybody be interested).
If you have any other equipment I would also be interested.

Hokay, time for my bi-annual post on wrinkle painting, I guess:

****

I see lots of good suggestions on where to get paint, but no one seems to have answered the basic question. I do a fair amount of this type of work, all of it with spray cans, and there is definitely a difference between the paints available. The "valve cover" paint works well for touching up with a small brush and heat lamp, but is not as forgiving on large surfaces - it tends to "pattern", which is to say it demands an absolutely even film thickness across the panel if you don't want areas of different wrinkle patterns. Ditto the colors other than black that I've tried. The only formulation I've ever used that is more forgiving on larger surfaces is the black ruf-coat wrinkle "varnish" from General Cement, part number 10-6012. Perhaps surprisingly, it doesn't do as well for touchup as the automotive kind, which is why I keep both around. If you have the wherewithal to purchase the black wrinkle paint in bulk and can use a professional automotive sprayer, that is obviously the way to go. Not that colors other than black are even more demanding of thickness uniformity, so don't be disappointed if it doesn't come out well using a spray can the first time.

Technique - it is absolutely mandatory to either have hot sun or a heat lamp...I use both! I've tried the hair dryer technique, and it's great if you're interested in forming puddles of varying thicknesses! :-) Temperature needs to be above 80 degrees at the film surface, but not over about 120 degrees...higher temperatures produce a flat black oxidation on what should be glistening finished wrinkles. Spray a "slightly thicker" coat than you would use on a normal paint, let it set for 3 minutes (time it!), then spray a second coat. The more even the film thickness, the more even the wrinkle pattern - therein lies the art. You'll have to reach your own conclusions on what "slightly thicker" is - it's an experience sort of thing. The thicker the coats, the more chance you have for larger wrinkles (and strange mottling). Keep the heat up until it has completed the wrinkling process...it will take more heat in the thicker areas, which is what the heat lamp is for - use it like a spotlight to warm the areas which have not wrinkled from the sun's action. Total time to a nice wrinkle finish should be about half an hour. It IS possible to use the heat lamp alone - just

don't get it closer than about 8", and keep it moving. Then leave the painted panel for six months. (Just kidding, but it does need several weeks to harden to a reasonable degree.)

The surface has to be horizontal when you paint it, unless you have a rotating fixture that will spin the part at about 10 RPM or so. If the corners of the cabinet are art deco rounded like the prewar Hallicrafters receivers, this is the only way to get an even coat without sagging. If the corners are square, then it will come out fine just painting one surface at a time, each in a horizontal plane.

Perhaps more than you wanted to know...

I have a kenwood station moneter sm-220 in grate condition I would like to trade or sell. It is in grate condition and is set up for the ts-940 with the PAN adapter for that radio. I want to trade it for a radio like the ts-820 or 520 or something like those radios something with tube finals. I will add cash if needed. I will sell the scope for $250+shipping but would rather trade. if you are interested email direct to racerjm3@aol.com

I would add that I was originally advised and have confirmed that pre-heating the work will help set the paint better. The warm/hot surface helps to dissipate the volatile and the paint will have less tendency to run (allowing one to better build-up the paint thickness). Been working for 30 years!

I dont' suppose anyone has a

Muirhead D-669 wave analyzer schematic?

This is a nice piece of old (60's) English engineering.

It works, but something is a bit off as it goes into slow oscillations
if I turn up the "Q" just a teensy bit.

I've replaced most of the old leaky capacitors.

Thanks,

George

Whenever you need a manual for an older piece of ham gear, you should
check with the BoatAnchor Manual Archive (BAMA) at http://bama.sbc.edu
Your Pacemaker manual is there and awaits you to download it. If you
are not happy with the quality of the printout, there are many who
will sell you a photocopy.

4055. xtal grinding tips

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-28 00:00:00 UTC
From: bjk@ihug.co.NZ
Message-ID: <199909281929.HAA06830@smtp2.ihug.co.nz>
Source record: 78576

After grinding the xtal a bit, one can get an approximate estimate of frequency and activity by putting the bit of quartz inside teh coil of a gdo and tuning for dip.

Most xtals will oscillate if substituted for coil in gdo (may need an adapter to take particular xtal mount). Tune to hf (low capacity) end. GDO reading will show activity level, freq can be checked by calibrated receiver.
happy grinding!

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Kenwood TS440SAT 80-10 Transceiver, with internal automatic antenna tuner, SSB and Narrow CW filters, computer interface chips, broadband transmit enabled, hand mic, power cable, SP-430 speaker (upgraded), and includes perfect original Operations AND Service manuals. This is the sweetest little rig you're likely to use, and has regularly earned outstanding signal-quality reports. Full output, 100% operational. Cabinet is free of damage, with only very slight wear around the front outer edges. Super receive audio, too, typical of Kenwoods. $750 or BRO, worth every penny.

Kenwood TH79A Dual-band HT, 2m plus 440, 5 watts out. This is ABSOLUTELY like new, less than 1 hour use. Comes with new original high-output battery (PB34), plus new additional NIMH PB33 style battery, Kenwood 2-slot KSC-14 fast charger, MFJ lapel speaker/mic, soft case (new), original box and manual. I paid over $550 for it recently, will sacrifice for $350. Check with your local toy store; the options ALONE are worth almost that much.

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and original box: $175. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. Just back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $155 or BRO.

Heath SB610 Station Monitor, clean, fully operational, well built. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $110, includes manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

InfoTech M200F RTTY/CW Terminal Unit. This is from a day gone by, but it still kicks butt for RTTY/CW when compared with any of the newer "better" multi-mode units. It requires an external composite video monitor, works really great. Looks and acts new, includes manual and cable. $125 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS.

Thanks, and I look forward to hearing from you!

OK it is all tubes so I think it qualifies as a BA as much as any Drake !
The question is the one I just picked up (sans manual) powers up but does
not work. There is an 8 pin "accessory" jack on the back, but no plug.
Someone has said that there are several jumpers needed in that plug. Anyone
have a manual and can share that information with me.
Thanks and 73

You are taking a safe approach. I used acid that you had to keep in plastic because it would etch glass. This was some 40 years ago and I had to buy the material in large quantity from a chemical supply company. I always worried about keeping it in a safe place and proper disposal.

I think that people are also realizing that audio DSP has it's limitations
and that rigs with built-in IF DSP are far superior and will ultimately
provide capabilities that cannot be performed with audio filtering.
Brian Denley

They must see things for sale here I miss.

I honestly can't see where the newsgroup prices average that much less than the Ebay prices. The odd exception is scarfed up in seconds.

You could make more money delivering pizza than reselling ham gear off the newsgroups onto Ebay.

The newsgroup is great for a part, or for help and info. I appreciate that and that's the way it should be.

Just my thoughts, probably not worth much.

I am not against some guy selling odds and ends a rig here and there.
However when the man in the trenchcoat show's up early at a hamfest and buys
up everything, parts out working radios, stations, manuals, filters, spams
40+ posts a week then repeats them 3 hrs before ending (like one Long Island
guy spamming this NG) thats ethically questionable.
This type of character is killing other peoples fun and love for a hobby.
There is a difference between capitalism and greed.

Sorry, don't have a manual, but waaaay back in mid 60's I had
an RME 4350 as my main rx. Loved it. Had matching external
preselector and SSB adaptor (allowed _switchable_ LSB/USB and
did great synchronous AM/DSB). Anyone who had one will tell you that
the planetary tuning mechanism tended to be it's main shortcoming.
When it was new and worked well, it was smooth as butter. After some
use, the internal parts wore unevenly and there would be mechanical
dead spots- turn the outer dial and no tuning change, then it catches
up and jumps a bit. I recall at the time that parts kits were available
from the manufacturer to smooth things out a bit.
Good Luck. 73.

It's interesting to note how this newsgroup is becoming a vehicle (by a few guys) as a source for locating and buying "boatanchors" on an ongoing basis, so they can "flip" them over onto eBay, and resell them for a (often very nice) profit.

Sure don't remember ham radio being like that years ago when this was a hobby. Perhaps the "good 'ole days" are now gone; the days when hams would actually HELP other hams and those interested in entering and enjoying the hobby. Heck, I even recall when a local ham (who helped me study for and pass my Novice license) actually GAVE me my very first ham transmitter back in the early 1960's! Lucky for me, he didn't tell me to go bid for a transmitter on eBay (which wasn't around then). Nor did he advertise for and buy a transmitter, with the idea in mind of selling it so he could make a nice profit off of it. His interest was solely in promoting the hobby, helping others to enter and enjoy the hobby he so enjoyed.

Apprently we all view the hobby of ham radio from differing perspectives. The perspective of "how much profit can I make flipping ham gear onto eBay?" just never crossed my mind.

Should it?

Hello everyone,

Still looking for these parts for my SP-600 JX-14:

Original manual:

Crystal position control knob (Knurled metal)
(upper right hand corner near the little chart)

Ball-end toggle switches (5 involved)

Equipment model name plate for R274 (52 mfg) about 1" x 3-3.5"
Or any close cousin which will baffle and mystify the archeologists.

Any cabinet style "Hammarlund" nameplate

Top and bottom mu metal covers

VFO cut in switch and feed through
(From the back of the xtal switch over to the VFO
there is a switch on top of the VFO which is thrown
in when that position is asked for: I need that switch)

VFO

Tube shields (IERC preferred)

Tube hold down hat clips and posts (power supply tube hardware)

Flare cup washers for the
OEM Hammarlund military rack handles

Also looking for an outboard power supply for the SP-200-LX

Thanks in advance for any leads.

Dear Fellow Hams;
I have placed this item on Ebay and would appreachiate it if you can check it out, maybe you can use it.
It is a 1950's Astatic D-104 with a Call Sign Plate above it and only at $20.00 so far with 3 days left to go!
Here is the URL with pictures>>
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=170741545

[snip]

Well, I'm not a sailor. In fact, I used to get sick riding on the merry-go-around when I was a kid. One time, though, I did have to take a trip out onto Lake Michigan.

I developed some new alignment/test procedures for the Heath MI-2900 (and above) series depth sounders (the ones with the rotary displays--not the digitals). I wrote them up and--to verify that that a unit tuned to those procedures would work to specifications--Jerry Van Vleet (my boss's boss's boss (my great-grandboss)) took me out onto the Lake to test it. It worked as documented.

Anyway, none of the above has anything to do with vacuum-tube Ham radios. Not even the neon bulb in the display had a vacuum. It couldn't be used has a boatanchor because it was too light and the transducer cable wasn't long enough to reach the lake floor 50 feet below us.

Anyway, that didn't occur to us. We decided to head back. Jerry turned the boat around and started back in. The motor died and wouldn't start. Luckily, the boat was a rowboat. Even more luckily for me, Jerry did the rowing because I was turning green around the gills.

Okay. So my followup post is off-topic for this group. But I at least know it is. (On the other hand, maybe that's the real sin.)

--Bill (who's trying to think of a situation where one would test an hw-101 (for example) in a beat-up rowboat with a flakey motor. certainly not to impede progress back towards shore!)

Many of us learned from older hams, Ben. Our "Elmers". Many of us, in turn, became "Elmers". We shared what we felt was the most wonderful hobby in the world. Our motives were unselfish, certainly not centered around "profitability". Many of us *gave* equipment to others to facilitate their entry into this hobby.

Altho I realize there are still MANY "Elmers", many hams who share of themselves and their hobby unselfishly, seeing what's going on in this newsgroup with several of the "regulars" here who continually "flip boatanchors" from this newsgroup onto eBay...seeing their obviously deceptive tactics (such as using different User-ID's and even different IP's to "disguise" themselves as a buyer one day, an eBay seller the next), selling gear via eBay that's often misrepresented and more often sold at ridiculously inflated prices...just makes me wonder, Ben. Is this our hobby? Is this what it's become?

Have to wonder if others here view this situation similarly?

I picked this receiver up the other day from a guy. It is a model # 4350. I am guessing about 1940ish. The radio is complete and in very good shape. Does anyone have a manual for this radio; a photocopy would be nice. I have not decided what to do with it yet. If I were to sell it what would be a ball park figure for it? Thanks for the read! Jon.

Bill--

Well said. I would not be in the hobby today if it weren't for my "elmers" through the years. I still have a lot of stuff they gave me to get started, and recently have found myself passing it on to new hams to get them started. I could probably e-bay the stuff for a tidy profit, but I don't think it would be keeping in the spirit of why it was given to me in the first place. As anywhere, there will always be those driven by profit rather than the spirit of the hobby. As one of my Elmers would have said, "That's my opinion, and you are stuck with it."

Hi all,

I have an old Tektronix 453 oscilloscope that has a bad HV power supply,
and I suspect that the transformer may be the problem.

If anyone has a spare HV/flyback transformer for the Tek 453 that they
would be willing to sell, please let me know.

E-mail me at:

dbutter@wireless.net

Thanks in advance!

Keep in mind that on eBay the buyer sets the price, not the seller. The term "inflated prices" defies all rules of economics. If a ham gave a radio to a new ham for free, would that be the "right price"? Also, a great number of the eBay sellers aren't even hams, no less Elmers. Lastly, how do you feel about AES and HRO, etc. buying and then selling radios for a profit?

Hello Gary,

I'm not sure if you mean 600-700 volts total secondary, center tapped, or 600-700 volts each side of center tap. I've got both - here's a list. All prices are asking prices - let's make a deal. Quantity discounts, too. Prices do not include shipping from 19082:

Stancor P-? (label does not have a part number). - 115 VAC primary. Secondaries: 375-0-375 V @ 205 mA, 6.3 V @ 5.6 A, 5 V @ 3 A, 5 V @ 2 A. NOS, very good condition, flush mounting. Price $10 (10 lbs.)

Stancor P-8161 - 115 VAC primary. Secondaries: 365-0-365 V @ 230 mA, 6.3 V @ 9 A, 5 V @ 3 A, 5 V @ 2 A. Used, good condition, flush mounting. Price $10 (15 lbs.)

Stancor PCR-300 - 115 VAC primary. Secondaries: 550-370-75-0-75-370-550 V @ 300 mA, 6.3 V @ 5 A, 6.3 V @ 1 A, 5 V @ 6 A. Used, good condition. Upright mounting. Price $10 (18 lbs.)

Stancor PC-8414 - 115 VAC primary. Secondaries: 600-0-600 V @ 200 mA, 6.3 V @ 3 A, 6.3 V @ 3 A, 5 V @ 3A. Used, good condition, upright mounting. Price $10 (10 lbs.)

UTC S-41 - 115 VAC primary. Secondaries: 600-0-600 V @ 200 mA, 6.3 V @ 2 A, 7.5 V @ 3 A, 5 V @ 3A. Used, good condition, upright mounting. Price $10 (10 lbs.)

Hope this helps. I am moving shortly, and have to reduce "inventory".

Hi
In reply to yours, please note the days of real ham radio still exists in most parts of the country. If you get on AM phone, you will meet a great bunch of guys. Usually around 3880 or 3885kcs, I have received a transmitter gratis. I have given away two rigs gratis. Also made a few trades, no money involved. Also received a few unexpected presents of parts I needed (just showed up in the mail). So ham radio as you knew it still exists - just you have to go looking for it now.
I suggest looking for AM phone contacts and local AM groups in your area and listen around 7038kcs on cw for the bug operators. These are the groups that not necessarily go for the profit. Now, with all due respect to Ebay, I have and continue to sell lots of my surplus items on Ebay - cause it's fun and I'm learning how to take digital pictures and upload items, etc. So, the old school is still around. Also the new school just ain't that bad. I guess balance is the aim point.
God bless.
Steve

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Kenwood TS440SAT HF Transceiver, with internal automatic antenna tuner, SSB and Narrow CW filters, computer interface chips, broadband transmit enabled, hand mic, power cable, SP-430 speaker (upgraded), and includes perfect original Operations AND Service manuals. This is the sweetest little rig you're likely to use, and has regularly earned outstanding signal-quality reports. Full output, 100% operational. Cabinet is free of damage, with only very slight wear around the front outer edges. Super receive audio, too, typical of Kenwoods. New Lower Price: $650 or BRO, worth every penny.

Kenwood TH79A Dual-band HT: Sold!

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and original box: $175. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. The rotor is ust back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $155 or BRO.

Heath SB610 Station Monitor, clean, fully operational, well built. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $110, includes manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

InfoTech M200F RTTY/CW Terminal Unit. This is from a day gone by, but it still kicks butt for RTTY/CW when compared with any of the newer "better" multi-mode units. Works with your PC or an external composite video monitor. Looks and acts new, includes manual and cable. $125 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS. I'll split the shipping with you.

Thanks, and I look forward to hearing from you!

Because, as good as those models are, the DSP-599ZX is *so* much
better! I have one and I would not consider selling it. :-)
I also use it as a RTTY modem and it works great in that mode, too.
Also, a lot of hams dump them when they move up to a new rig
with built-in DSP. 73, David K3KY

I'd like to give my point of view on this as one who is presently
selling a perfectly good DSP 59+, having replaced it with the 599zx.

It's strictly economics versus features; I bought the 59+ not knowing
what I'd do with it. It works super on Voice and on CW, and gives a
credible performance on Data. Where it "falls down" is switching from
mode to mode. In a word, frankly, it's laborious. You've got to
twist knobs, and push several buttons to go, say, from Voice to Data.
Once you're there, however, it's great.

The 599zx, on the other hand, remembers whole combinations of
settings, and you can click from one to another with a single button
push.

So, it's up to the buyer. If you're constantly switching back and
forth between RTTY, Voice, Packet, etc, then you'll probably get a
cramp from the 59+.

If on the other hand you want to save a hundred or two, and the above
limitation doesn't bother you, then the 59+ is super.

Jus my 2 cents.

Neil

P.S. My 59+ is STILL available, make me an offer:

4107. Need Manual for Tektronic 546 O'scope

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-29 00:00:00 UTC
From: misheb@execpc.com
Message-ID: <37f2421b$0$7744@news.execpc.com>
Source record: 78522

Looking for original of copy of 546
user's and or service manual. Have
tried Tannenbaum, W7FG, and the Manual
Man with no luck. Any assistance would
be appreciated. Just picked up a very
nice 546 at very low ham fest price
(price related to the desire of the
owner to NOT have to haul it home - its
heavy!).

Hi, I recently picked up a hro-60 that calls for a 4h4 ballast tube.
There was a 6v6 in the socket instead. Does anyone know where I could
buy a 4h4c ballast tube, and is there a possible sub to use instead.
I've tried looking on the net but can't find a listing.

Thanks, Jeff

4112. Flipping Items Here to Ebay--A Story

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-29 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19990929154742.02259.00000155@ng-ff1.aol.com>
Source record: 78527

What's up with our fellow Amateur "stealing" items only to be sold for Big Bucks at the auction frenzy? Well, everything old is new again!

I got into ham radio 30 years ago. At that time, Hamfests were exciting places. I remember there was an old guy who travelled from fest to fest toting a big trailer of goodies behind his station-wagon. He was old and shriveled -- looked like an evil elf. He would get to the fest early. He'd buy everything in sight that could be "talked down" in price. Magically, it would re-appear on his trailer marked up several hundred percent. The old elf had bad pipes...he could only whisper. He looked and sounded like he was crippled or disabled. Many unsuspecting hams would give the poor guy a very good deal....feeling sorry for him.

So, here we are some 30 years later....complaining about the same thing. Somehow, we still have a feeling that ham radio is sacred and everyone we contact is a trusted friend. Bunk. It wasn't true then...it ain't true now. Bartering, selling reselling have been a part of ham radio (and human life) since it's inception. Let the buyer and seller beware.

Was this in the midwest (Chicagoland area)? If so, I believe I recall
the same guy you're referring to...used to see him years ago at the
Hamfesters Radio Club hamfests...way before eBay was even around! <g>

> So, here we are some 30 years later....complaining about the same thing.
> Somehow, we still have a feeling that ham radio is sacred and everyone

> true now.

Apparently not.
There once was almost a sense of "brotherhood", or "fraternity" amongst hams.
Apparently times and "values" have changed. Thankfully, not everyone's been
so affected.

> Bartering, selling reselling have been a part of ham radio (and human
> life) since it's inception. Let the buyer and seller beware.

Yep, "Caveat Emptor".
More than a few of us buy gear and actually USE it before we decide to
resell it. Some even fix it, modify it, restore it, etc. Many of us
actually ENJOY the gear before we decide for one reason or another to
part with it. There are so many aspects to boatanchors and ham radio.
"Flipping it onto eBay" appears to be yet another aspect of ham radio,
at least for some, and it's certainly their right to do so. Whether it
"furthers the hobby", in any sense of the term, I believe is debateable.

Just one ham's opinion, FWIW.

73,

-bill

All it tells me is that many newer rigs have DSP built in and so a lot of the guys that had the money to go out and buy these units when they hit the market are now upgrading to newer rigs with built-in DSP and selling off the old rigs and filters.

Doug

Conversely, there are "hams" on this list who seem to make
a comfortable living scouring hamfests and then hawking stuff
on Ebay. This is a free country, but they'll not get copies of
manuals, parts , or other freebies from me when they choose to make
a business out of this hobby.
.02 and worth it!

Source record: 78540

Well, let me put on my model railroading cap......

Not sure how this will work with "rub ons"

There is a liquid product used in modeling that allows the decal to "conform" to rough surfaces like scale rivets or lines on a model plane or train. I can not find a handy catalog to look it up, but it has a "trick" name like desolv-a-coat or some such thing. You put a little on the panel, use some to lift the decal from the paper, and then put a little more on after the decal initially dries. The decal conforms to the surface, it chases out airbubbles and any glue, and makes the decal backing disappear. Have never tried it on wrinkle surface radio gear, but it works like gangbusters on trains and planes!

Cheers! Dave

4133. HELP!! Police motorcycle radio needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-09-30 00:00:00 UTC
From: Mark Masa <mark@kelltech.com>
Message-ID: <37F3C5E3.69E33EAE@kelltech.com>
Source record: 78397

I'm restoring a 1952 Harley Davidson police motorcycle and the only thing that I'm missing is the radio setup. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading material with the few other people in the country who are into this sort of thing. Specifically, I think what is correct for my bike is a Motorola FM TRU41. It is two boxes about 18" long x 10" wide x 10" high. (these dimensions are approximate) The receiver was in one box and the transmitter was in the other. The power supply was in one of the boxes also, but I'm not sure which one. There are interconnecting cables between the two boxes as well as a cable that went up to the control head mounted on the handlebars. The mic came from one of the boxes and was mounted on the tank. It is a tube radio. This is the one I need for my bike but am interested in ANY ANY ANY ANY pre 1970 motorcycle radio, especially if it has tubes. I hope somebody can help me.
Regards
Mark (mark@kelltech.com)

Because ebay advises members to post such teasers, after all, the more an auction is advertised the more ebay stands to profit also. Since it is EBAY MEMBERS who are posting such teaser ads, ebay could take some responsibility and suspend ebay members who continually abuse Usenet newsgroups by posting ebay teaser ads to discussion groups.

I've bought and sold about a dozen items on eBay and they've never advised me to post a teaser anywhere else. Even if they did, suppose they told someone to jump off the roof?

Source record: 78400

What exactly do you want to know. The FRR-23 (or SRR-13) is a 2-32 MHz receiver mfg by RCA for the Navy. It runs on 115VAC 50-60Hz or 400 Hz, and uses subminiature tubes mounted in dinky modules. The audio output xformer always goes bad... sooner or later! The rx uses a tape-type dial (similar to the Racal RA-17). They're an "OK" receiver. Try W7FG manuals (on the net), he may have manual copies to sell. I have the set, but its too big to copy. FYI, however, the manual is NAVSHIPS 92211, BuShips - 26 April 1954, w/ Change 1 dated January 1957. Hope that sheds some light for you.

Actually they do. When you submit an item, on the 'Auction has begun!'
page, it is the line right under the URL for your ad page. Most folks
probably over look it since they are eager to check out their newly
created ad. You can see it on the example page:

http://pages.ebay.com/help/basics/nut-selling3.html

Hey, I enjoy eBay. I've bought and sold many items there (not the same
items though!) with good results. I do not post my ads in the
newsgroups but I don't get bent out of shape over those that do.

One dude's opinion...

And notice they say nothing about posting only to groups that allow ads
or only to .markeplace or .swap groups. It just "advertise your item on
bulletin boards or newsgroups." Irresponsible on their part.

When you're at the hamfest and negotiating a deal, is it OK to slam the boat anchor in your hand against the side of the head of the guy who jumps in and says "I'll take it" while you are still negotiating?

What about the guy that insists that you name a price for the BA you are selling and then bitches when he can't steal it.

Sure, we all like a deal, but berating the sellers over their choice to sell by auction, or for best offer, or who prefer a swap, shows a real lack of class.

As for prices...
I've had no problem finding deals on stuff I'm genuinely interested in and make good deals when I find someone genuinely interested in what I am selling, often times well below the amount qouted to the pushy guy who wants it for resale and is unwilling to take the time to visit over the deal. After all, the main reason for swapping gear is to share the pleasure and collect enough jack to enjoy another piece of gear from the next table. This works on the auctions too. How many times do you think those high bids actually represent $ changing hands. Sometimes it's a high bid to win and then a friendly radio swap between two guys who met at the auction.

For "Rich" & "Joel", et al, I have a solution:
Just imagine the following ad.......

++++++++++++++++++++++++++++

Hi gang;

I just picked up a a Collins Thingamajig in aboluute mint condition.
Before I list it on eBay next week, would anybody want to make a good
reasonable offer?

de w2xxx (62) "Keep those Filaments Lit"

++++++++++++++++++++++++++++++

Since I always wanted a genuine Collins Thingamajig, I'd undoubtedly
make the best possible offer I could. If it's not good enough, the rig
could go on eBay, with no need for furthur "teaser" ads, since everyone
has already had a shot at it.

Most folks are slow to take hints, and it will probably never
happen....but I can dream, can't I ????

Tnx fer the read,

Plum

Dick,
This SWAN monobanders use 6DQ5 single for final, about 100W output and use external power supply similar to 117X series used on later SW350. It uses 4 pole crystal filters using discrete crystals and balanced modulator is famous but expensive 7360 tube. It is quite good radio considering it's age but lack of S meter(it uses large nice looking plate current meter not used for S meter) and one band does not excite many users.

Jeff:

That 6V6 is the standard "fix" for a bad 4H4 current regulator tube.
This substitution is recommended on page 24 of the HRO-60 owners manual.
A replacement 4H4 will cost more than you will want to pay. I believe
Amperite still sells them but for something around $100 or more. The
4H4 was a short-lived tube anyway and the benefits in performance are
questionable. I have been running a 6V6 in my HRO-60 for about 10 years
now and the set works fine.

the 6V6 works fine as the old voltage problems of the past are not such an issue anymore. You can maybe find a 4h4 but it is not likely and they are big bucks if you do. Check the current requirements for the tube or circuit that it is used for and then sub some car lightbulbs and a resistor or two to match. A friend built one for me in my NC-300 and it is fine. Or just use the filament in the 6V6.. It really does not matter... 73's p

"Joel Levine" <joelbmh@worldnet.att.net> wrote:

> Can someone tell me when capitalism was outlawed in this country?

Outlawed? Never, Joel. Hopefully never will be, either.
There is a difference between "capitalism" and "greed", tho.
Seeing this newsgroup repeatedly used (by a *FEW* hams) who
solicit for gear for the purpose of "flipping" it onto eBay
to make a buck...the same few who feel compelled to "inform"
us repeatedly that there's a nice "so-and-so rig on eBay,
check it out before it's gone"...then remind us "there's
only 3 hours left"...then remind us there's "only 2 hours
left" ... is ridiculous. I hope you get my point.

It doesn't take much effort or intelligence to find out
for onesself what's available on eBay...search engines
make it quite simple and efficient.

Also doesn't take much to realize what's going on when
a guy uses different User-ID's and different IP's here,
depending upon whether he's looking to buy or to sell,
or to advertise "flipped gear" that came from here the
other day, and is now on eBay (only for the next hour!).
Of course, on eBay it's listed under yet a different
User-ID. We wouldn't want anyone to know who we really
are, would we, when we just "flipped" their gear? And
they'll probably never even recognize their gear being
resold on eBay...at least not from the "embellished"
(Madison Avenue) descriptions we gave it!

With a "reserve" considerably more than you sold your
gear to the reseller for....my, if only you had known!
Next time, you'll just list it on eBay...why bother
with this newsgroup...why bother trying to sell it to
a fellow ham who might actually USE and ENJOY the gear?
Afterall, you can realize greater profits repeatedly
"flipping" ham gear over to eBay than you could make
delivering pizzas! <g>

Not to belabor the point, Joel, but do you honestly
believe THIS is what ham radio is all about? Profit?
If your answer happens to be "yes", then I guess we
won't be doing any buying or selling here or elsewhere.

I don't feel such consistent actions are what ham radio
is about, nor do they further the hobby in any manner.
I feel they're plain and simple *greed*.

Just one ham's opinion.

73,

-bill

Source record: 78473

Hello,

I have for sale seven (7) Millen 74001 Shielded Slug Tuned Coil Forms. These are the ones that fit an octal socket, with the slug tuning screw extending down through the key of the form. Insulation is polystyrene and mica filled bakelite, with removable round aluminum shield. Used in the "8 Tube Amateur Band Superhet" that was in the ARRL Handbook in the late 1940s.

They are in excellent, unused condition. Six are in the original boxes, while the seventh has no box. Have the original instruction sheet, which gives tuning range for various suggested windings.

I'm asking $5 each or $30 for all 7, plus shipping from 19082. (They don't weigh much).

Source record: 78474

Today Rutgers University will be celebrating their 10th year anniversary of WINLAB (Wireless Information Network Laboratory). It coincides with the 100th anniversary of Marconi's activities at the Twin Lights lighthouse in Highlands NJ where he was reporting the Americas Cup Races between the ship Ponce and his setup at Twin Lights. Rutgers is having a combined celebration for the events. I will be demonstrating a rotary spark gap station based on Marconi equipment at Twin Lights between 4 and 6 PM. After, at dinner, I will be demonstrating a commercial coherer receiver and a Ruhmkorff coil transmitter. We will also have a special events ham station operating from Twin Lights almost all day using the call WA2GM. The call of our local QCWA chapter, known as the "Marconi Chapter" of which I am president. We will also have special events stations operating from Twin Lights and Camp Evans during the month of October. Info on that can be found in QST and other ham publications. If you want to see a photo of the spark equipment I will be demonstrating go to the following URL:

http://www.monmouth.com/~n4fs/spark.jpg

When keyed the transmitter lights a 100 watt bulb on the secondary of the oscillation transformer to full brilliance and the noise and the brightness of the spark from the rotary gap is enough to drive one out of the room. But that smell of ozone is great. 73 - Mike

Forward ebay teaser ads with a complaint to:

safeharbor@ebay.com and cc support@ebay.com, founder@ebay.com

If ebay users are going to abuse discussion groups by posting their ads
then make life a little more difficult for ebay by forwarding all the
teasers back to them.

4178. value of EICO MODULATOR

Hi all;

For Sale: Heath SB610 Station Monitor, clean, fully operational, well built. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $110 OBO, includes manual.

This equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS. I'll split the shipping with you.

Thanks, and I look forward to hearing from you!

I think we need to understand that it is not EBAY that is the culprit. They offer only a vehicle. I am sure that they have very effective filters to deal with large volumes of mail and any attempt to bother them would be pointless-in fact it would only indicate to them the effectiveness of their system.

And EBAY will not be the end of it. Organized E-Commerce is the wave of the future. The last few hamfests I have been to have been the same depressing collection of beat-up MOTOROLA radios and clapped out WW II junk. I see some really clean stuff on EBAY. As an EBAY seller and buyer I find that there are many interesting items. I sell at a profit to fund my collection of equipment and to support my hobby. Sometimes the prices are high and sometimes there is a bargain. And there is the advantage of a very orderly market.

There will always be opportunists in any area. My feeling is that EBAY is there because it is needed. What happens to things that aren't needed ? they go away.

just one person's opinion

I don't think eBay isn't at fault whatsoever, JJ. Ebay is only the "vehicle" used by a few persons here who insist upon spamming these newsgroups with their repeated and annoying "eBay teasers".

There's still a definite sense of "community" amongst most hams, and it's seen here often. An effective method of demonstrating our "disgust" with these constant spammers and "eBay flippers" is simply to boycott buying their wares until such time as they stop spamming here. Ignore them, don't buy from them or sell to them, and they'll get the message as their own greed does them in.

Spamming is a violation of their ISP's Terms and Conditions of Service.
Report such spamming to their ISP by sending a complete copy of the spam,
being sure to include the message "headers". Forward it to:
abuse@<address of their ISP>

Enough complaints, and they're history (until they find yet another ISP)!

Because ebay advises members to post such teasers, after all, the more an auction is advertised the more ebay stands to profit also. Since it is EBAY MEMBERS who are posting such teaser ads, ebay could take some responsibility and suspend ebay members who continually abuse Usenet newsgroups by posting ebay teaser ads to discussion groups.

I will have a Hallicrafters HT-37 that needs some TLC
at the Belton hamfest. Needs cleaning and a rectifier
tube but otherwise looks like it's still "alive."
First $60 cash takes it.
I'll be there very early morning.
I'll be on 146.52 simplex FM.

I will also be looking for military gear to buy.
Give me a call with any you want to unload.

Looking forward to seeing some friends, too!

A forum like Ebay gives a worldwide audience to anybody selling anything. Naturally this gets the best possible price for the seller and makes it difficult to find any "steals" there. Anybody used to getting stuff on the cheap, like at hamfests, will naturally not like this situation.

But it's the same for everyone - they can sell stuff just like the next guy and get good money for it. In the end it is only the scale that has changed (everything now more expensive) so if you keep up with the times you can do just fine.

Besides, I like seeing this stuff, which many people still call "junk", fetch decent money. Helps keep it alive and out of dumpsters.

As most radio historians are aware, short wave in 1921 (when this receiver was introduced) was what we now know as the standard broadcast band. If working, it should pick up plenty of talk shows!

<And notice they say nothing about posting only to groups that allow ads
or only to .markeplace or .swap groups. It just "advertise your item on
bulletin boards or newsgroups." Irresponsible on their part.>

The say you should post it to appropriate news groups. If it's not appropriate
here, then eBay doesnt want it here. Most of my experience with eBay has been
as a buyer. I only used eBay to sell one time and I never noticed those
comments. Perhaps they were there last year but the type is too small for my
tired old eyes.

73,
Steve W2ZR

4204. Help Needed with Tek 453 scope...

Newsgroup: rec.radio.amateur.boatanchors

Hi all,

I have an old Tektronix 453 oscilloscope that has a bad HV/Flyback
transformer and I have been having a tough time finding a replacement.
If anyone has a flyback for the Tek 453 or happens to know where I can
find one please let me know. Also, if anyone has a scrap 453 they
would be willing to sell for cheap, I would be very interested.

Thanks in advance!

Hi Fellas;
I have for SALE:
Real Nice Nye Viking MB II Roller tuner, capable of legal limit. It isI s/n 1381 and comes with the MANUAL. It has a very large Variable Copper Ribbon Inductor with a Split Section HV Variable Capacitor. Tunes any wire over 1/8 wavelength long or longer in Excess of 3 KW into loads of 40 to 2000 ohms from 1.5 to 30 mhz. Can Handle Coax, long wire and Twin feeders. The Balun was an option and this one appears to have been added later. I have tested this tuner at 100 watts in my dummy load and it appears to be just fine. There are a few, very few paint chips in it's grey Hammertone cabinet but Front panel is just about Mint with no scratches or chips! It measures 14"w x 12'dp x 8'h with feet. While this may not be the newest model, it sure is built like the "Brick outhouse" we've heard about.
PRICE SHIPPED CONUS is $300.00
Here are a few pictures for interested parties>>

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

From: "David L. Stinson" <arc5@ix.netcom.com>
Message-ID: <37F4EE86.303384B5@ix.netcom.com>
Source record: 78435

Please note:
I must ask (forlorn hope is more like it)
that a thread not be started here.
We've all heard your opinions of Ebay a thousand times.

My point is to address fellow Ebay users here about a problem,
and *THEM ONLY*

Doubtless, the obnoxious vocal minority will
reply with a long ranting thread, but I will
not participate nor read it. I ask that those of you
who are grown adults with common sense please abstain from doing so.
If you click on the tread and get upset, don't blame me-
I asked you not to do it, and I didn't push your mouse button.
If you wish to tell me off, please do so in email.

Kind Thanks,
Dave S.

Fellow Ebay Users:

A few malcontents are sending harassing emails to those of us
who post clearly-marked and allowed-by-charter FA notices.
You do not have to stand for that.
They are in the wrong- not you.

Harassment on the internet is a serious matter
and more ISPs are taking fast action about it.
If you receive harassing email from a self-appointed
Usenet Cop, forward a copy of it along with a
harassment complaint to his internet provider.
For example- If you get nastymail from

joeblow@whatever.com

then forward your report to

abuse@whatever.com and
support@whatever.com

Your complaint along with those of others he's harassed
will bring action from his ISP.
They will usually warn the person the first time and
suspend his account the second time. I'm pleased to say
I have the scalps of two fellows on this very newsgroup
(hi guys!) hanging from my belt over this,

and they don't write me nastymail anymore.
Looks like a certain Extra class may soon join them.

Remember that these people are a loud and obnoxious
but very small minority. The overwhelming majority of
people are mature grown-ups who either appreciate the
notices or have the common decency and consideration to
set their filters without whining about it.
Attempts to amend the charter have failed repeatedly
because there is simply not enough support for the minority view.
Internet auction sales are the future.
In time, the detractors will be swept into the dust bin,
as they have been ever since the coming of the wheel.

Kind Regards,
Dave S.

I have a Gonset Super 12 tube shortwave converter for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=171238846

and the description is

This is a near-mint example of the venerable Gonset Super-12 Mobile shortwave converter. Runs on 12 VDC, and covers the 10, 11, 15, 19, 20, 40, 49, and 75 meter bands. Face is in nice condition showing the beautiful contrasting light blue and white dial, with a slight bit of checking on the chrome surround which will probably clean up ok. Uses a unique tuning method to provide gobs of bandspread for each band covered. This rare converter is especially nice in that it includes the 49 meter band, which is good for general SWLing. Used in conjunction with an AM radio, either fixed or mobile. Case has a couple of mounting holes that I don't think are original, but otherwise the radio is in excellent unmodified working condition. Uses tubes 12EK6 (2) , and 12EL6; comes with a spare 12EL6. Includes copy of documentation and antenna connecting cable.

Closes 10/3/99.

Thank-you.

So that's 8 to 8.4 MHZ, no ?

I found dad's xtal grinding stuff recently, but I don't think there was
any indication of just what the powders were. There were two and the
glass plate - dulled on one side, of course.
Keeping the two surfaces parallel, I think, is important. Also, if
it has poor activity, grind the edge, or is it edges, just a bit

4230. Help: Info about AN/ART-19A transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-02 00:00:00 UTC
From: Sindre Torp <sindtorp@online.no>
Message-ID: <rzuJ3.864$Tm3.4044@news1.online.no>
Source record: 78293

Hello from Norway,

Thanks for reading this.
I need information about the AN/ART-19A transmitter. I don't know anything about, so every kind of info is most welcome.

Well, why do I want this info?

You see, I'm a very serious collector and user of equipment made by R.L. Drake Company. And Drake made the Model 505A power rectifier unit for the AN/ART-19A transmitter.

Thanks for your help!

4235. Re: Help: Info about AN/ART-19A transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-02 00:00:00 UTC
From: "David L. Stinson" <arc5@ix.netcom.com>
Message-ID: <37F6A775.C0D2BC45@ix.netcom.com>
Source record: 78298

I have an operation and instruction manual for the AN/ART-19.
It is not marked as to who built the T-121 AN/ART-19 transmitter,
but it doesn't appear to be Drake equipment. It is a simple, crystal
control, 50 watt airborne HF beacon transmitter,
using a code wheel keyer and powered by a BD-Ax-83 dynamotor,
and is WW-II era equipment.
It feed a trailing wire antenna which was automaticly
extended when the transmitter was activated.
There are no provisions for using it with any receiver.
A curious thing- The transmitter assembly has its own
independant 28 VDC battery supply which is not connected
to the aircraft power system.

I have one of these transmitters in my collection.
I have no documentation on it's actual mission-
just a speculation that it may have been somehow "clandestine,"
since there are no makers markings on
either the transmitter or the manual,
it sent only two pre-set code characters and that it was
designed to work regardless of the type or nationality of
aircraft in which it was installed.

I'd like to know more about your transmitter and
how it came to be designated "AN/ART-19."

Kind regards,
David Stinson AB5S

Source record: 78299

Carey,

Whenever I ask for direction, seems a dozen guys are just waiting for the chance to tell me where to go. !!!

True story: Drove with a 30ish fellow to the VE Test Examinations. He was petrified. "Get a cuppa coffee, and mix with the crowd a bit - we got lotsa time."
He did. Few minutes before test time, I said, "Most of these guys are already hams - Do they really seem that much smarter than You?" "No," he admitted.
"Well, if this bunch of Yahoos can pass the test, so can you." ....He Did.

Point is ...study up and go for it. Enter Ham Radio via the Codeless Technician route, buy a 2 meter handheld ($150 new; a lot less used.) Start talking to people. You'll learn a lot. For really puzzling things try this or the related news groups. You will be pleased at the great number of folks who will truly show interest and try to help.

The Viking you mention is not at all hard to tune or work on - for folks who grew up with vintage equipment of that generation. However, I'd advise modern "No-Tune" solid state gear to start nowadays. With a bit of experience under your belt, you can take solder gun in hand and tear into that formidable old box.

Last bit of free advice: (...free advice is always worth exactly what you paid for it)
Find a local ham, give him a call on the phone and get aquainted. [Don't know a local ham? - ...easy to find via internet or request a list of hams in your zip code from ARRL] Get local ham to invite you to local club, local hamfest, local Field Day.

When you get that license, give me a call. The time to start is right now, while you are "laid up". Lots of time and not so many responsibilities. Like I said before....
Go For It !!!!

For Sale: Filter Choke. Potted, porcelain terminals. Been dragging this one around for decades for a project that never made it to the drawing board. Made by Bendix Corp. Rated 4 hy at 1.7 amperes. DC resistance 15 ohms. rated voltage insulation >800 volts but construction suggests >1500 volts. Not a light weight unit, but the perfect choice for the really heavy duty tube power supply. $40 plus UPS from 95827 guess the weight at around 30 lbs..Will weigh for interested folks.

tnx for the read

Source record: 78301

For Sale: Heathkit HR-10 receiver. Nice front panel, case is fairly nice with a few scratches, none too bad. Works quite well for a simple design. Construction is quite satisfactory. All knobs are in good condition and original. No manual.

$85 plus UPS on 20 lbs from zip 95827 I will pay for the versapack foam-in-place packing.

4239. Requesting A List Charter Change

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-02 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <rvdd37dgc479@freenews.remarq.com>
Source record: 78302
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

After today's barrage of auction posts, some labeled and
thus removable with filters and some not so labeled, it seems
time to recognize reality and make a change.

The auction folks have no need to post here. 100% of those
who like auctions know exactly where to go to view everything
on them. If they wait for posts here they'll miss a lot of stuff!

The rest of us are forced to filter out the auction posts, and to
tolerate a new barrage of cleverly labeled auction posts (mislabeled
to bypass our filters).

The fact is that non-auction folks need these lists and auction folks
do not. Let's stop lining the pockets of the auction corporations
by allowing them to abuse this list as an advertising forum. They
have millions in their advertising budgets, we don't.

Sorry for the bandwidth, sure is a whole lot less than the no-longer-
necessary auction posts waste! 73, DavidC K1YP

4240. FS: CE 20A ssb exciters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-02 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <37f6b617_1@news.calweb.com>
Source record: 78303

For Sale: Pair of Central 20 A SSB exciters. I'm never going to find the time to use them on the air. One unit is complete including the vox unit and is operations although an alignment will probably be in order. The second unit is nearly complete, but is missing one of the audio transformers used in the phasing SSB generators. Offer includes 4 NIB 6AG7 tubes for the finals. The front panels are nice, but some of the attachment screws have rusted and should be replaced for cosmetic reasons. Both have fairly clean chassis, but kind of dull looking. Prefer a local sale, but will ship if buyer picks up the 10 bux each versapack fee plus surface UPS fees. I have quite a bit of documentation on the units, prints and manual sections (mostly first generation copies) which include the conversion instructions for converting an ARC-5 transmitter to function as the VFO for the unit. I do not have any VFOs for these unit as I sold them last year.

$90 for the pair as described plus shipping as noted from zip 95827

I would guess at the weight at around 30 lbs each , I'll weigh them out for interested parties. For those that want copies of the docs and not the radios, let me know and I'll arrange for copies to be made. I also have a nice Rack Mount version of the 20A available. It is complete and can be made functional with a bit of tweaking and a few tubes. The front panel is black crackel as opposed to the standard CE gray paint scheme. Looks like a factory job as the lettering is quite nice. $75 for this one as described and I'll pay for the versapack if buyer picks up the UPS on about 30 lbs.

Tnx for getting to the end of this long post.

Jon,

The RME 4350 was circa 1958 or so. It had a matching speaker and for a few bucks motre you could get a SSB adapter/speaker (4301) which also matched the earlier 4300. These sell for about $150 if in working conditions. Best bet on a manual is either W7FG Vintage manuals or The manual Man. (Repos). Hard to find an original manual unless it went with the receiver.

Here are the subjects of the posts received here today (saturday)
on rec.radio.amateur.boatanchors
(different ISPs may send you more or less messages):

Help, advice, information, wanted, etc.: 22
FA: 3
FS: 12
Griping about Ebay: 7
FA post not properly marked: 0, as in ZERO, as in NONE.

'nuff said about that.

> The auction folks have no need to post here.
Unsupported personal demand for control.

> 100% of those who like auctions know exactly
> where to go to view everything on them.
Unsupported personal opinion.

> The rest of us are forced to filter out the auction posts,...
Just like you're "forced" not to read each and every article
and classified ad in your morning paper? Nonsense.

> and to tolerate a new barrage of cleverly labeled auction posts > >(mislabeled> to bypass our filters).
Demonstrably untrue as proven above.
Moreover, even the honest FA posters want mislabeling stopped
and, for the most part, it has been.

> The fact is that non-auction folks need these lists and auction folks
> do not.
Unsupported personal opinion and demand for control.

The bottom line has not changed- the vocal minority continue to
protest and thump their chests, claiming high-minded reasons
which cannot stand up to even the simplest tests of logic.

The truth is that they are motivated by baser emotions-
greed, envy, a primative need to force their control on others,
and denial of their personal responsiblity for what they freely read.

They continue to demand that, at a party with 1000 different guests
with 1000 different likes, there be no chocolate cake
because *they* don't like it. It's a wonder that they can't
grasp the simple concept: "If you don't like it, don't eat it."

But please continue on the (tenth, eleventh??) attempt to
raise support for changing the charter. While they're
doing that, they're leaving honest people alone to
go on living real lives.

(Personal attacks by the minority will follow.
It's their way when facts and logic don't support them.)

Sincerely,
Dave S.

Someone was looking for a boatanchor receiver in mtl.vendre-forsale just the other day. He was going to be in town this weekend and hoped to find one. I think he even mentioned the CR-92 as a possibility; I know he mentioned the AR-88. He posted on Wednesday or Thursday so the message may not have expired yet.

What good will a charter change be? You're wasting your time.

The facts of life are that anybody can post whatever they wish anywhere they wish on non-moderated newsgroups. That's the way it is an you can change charters until you're blue in the face and it won't do any good.

Your energies might be better spent politely asking those posting in PRIVATE e-mail to honor the "truce" of using FA or eBay in the subject line.

Let's just filter out any message with "charter" in it.

How about if all the complainers use "useless complaint" or "everybody look at me" in the subject so the
complaints can be filtered as easily as the FA posting can be. I suspect the complainers don't have an
elementary school kid in their neighborhood to show them how to set the filters.

You didn't preface your subject line with WAAAAA (Whining About Auctions Again As Always). Can you also add this to your new charter?

> Let's stop lining the pockets of the auction corporations
> by allowing them to abuse this list as an advertising forum.

Does this include all the commercial ads posrted by hams? How about the Hams running shops to make a living, do we ban them? Where does it stop David??

> Sorry for the bandwidth, sure is a whole lot less than the no-longer-
> necessary auction posts waste!

Actually it was longer than most auction posts. But you are special and this NG should only carry what YOU want to see?

Nobody in the Whine About Auctions Action Association seems to want anwser this question I have asked again and again. Do you read EVERY post on the NG. Actually open it up and read it?

WAAAAAA!

A fellow ham locally has an absolutely beautiful Kennedy model 281 shortwave receiver. This unit is circa 1917 and is in wonderful condition. Completely original and working, and cosmetics are 9.5 on the scale of 10. This is the finest example of a very early shortwave receiver that I have seen in my 40 years of hamming. It has a gorgeous wooden cabilet with black front. All original knobs and no scratches. Original earphones included. He is asking around $800 or would consider trading for a nice HF rig. Here is your chance to own a collector quality Kennedy. Please do not respond to my posting. His email address is:

Hi Tim
I have a Ranger, it looks quite good. I have not fired it up yet but
it's just taking up space right now. I had plans on putting together a
small AM Setup but lost interest. It has an antenna switching relay and
push to talk. Shipping is about $35 $190+shipping

4263. Re: "Flipping Boatanchors" from here to eBay

I saw an NC-98 go for $58 on ebay today. It would
be tough to reliably profit from that. Not to mention
all the shipping hassle to "flip", especially with large
heavy tube equipment. You'd have to flip quite a few,
to make it worthwhile,
and work your tail off in the shipping department. Then
there's the no-pays, unhappy buyers, shipping damage,
buyers who excessively pick the sellers brain, returns,
escrow, etc...
There's a lot of easier ways to make a living! Just enjoy
the rigs!
-Pete

4267. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7t472v$n3o$1@news.hawaii.edu>
Source record: 78364
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

*rec.radio.broadcasting (devoted to the broadcast industry; moderated)*
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an
automobile accident; the future of this newsgroup is not known. 73 Bill...

I bought a Viking Challenger on eBay and, when I decided I needed to sell off some gear, sold it right here for 35% more than I paid for it. I didn't buy it for the purpose of selling it for a profit. It just worked out that way.

Source record: 78379

I'm looking for some small cabinets for nostalgia Home Brew Projects. Something along the line of a Bud Model C-993 or equivalent would be great. That one measures 10" Wide, 7" High, and 6" Deep. I can work with something a little larger or a tad smaller. Not too pickie! Has a trap door on the top, louvers on the side, detachable front panel, and with or without a matching chassis.

I'd prefer an unused one, but could work with something with limited previous holes (e.g., I could make a new front panel). Any classic finish (black, grey, wrinkle, hammertone) would be fine.

Drop me an e-mail if you have something in this line.

Thanks!

73, Dave K7HMP

For Sale:

= = = = =

TANDY DX-160 tabletop shortwave receiver, with original manual. This
5-band
solid state communications receiver covers 150 kHz to 30 MHz. Long
wave to 10 meters!
Receives SSB, AM and CW modes, plus amateur, CB and all shortwave
broadcast bands.
It is in near-mint condition. Has one very small scratch on right
side.
Otherwise perfect. Front panel is like new, with all original knobs
etc.
Front panel has RF Gain, AF Gain, Main tuning and fine tuning
controls,
S-meter, AVC slow-fast control, BFO pitch, mode switch, antenna trim,
standby switch,
mode control, headphone jack etc. Rear panel has standby connector for
operating
with a transmitter. External speaker jack. Has inputs for 120V AC and
also a jack
for using 12 V DC.

Will sell for $125.00

= = = = =

ICOM IC-215 Portable 15 Channel 2m FM transceiver with microphone, DC
Power cord
for AUTO cigarette lighter outlet, shoulder strap, original
microphone, shoulder harness and
built-in whip antenna. Controls for volume, squelch, HI/LO power,
Light OFF/ON,
frequency select and switch for OFF/DIAL/A/B/C selection.
This radio can also be used with batteries (Nine 'C' cells)
or external 13.8V DC supply. Has built-in speaker. Connectors for
external antenna,
DC input, mic, ext. speaker etc. VERY good condition. Front panel is
immaculate.
Has 12-channels set-up as:
146.04/64
146.34/94
146.16/76
146.22/82

146.28/88
146.30/90
147.74/24
147.66/06
147.90/30
146.52 Simplex
146.55 Simplex
146.58 Simplex
Plus three additional fixed channels:
A 146.52 Simplex
B 146.34/94
C 146.94 simplex

Can be used fixed, portable using shoulder harness, or mobile.
Will sell for $45.00

= = = = =

DRAKE AC-4 Power Supply in excellent condition with all cables. FOr
use with the TR3, TR4, T4X etc. Will sell for $85.00

= = = = =

Heath HW-2036 2m FM Transceiver with original touch-tone (DTMF)
microphone for making
auto-patches. Radio is in excellent condition. This is a thumbwheel
switch tuning
synthesized rig that covers the entire 2m band 144-148 MHz in 5 kHz
steps.
Has built in analogue S-meter, volume, squelch, Tone OFF-A-B-C and
offset/aux controls.

Despite your orders not to share this with others I will
exercise my free speech rights, so long as they remain,
to share my feelings. I am one of the silent ones whom
you assume to support auction posts, I am no longer silent
and do not appreciate the advance label of "obnoxious
vocal minority" ... but if that is the way you must defend
the defensible ... it indicts you, not me.

Now that everyone knows where the auction sites are, and
everyone has easy access to search them for Ham radio
listings, why do you feel it necessary to post on the Equipment
list (which is not for swapping) and the Swap list (which has been
the best list for we non-auction posters)?

Seems that posting to the newsgoups at all is unnecessary
given the massive corporate investment (and profits) from
the successful promotion of the auctions.

BTW: The lack of a majority calling for auction posts
to be banned is not to be misrepresented as majority approval
for them, it merely is the common tendency of people not to
speak up either way. With the increasing abuses (have you
seen rec.radio.swap today?) the volume of no-more-auction-
post requests from users will increase for sure. It is an unnecessary
nuisance.

Again, why force non-auction folks here to read what auction
folks may readily view directly on the auction site(s)?

BTW: There is *no* either, or, about this. Auctions have
joined the mix but will never 100% replace the direct horsetrading
that so many of us enjoy ... for some it is about more than profit
and competition ... some of us actually enjoy the fellowship.

73, DavidC K1YP

ps: Oh, and this may not be considered spam or harassment, so
don't even go there.

4288. Beginner needs help; direction

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-02 00:00:00 UTC
From: Cary Fries <SkyriderDefiant@Roswellrods.Zzn.Com>
Message-ID: <pAqJ3.2262$7f6.11441@newsfeed.slurp.net>
Source record: 78385

Greetings:

I don't have my license yet. I have been interested in getting into ham for along time, and recently bought a Viking Valiant 1. Looking through the operating manual, I can see that I am way over my head here. I couldn't tune this beast up if I wanted to!

I have a very fundamental knowledge of electronics, but frankly would not have a clue as to how to troubleshoot this unit should it ever go on the fritz. In addition, my SX-24 has been in the local shop for 6 months waiting to be repaired. My dilemma is two fold: I was in commercial broadcasting behind the mic for 15 years until a recent illness forced be to quit indefinitely. While I enjoyed radio, my real interest was with just with working with the electronics end of it.

When I recover, I'd like to go to school so I can become a broadcast engineer and also be smart enough to troubleshoot and fix my own ham stuff. My question, is, where do I start? I am 35 years old and will me starting my life over. I am always astonished at the knowledge displayed in these newsgroups by hams, and I wonder how they got where they are. I would appreciate hearing how you got *your* start and how *you* got to know so much about electronics. It seems so very complicated and I wonder if it is too much for me. I have above average intelligence, but when I look at a schematic, it confuses the hell out of me. I need some direction here...I think I'm frozen by fear.

Thanks for taking the time to read my long letter.

Regards,

Cary Fries

Source record: 78387

A group of four Hammarlund general coverage boatanchors for sale as a collection. Item one is a 129X with a matching speaker. The speaker does not say Hammarlund on it, but it is the exact same gray wrinkle finish as the receiver. It was originally purchased as a set. Both pieces are in good condition cosmetically. I don't want to overstate the condition so I'll say a 6 or 7 out of 10. The receiver is hot, working well on all bands, and comes with an extra set of tubes. Items two and three are Hammarlund HQ-180's. Both ore in nice shape cosmetically except one is missing the "E" in the script on the front which says "HQ One Eighty" They both receive well on all bands. the best of the two has been recently aligned, and is right on. On the other the dial calibration is slightly off, but it receives as well as the other. Sorry I don't have the S-200 speaker. The final item is a beautiful HQ-100, just aligned and working well on all bands. Cosmetically I would say the 100 is at least an 8, possibly a 9. It comes with the S-100 speaker which is just as good looking. The firm price for all four units is $950.00, plus shipping from 61107, Rockford, Illinois. There would be no charge for safe packing including double boxing. I'm sorry I don't have the tools to privide pictures, but I will be happy to answer specific questions via email.

HI,

My SP600 JX-17 has been modified per the AF0IRO (Dick Gatzke) instructions which give it a product detector and modified AGC. My problem is that I need the schematic of the mods in order to find out what is wrong with the modified AGC.

Does anyone have a schematic of the mods or have any leads for me?

Thanks,

Bob

In case there is any question whatsoever about the affect that the dreaded ebay is having on the boatanchor hobby, reference this: I just watched a National NC183 (not a NC183D, mind you) go for the ASTRONOMICAL final price of $813.00!!!!! Now I will admit that it had been touted as having been in storage for the last 50 years and was immaculate as far as being clean and free of scratches. It also came with it's matching speaker and maybe even it's original box, But $813.00???
There is no response necessary to this thread.

For Sale:

Knight Filament transformer 54-3714 NEW in Box!
Primary 117V AC 50/60 Hz
Secondary 5V CT at 15 Amps. Made in USA.
This excellent filament transformer is just what you need for
restoring vintage transmitters or as a collectors item. Power your
next project with a real classic! Will sell for $15.00

= = = = =

Plate transformer:

TRIAD P-5A
PRI. 115V 60 Hz
Sec 1. 1100V CT at 250 mA
Sec 2. 5V at 4A
Upright style with nice gray end bells. Will sell for $25.00

= = = = =

UTC S-62 filament transformer 10V CT at 5 Amps (M) $12.00

= = = = =

120V Primary / 6V AC at 166 Amps! (S) $90.00

120V Primary / 9V AC at 111 Amps! (S) $90.00

115V / 230V AC Primary, 7.5V 51A Sec Approx size:
4.5" X 4.5" X 4.5" tall $80.00

115V AC Primary / 7.5V at 46 Amps $80.00
(QTY 2)

Cary,
Welcome to a new world of electronics. Like any other adventure, you will need to learn the jargon (the words, the lay of the land, the way to get around.)

Think of a schematic like a road map. If you look at one for your area it may be overwhelming. But if you work on the section where you live, you can identify elements that are familiar in your neighborhood. Think of the schematic as the nuts and bolts detail down at ground level (the resistors and capacitors).

Many times there is a block diagram gives an overview of the unit. It is usually in the theory of operation section. Between the the block diagram and the theory of operation one usually gets an idea of the various circuit functions that exist within the unit. And, will usually identify the tubes that are involved, and start describing the function in detail.

The schematic is usually laid out with some master plan in mind, some sense of flow. Typically left to right, with the major function at the top. Support circuits arranged below. For example your SX-24 has the following circuits: RF Amp, Mixer(1st detector)/HF Oscillator, IF Amp, 2nd detector/AVC, BFO, Audio, Power Supply. In this case the IF amp actually consists of two 6SK7 tubes(plus circuitry), and Audio is part of one tube and all of a second.

What I am attempting to say is that you need to attack the schematic in piece meal fashion. A little bit at at time.

Would suggest getting a hold of a copy of the ARRL's Radio Handbook, if you have a used bookstore in the area check and see if you can locate one a few years old, its cheaper and the theory that you are looking for has not changed. Their URL is www.arrl.org, another fun site is www.halicrafters.org where you can see material about your receiver.

Another recommended site is rec.antiques.radio+phono which caters to people interested in restoring old broadcast radios. Many of them are learning the basics of electronics/radio so there are many opportunities to learn. Plus there is a good FAQ with basics. There is a wealth of information available between these two sites, snoop a lot and learn, then ask questions when no one has raised your particular question.

Good hunting and welcome to the strange world of glowing radio.
Denis

>
>Thanks, Jeff

Hello Jeff,

As others have pointed out, the use of a 6V6 or similar tube was a standard "fix" for a burned out 4H4-C. Nothing will be harmed by such a swap, and no modification is necessary. If you can find a worn out or internally shorted 6V6 that still has a good heater, so much the better. Some hams would actually seek out such tubes, then cut off all but the heater pins so the tube would not be mistaken for a good one.

However, nobody has mentioned why the 4H4-C and other regulator tubes were used in the first place. The basic reason was to improve frequency stability under varying line voltage conditions, because many of the oscillator circuits used were sensitive to heater voltage changes. Since many boatanchor designs had self-controlled local oscillators running at tens of MHz, the improvement could be considerable.

These tubes consist of an iron wire in a gas or vacuum, and are essentially current regulators. Over a certain range, when used in series with a regular tube heater, their resistance will vary in such a way as to produce a "nearly" constant current through the entire circuit. And when those receivers were designed, the regulator tubes were not expensive. They were only used in top of the line gear, too. They do have notoriously short lives, though.

Some hams who want the ultimate in performance out of their BA gear have resorted to (ugh) solid state regulators to replace the regulator tubes. Of course this approach works very well.

Hi Fellas;
I have for SALE:
A New, never used ETO, now Alpha-Power, DAS or digital antenna selector as they call it.
It is a fairly new product and allows you to select up to 36(?) antennas digitally from the RS-232 port on your Alpha amp to this DAS device.
It is from an estate, looks new, no papers.
Cost new is $495 from Alpha, here a link so you can read about it yourselves.>>
http://www.alpha-power-inc.com/html/alpha_das.html
Price is $325.00 PPD CONUS
Thanks es 73....Rich WA2RQY (1961)

Yes Michael this was me looking for the cr-91a or ar-88. Andre told
me he didn't have time to meet me while I was visiting Montreal this
past weekend. Now I see he's got it forsale. it's hard to believe that
a forgotton radio in someones basement is now on this newsgroup forsale
because of my interest in wanting to purchase one. It almost looks like
now he figures he's got a gold mine. Anyway as a side note I purchased
a near mint condition ar-88 while in Montreal this weekend. And no, it
wasn't purchased at the west island radio fest.

Regards, Jeff

For Sale:

TANDY DX-160 tabletop shortwave receiver, with original
manual. This 5-band solid state communications receiver
covers 150 kHz to 30 MHz. Long wave to 10 meters!
Receives SSB, AM and CW modes, plus amateur, CB and all
shortwave broadcast bands.
It is in near-mint condition. Has one very small
scratch on right side. Otherwise perfect. Front panel is like new,
with all original knobs etc.
Front panel has RF Gain, AF Gain, Main tuning and fine
tuning controls, S-meter, AVC slow-fast control, BFO pitch, mode
switch, antenna trim, standby switch, mode control,
headphone jack etc. Rear panel has standby connector
for operating with a transmitter. External speaker jack. Has inputs
for 120V AC and also a jack for using 12 V DC.
Will sell for $125.00

= = = = =

Heath HW-2036 2m FM Transceiver with original touch-
tone (DTMF) microphone for making auto-patches.
Radio is in excellent condition. This is a thumbwheel
switch tuning synthesized rig that covers the entire
2m band 144-148 MHz in 5 kHz steps.
Has built in analogue S-meter, volume, squelch,
Tone OFF-A-B-C and offset/aux controls.
Will sell for $75.00

= = = = =

Heath HWA-202-1 Power Supply 120V AC to 12V DC. Looks
just like the HW-2036 - same green and chrome styling.
Will sell for $39.00 (or with radio, $25.00)

= = = = =

Knight Kit P-2 SWR meter in very good condition with
manual. Comes complete with remote sensing head, cable etc.,
and in proper working condition.
Will sell for $35.00 plus shipping

= = = = =

DRAKE AC-4 Power Supply in excellent condition with all
cables $85.00

= = = = =

DRAKE TV-3300 LP HF low pass filter in excellent condition.
Uses SO-239 connectors.Rated for 1000 Watts below 30 MHz.
More than 80 dB of TVI-BUSTING attenuation above 41 MHz.
Will sell for $25.00

= = = = =

Knight Power transformer 54-3714 NEW in Box! Primary
117V AC 50/60 Hz
Secondary 5V CT at 15 Amps. Made in USA. This excellent

Hi, I've got a TR-4C, MS-4C, AC-4C for sale. The radio is serial number 34886. The radio might be a 9 out of 10. I never cared for that numbering system much so I have pictures available on the radio and speaker/supply. There is a scratch on the right side of the MS-4.It works great and I use it all the time you can hear it on the air any time in the evenings or Saturday morning, (depending on your location). E-mail at swb1@flash.net for pictures. I'm asking $400.00.
Thanks
Steve KC5TFL

For Sale:

ANTENNA CHANGE OVER RELAYS for LADDER LINE!

1) Made by Allied Control Company.
Antique relay used for antenna changeover on standard
ladder line antenna transmission lines. 120V DC operation.
Metal frame construction with ceramic posts.
SPDT with cap nut connections on mica insulated surface.
Good for at least 500W, maybe 1KW. Measures 3.0" X 3.4" X 1.65"
QTY 1 only. Will sell for $12.00

2) Made by Pollack Co. Boston, MA
Antique relay used for antenna changeover on standard
ladder line antenna transmission lines. 120V DC operation.
Metal frame with ceramic posts. One post is missing,
but does not affect operation. Easily replaced.
DPDT w/cap nut connections on insulated surface.
Good for at least 500W, maybe 1KW. Measures 4.75" X 3.4" X 1.65"
QTY 1 only. Will sell for $15.00

Shipping additional.

More relays, time delay relays etc. for sale - details at:
http://www.geocities.com/CapeCanaveral/Hall/8701/relays.htm

I have heard that this unit was used as a marker and "dropped" into an
area, the self-contained power supply and lack of markings would seem
to make sense for a system such as that. Probably not have a seriously long
battery life, but it probably would not need to be that long.

No docs to back any of this up, just pure speculation.

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce 3KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $2,750.00 unpacked.

I have a few tested and Guaranteed 4CX3000A tubes at $750.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site

If you need more info please contact me.

4330. COLLINS COLLECTORS ASS'N SIGNAL EDITORIAL - READ!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-04 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <37f80708.9370459@news2.sover.net>
Source record: 78251

This is the Editorial from the September 1999 issue of
THE COLLINS COLLECTORS ASSOCIATION newsletter THE SIGNAL.

Don't read this if you have a weak stomach or get upset easily.

Last June 4th and 5th I was at the Rochester (NY) Hamfest which has been an annual haunt of mine for over thirty years. While wandering about in the flea market at 6:00 AM I spotted a pile of RE Collins KWM-2As, 30L-1s, 312B-4s and 516F-2s laying on the ground. They had been unceremoniously and systematically beaten with a small sledge hammer. One of the M-2s had been hit square in the front; another on the top of the slug rack and a third dead on the power amplifier cage. A crowd had gathered and animated negotiations were in progress. Hmmm, yeah, I want one too! In and amidst the confusion one fellow pulled a wad of cash from his pocket and managed to convince the overwhelmed and slightly befuddled seller to give them all to him for the proffered sum which I found out later was $700.00.

As the lucky buyer busied himself carrying away his trophies I took a closer look at these unfortunate radios. Most of the KWM-2As had sustained direct blows to the slug rack, PTO assemblies as well as the power amplifier cage. I figure he'd be able to make a couple of workable units out of the lot - but with a lot of time and effort. Whatever the case they'd be good for parts if nothing else. I offered to buy one of each unit from him but he wasn't interested in selling anything there and then. He beat a hasty retreat and kept a low profile for the rest of the flea market as I suspect he didn't want to discuss anything with anybody.

After the crowd had dispersed, grumbling about the guy who "bought them all", I wandered back to have a chat with the seller. He was unloading more stuff and I spotted a lone 516F-2 supply that had taken a couple of whacks and had its' cords cut. He wanted $20.00 for it. So at least I got something! I asked him where he had come across this pile and he told me he got them from somebody who works at the Tobyhanna Army Depot in PA. Tobyhanna is a storage and repair facility for electronic equipment well known to many hams in this part of the country. Their DRMO sales sheets used to feature lots consisting of nice R-390As, KWM-2As, even cool spy radio sets like the RS-1 and RS-6, M-209 crypto machines and other very neat things. A lot of us got great things from Tobyhanna. However for reasons unknown in the past couple of years the government in its' infinite wisdom has decided it is better to "demilitarize" all radio equipment lest it fall into the hands of enemies and terrorists. I'd heard about this independently from Mike Baranowsky and Jim Williams, both

surplus equipment merchants and good guys to deal with. In past years they both had overflowing tables at Dayton but in recent years pickings were slim. This power supply is visual evidence of that policy.

Whoever swung the hammer either wasn't very capable or intelligent about doing his dastardly work. The only damage the unit sustained was a crumpled bleeder resistor cage and one of the bells on the small choke that sits behind the two rectifier tubes was dented. The two tube bases were still in their sockets but the tubes were obviously smashed to smithereens in the attack. From looking at this unit I am guessing that it was in very clean condition until the day came for its' execution when it was casually piled up with other unfortunates to be "demilled". It probably spent most of its' working life on some military base or perhaps in an embassy somewhere. Judging from the heat marks above the rectifier tubes it had seen little use. The cabinet had a few scratches but no dents. There was little dust on the chassis. I jury-rigged a power cord and plugged in two new rectifiers and, you guessed it, the supply worked perfectly. When I get time I'll make up a new cable set and I'll have a nice spare 516F-2 supply for $20.00 and a few hours work.

Who can figure the mind of a bureaucrat? What possible justification can there be for this desecration of this fine equipment? It cannot be for security reasons, or can it? This equipment was freely available back in the 1950s and 60s and the stuff never was classified. Today anyone can buy a much more modern compact HF radio set on the open market so keeping it out of evil hands surely cannot have any validity. It just strikes me that the authorities responsible for getting rid of unwanted and unneeded equipment are just too lazy to go through all the steps required by law to sell it. In other words it's just easier to smash the stuff. What an outrage!

I have written to Senator Leahy (D-VT) asking him to look into this. Sen. Leahy is no real friend of radio enthusiasts (remember the ECPA of 1986!) but he was seen publicly after the terrible Ice Storm of 1998 lauding and thanking the radio amateurs here in VT for their fine work providing communications during the long emergency. In addition I have also contacted the Public Affairs Officer at the D.R.M.S. (the government agency responsible for disposing materiel that is no longer needed). We had a long talk (on Uncle Sam's nickel!) and I explained the situation to her and I believe she understood what I was saying. She said she'd look into it and let me know the rational and reason behind this outrageous policy. I told her I see no reason why this equipment cannot be given to us hams so we might have it available for future emergencies. It's much better than the alternative!

If this editorial outrages and angers you too - good! That's what it is intended to do. Write your elected officials (at least the ones that can read) and ask them why this is being done? Demand an answer. Next year is an election year and many of these bozos are now thinking

about getting themselves re-elected so some of them may actually be responsive. Emphasize the public service and emergency preparedness aspect of our hobby. I don't hold out much hope, friends, but we can't just sit there and let our beloved radios be violated and desecrated under a moronic government policy that makes absolutely no sense to any thinking person, Collins radio enthusiast or not!

As my good friend Tim Smith WA1HLR would say "I'm just so yellified....I just don't know!"

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

As the boundries of the federal government continue to expand, those who resist it's expansion
may be viewed as the enemy. Disiplined militia may be viewed as terrorists. In "their" eyes, they are protecting themselves from the hand that feeds them. Perhaps someday, the checks and balances
that tie the hands of citizens will sway to the point that people will regain control, and we will be able
to hold government accountable for these acts of vandalism.

For Sale:

RF Concepts model RFC 4-310 440 mhz amplifier - 30W in and 100W out - has a gasfet preamp - $235

This unit is in excellent condition. I am upgrading to a more powerful amplifier. If you heard me on during the September VHF contest, you heard this amp at work.

Please note that the TE Systems 6 meter amplifier that I had previously advertised has been sold. Thanks for the many inquiries on that one.

If interested in the RF Concepts amplifier, please contact via email - dry220@worldnet.att.net

Hi Michael,

I can tell you that the military are REQUIRED to demilitarize equipment regularly. This is per regulation. Most often it is done to classified gear but occasionally it will happen to nice items like this. Somewhere in the supply system those units have been assigned a demil code. The average GI has no choice but to demil the item and turn it into DRMO for resale. DRMO won't accept the item until it has been demil'd...

BTW, I agree with you that it's stupid to demil such items...

Chris / Former Air Force type...

4347. De Forest Audion Tube VaLUE??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-04 00:00:00 UTC
From: wertztire@aol.com
Message-ID: <19991004165419.11161.00000555@ng-cq1.aol.com>
Source record: 78268

I have a De Forest Audion Type DL4 RF amplifier tube in Metal tube cannister (original shipping container). The patent info on back of the container says from
1906 thru 1923. Do you have any idea what the value is of this type of tube or where I could find out?

Thanks for your help.

4348. Tektronix model 544 O-scope info.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-04 00:00:00 UTC
From: samwell4304@my-deja.com
Message-ID: <7tbe7rrue1@nnrp1.deja.com>
Source record: 78269

I have recently become the proud owner of a defunct Tektronix model
544 Oscilloscope. I'm looking for technical and user manuals and spare
parts.
Current status on the scope is: console lights function and respond
to switches and knobs but no trace on the CRT. The best I get is a
fuzzy patch of blue on the display once in a while.
Any help the forum can offer will be greatly appreciated.
-Sam

From: wb0poz@prodigy.net
Message-ID: <7tbbl8$22fc$1@newssvr04-int.news.prodigy.com>
Source record: 78272

As a government employee who has, from time to time, had to excess electronic equipment in my inventory I can offer the following:

1) Most people involved with excessing this stuff don't know that it is worth anything. All they see is a huge pile of obsolete shit that they have to make disappear. I saw pallets of100 KWM2s and 30L1s that my employer banded so tight that the front panels bent. Further, this stuff is just thrown around - it is for excess so it doesn't receive any further care.

2) Many times (and I have found myself in this situation) the program manager is made responsible for "de-mil"ing equipment. I have personally been faced with a huge pile of obsolete crap that is still sensitive as far as its capability is concerned (and in many cases I would not want that capability on the open market). So, I have paid a contractor to drill holes thru units, smash them, or do whatever is necessary to make sure they are not usable. This is admittedly insane if someone applies it to KWM-2s, however.

3) The guys de-miling this stuff are not the sharpest hammers in the bag, generally speaking. They are given orders to smash the stuff so it can't be used. The reason for this is that someone knowledgeable bought something at an auction or hamfest that had sensitive (or even classified) components or just plain shouldn't have been surplused. So the program manager got bitched at by security, or received a security violation, which probably hurt his career. To ensure that this wouldn't happen again, he gave orders to make sure it ALL was smashed.

4) The editorial seems to imply that hams have some sort of "right" to un-smashed military equipment. Please understand that the huge volume of stuff that the surplus folks have to deal with doesn't make it possible for them to save stuff that might be of interest to some ham. Do we really need more surplus KWM-2s?

5) Recently, I sent to surplus several pallets of radios, specturm analyzers, components from a disconitnued classified program, etc. I had to PERSONALLY go thru everything and make sure it was OK. This took me much time, which could have been better spent. After carefully filling out the paperwork for every item, (I had assumed that it would go to GSA for auction), my employer's surplus guys decided that it was too much work to fill out the required paperwork to excess (and they didn't have the room) so they called the scrap man. The scrap man came with a dump truck and literally tossed everything in the back. Guy said he was headed for the landfill.... So the whole thing left a bitter taste in my mouth as I literally WASTED 100 man-hours of my time, and my minions' time. All for junk we got $5 a pound for.

This happens every day in the government. There's just too much stuff for the property disposal guys to deal with on a piece-by-piece basis. If Leahy got some damn law passed to save your precious KWM-2s, what next? A law preventing KWM-2s from being stored outside at the surplus yard? A law preventing banding and palletizing 30L1s more than 2 high? Where does it end? The government got its money's worth out of this junk, now it just wants to be rid of it. And who really cares?

73 John

4357. Dial Calibration on Drake R4-C

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-05 00:00:00 UTC
From: Hobbes <hobbestg@voicenet.com>
Message-ID: <37FA71B3.267D@voicenet.com>
Source record: 78196

Can anyone in this group either point me to a web site or tell me how to adjust the tuning dial on a Drake R4-C receiver that is approximately 40 KHz off of the frequency it is supposed to be? For example 3900 KHz shows up at approximately 3940 KHz! I have tried to adjust the dial by holding the main tuning knob and moving the back skirt knob but I cannot shift the frequency as read by the dial such a large amount. Any help would be appreciated. Thanks
Ed K2SNK

4378. FS: Collins 180U-2 Antenna Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-05 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <37f9f474.50434333@news2.sover.net>
Source record: 78285

This is a nice compact antenna tuner from the KWT-6 transmitter. It is very light and extremely well built. Uses a combination of fixed and variable capacitances along with a nice roller inductor. Front panel has the same multi-turn knob as the KWM-1. Is rated conservatively at 100 Watts Carrier (AM/CW key down) which translates to about 175 Watts SSB.

The cabinet has been repainted (black), feet have been added and a ground post has been mounted in a spare hole on the rear panel. These mods are 100% reversable if desired.

Price is $65.00 plus UPS. If interested please reply by e-mail.

73,

Michael Crestohl
mc@sover.net

Source record: 78292

I have a next-to-new Drake TR7(w/ fan and NB), RV7, MS-7 and PS-7 with a set of W7FG manuals. The general coverage mod was done and the TR-7 was back to Drake for mods, etc. in about 1987. The TR7, VFO and speaker are the "sticky" finish, the VFO is the smooth finish. No dings, blemishes, et al. This unit sat on an operating desk, since new. Also included is the matching Drake desk mic. Trade up/down with cash consideration for similar condition 100+ watt, military AM/CW transmitter, operable on (at least) 80 thru 20 meters.

Thanks for the read!

I hate to keep this going, John, but as long as people who work for the government continue to just shrug their shoulders and ignore the waste on the basis of expediency (instead of looking for a creative solution) our taxes will never go down. Waste on the scale of our government's is morally indefensible.

I'm quite familiar with security considerations, having held high clearances under several government agencies.

Source record: 78214

Hi Guys;
Is anyone parting out an SX-100 Halicrafters receiver or just selling some knobs?
Here is wat I need for mine.
Both Tuning knobs, Bandspread and main tuning. Must be in non-chipped condition. Mine are both "chipped" Badly.
Also, i need the CW pitch knob and the small shaft just behind it that only allows 180 degrees rotation in each direction. Mine is completely missing. All I have it the small brass diameter shaft that about even with the front panel.
Any help will be greatly appeachieted, please e-mail with cost.
Thanks es 73..........RICH-WA2RQY RLUCCH2098@aol.com

Source record: 78216

John and others...
Krylon, Plasti-Kote, Professional's Choice, and others make a "Black Wrinkle Finish" paint. I have personally found at least these three brands at most _well stocked auto-parts stores_, such as Parts America, Sears Hardware, and others. The key here is _Auto Parts_, as most typical hardware stores won't carry this stuff. Also -- Motorcycle Shops, and Harley dealers. They carry Black Wrinkle paint, but at a higher price, as do Auto Specialty "Speed Shops". Now, Tremclad and others (Hammerite) are marketing various shades of Hammertone (gray and silver, etc.). also. Now there's no reason why you can;t re-paint that 'ol BA!

Hope this helped.

Ed, VA3ES

Cosmeticaly this radio is about a 7.5, but with a little tlc it should clean up more. It works great, receiving on all bands very well. Tuner needs to be adjusted a little as it is off a little. The s-meter needs some adjustment also. I have run it for over an hour at a time with no unwanted noises or loss of signal. This radio is similar in appearance to the Hallicrafters S-120 etc. I do not have the manual for this radio. Will ship CONUS. Thanks! Jon.

I always recall DX-100's case as having a light gray horizontal bar on top and bottom and a darker gray for the sides. I also recall the paint was mat finish and wrinkle. I am told now that the side were glossy and sometimes both the bars and sides were the same color. Anyone with a better memory than mine out there recall the colors?

Both my DX-100's have identical Grey wrinkle. The entire case is the same color.
The cases originally came "broken down" and had to be assembled. Possibly the case you trecall was a pieced from different paint batches?

Hope this helps.

Hi All,
I have a problem with a Hallicrafters SX25 that I am trying to restore. The set screw on the band swicth knob has broken. By this, I mean that the slotted set screw has borken at the slot and now only 180 of the 360 degrees head is left. Is there any way that I can get this screw out of the knob short of drilling the screw out? I would prefer NOT drilling this thing out... Any help would be greatly appreciated.
rgds,
Mark S.

John, while the government is of and for the people, the GOVERNMENT (i.e. the USG Agency that has been allocated money by congress) bought the equipment. The PEOPLE did not directly buy the stuff, nor do they generally have a direct say in what is purchased to fulfill the mission of the USG Agency. Further, disposal procedures are set forth by the individual agency, usually in consultation with that agency's security.

As a taxpayer, and a person who generally hates to see good stuff wasted, I want the government to get the most out of its dollars. However, treating each piece of equipment separately rapidly diminishes that return because the agency must now pay many more people to go through the stuff, sort it out, be knowledgeable about what kind of stuff cranky hams might write their congressman about, etc. Storage of this junk waiting for surplus sales also costs a lot of money. It most likely turns out that going trhough all the hoops for stuff the government has used the crap out of for almost 40 years is not a cost that the agency will be willing to bear, just so yet another Collins collector can make money by buying stuff at a government auction.

There have been times where, to fulfil my employer's mission, I have had to rapidly vacate space and move inventory into smaller space. I do not have money allocated to rent space so, since you can't put 100 pounds of crap into a 10 pound bag, something has to go (and quickly).

And yes, I do have a nice S-line station at home and am a Collins afficionado. But I seriously doubt whether anyone will be able to change this.

Good luck and 73, John

Can I throw in my 2 cents? the Government buys nothing, the TAXPAYERS i.e.
WE THE PEOPLE buy everything.... when the Government becomes a money
making operation then they can buy sell scrap whatever they like... but
until then they are using and sometimes wasting my,his,her... money, and
that my friends is the problem... the Government\depts\people have forgotten
where the money really comes from... now I feel better.... ahh thanks now
back to boatanchors... anybody got a spare 100kc xtal?

Source record: 78235

Hello, I bought a ba and would like to clean the front panel. The radio has some dirt build-up from age, and I would like to clean it without risk of damage to its original paint, lettering etc. I tried cleaning a small bottom corner with a cleaner similar to fantastic, but found that a residue from the cleaner was left behind. I have not tried reg ular soap and water yet but would like to know if anyone has any other suggestions.

Thanks in advance,

73's

Antique Electronics Supply has what you need, except for the cans. They're getting harder to find. They have a limited selection and you may end up wiring one of the newer and smaller 'lytics under the chassis and leaving the old one topside for looks. Antique is on the WEB.

Try

www.tubesandmore.com

You might want to check around your town for the local electronic junk store. Most large towns have one or more. Here in Dallas we have Hardens and Nortex. Hardens had the 450V 80MFD electrolytics I was looking for to rebuild a 117X power supply for my Swan 400. The new Sprague caps fit and work great.

Now the ol' Swan 400 (circa 1964) is back on the air better than new and sounding great!

Pays to look around... WD0HCO

I've had good success with Murphy's Oil Soap. Mix the oil soap with water
and clean. Then, rinse with clear water.

Also, for sticky stuff, Goo-Gone has given me good results.

Whatever you try, try it on an inside surface FIRST!!

Good Cleaning

I thought I could use my Knight Kit Star Roamer with my Heath HX-11 for CW but find I need a better CW receiver. I am interested in buying a Heathkit Ham receiver. I am interested in Heathkit Model's:
HR-10
HR-10a
SB-300 or
SB-301

I am mostly interested in function as opposed to cosmetics as I want to operate CW.
If you have one of these models you would be willing to sell or have an opinion on their usefullness for CW work let me know.

Thanks and 73,

Bill

I have had good luck using GoJo hand cleaner. Get the plain-jane stuff
without the pumice and other flavorings. GoJo cuts the grease and
grime, doesn't hurt the paint, and cleans your hands at the same time!
That's hard to beat. Any residue can be wiped off with a wet rag.

Best Regards,

Ed

I have had great success using ArmorAll after the BA is cleaned up. It makes the knobs and other bakelite/plastic parts look like new. It will do a great job on a black wrinkle finish but be careful around the lettering. Doesn't seem to bother the paint, but as with all cleaners, be careful.

Do what you can to ease the screw if it is rusty (use a 'liquid wrench' type solvent after checking it will not harm the knob) and then take a rod or cheap screwdriver that will just fit the screw hole and file one side of the end off to form a 'D' end that just fits between the remaining screw top and the other side of the hole. It is unlikely to work, but worth the try. Drilling in place with a half broken top is iffy at best. Personally, I might saw off the shaft at the panel and mill out the screw then make a collar to re-join the shaft, but only if there was ample shaft between the switch boss and the back of the knob. Nasty!

Is there anyone out there who supplies a touchup paint for front panels for the most popular BA brands, Hallicrafters, Hammarlund, National etc. Maybe someone had it matched closely with something already on the market and could share that information!?

In article <37FBDE75.ECA69D9A@erols.com>, jeepp@erols.com says...

> Antique Electronics Supply has what you need, except for the cans. They're
> getting harder to find. They have a limited selection and you may end up
> wiring one of the newer and smaller 'lytics under the chassis and leaving
> the old one topside for looks.

They still have a fairly decent selection, though, at least for the cans that I have replaced... I've had to deviate a bit on capacity values (i.e. 60uF instead of 40uF, or tying 40uF and 20uF sections in parallel to get 60uF, etc.), but I've had good results with the receivers I've recapped so far (Hallicrafters S-38, SX-71, SX-100, National HRO-50, NC-109, SW-54).

What are also getting really hard to find are those paper-case multisection electrolytics, like you see in an S-38. Almost have to go with separate axials to do one of those (not sure I'd trust NOS on these anyway).

The SBE "orange drop" caps seem to work as well as their original Sprague counterparts. Only annoyance I've found here is that outside foil is not marked on the SBE units. But they have still worked well in whatever I've installed them in.

Another source for Sprague "orange drops" are business that cater to musicians with tube guitar amplifiers. I can't think of any offhand, but you may see some sites mentioned on alt.guitar.amps.

4451. Yaesu FL-2100B questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-07 00:00:00 UTC
From: KD5CAS@iamerica.net
Message-ID: <37fcdcb0.245059868@news.iamerica.net>
Source record: 78122

I was recently given a Yaesu FL2100B, with manual.

The ham who gave it to me said "if i remember correctly the plate choke burned up and i may or may not have replaced it. the plate meter burned up i know because the original meter exploded with the plastic dace out on the desk top. the plate choke is part of the resonant (or anti-resonant) circuit on most of those types of amplifiers. If it looks ok maybe i replaced it. just be sure you give it a good once over "

The meter has been fixed, but I don't know about the plate choke.

Here is what I have been able to determine:

1) The tubes currently in it are 811A. Yaesu specs are for 572B.
2) The plate voltage is 1200 vDC. Yaesu specs are 2400vDC.
3) The transformer was tapped at 425v. Yaesu schematic showed the tap at 850v.
4) It is wired for 117vAC supply.
5) Terminals E and R on the back of the amp must be jumpered to put the amp in transmit mode when the switch is moved from standby to operate.

(all tests below done in CW mode)

With that determined, I hooked up my XCVR, wattmeter, and dummy load. The amp put out about 140 watts with 50 watts of drive at 14.300 Mhz.

I thought that was a good sign, and decided to see about bringing the plate voltage up to 1800vDC, as several sources indicated that as the optimum voltage for the 811A tubes. This was accomplished by moving the tap on the transformer to 625v, for a plate voltage of 1,750vDC.

My initial test yielded about 210watts out with about 60 watts of drive. My dummy load is only rated for 300watts, as is my wattmeter, so I had to borrow a Bird meter and 3kw dummy load.

The next test yielded major disappointment. No RF output from the amp. Everything remained cabled up the same way. The tubes still emit relatively the same amount of light.

What should I look for?
Are there some common problems with the FL-2100B?
Is there anyway to determine if the tubes are good?

Thanks!

WE 205 E is a transmitting triode, same as 205 "D", except has lower noise charecteristics.
Specs are:

filiment 4.5 volt @ 1.6 amps

base pattern 4D

Transconductance (gM) 1.7 to 2.3 millisiemens (mS)

Round 'tennis ball' shape S-17 bulb

Was original designated as final amplifier and oscillator in WE 11A aviation transmitter (the same type as in Amelia Earhart's missing Lockheed Electra aircraft)..you don't have any old plane wreckage out back, do you ? ;o)...

Cool tube, I have a few similar ones.
Regards, Joe Pratt,
Tubecntral@aol.com

> for a creative solution) our taxes will never go down.

You are absolutely correct. However, the government needs to get rid of the stuff at the lowest cost and highest return. Does this include having to pick through a mountain of stuff to pick out the junk some ham might want? If so, more people will have to be hired. More warehouse space, etc. Because stuff like the KWM-2s (all bashed to hell) was liekly scrap, now you have to fill out all kinds of paperwork to dispose of it. Then the security officer has to inspect it. And the governmnet most likely IS NOT going to get more for the stuff at auction (for a pallet of junk KWM-2s) than it would from a scrap dealer. Or so it seems to me, having been on both sides of the equation.

>Waste
> on the scale of our government's is morally indefensible.
>
Absolutely correct, though smashing KWM-2s is small potatoes indeed in the scheme of things. I must reiterate, the PEOPLE don't buy things directly. I've never had a non-government employee come in and buy things with my budget. Congress decides how to spend the PEOPLE's money, allocating it to each government agency to fulfill their mission. If Congress decides tomorrow that every KWM-2 in the government inventory will be taken to the next CCA convention and smashed in front of the members, so be it. You have a say in who gets elected to congress, who decides how your money will be spent (generally), and the government employees decide specifically how to spend the money (within the laws) that Congress has allocated. Nowhere in there is YOU deciding how YOUR money is spent. Unfortunately, you have no choice when you write off that check to Uncle on April 15 whether it will be spent on KWM-2s or crack babies.

The general attitude here is "damn government bureaucrats who don't give a shit and it's MY money and goddamnit you'll spend it how I say". Such an attitude is sadly unrealistic, and gives short shrift to those of us "bureaucrats" who are genuinely trying to spend your hard-earned money wisely.

Be very careful around the lettering. It's better to dilute this stuff. At any rate, a toothbrush works wonders especially on wrinkle finish. It's usually worth the effort to remove the front panel so you can wax it (if it is smooth, DON'T do this on a wrinkle finsih!) and rinse all the cleaner off.

Another cleaner that disolves nicotine like magic is Westly's Bleche-White whitewall cleaner. Absolute magic. But be careful with paint, especially silk-screened lettering. Usually doesn't hurt engraved lettering. Good luck - John

You have to take the top half of the cabinet off. Then closely examine the dials. There is a sping that keeps the gears meshed. If you push against the shaft that holds the dials (which expands the spring), you should be able to tune the VFO frequency up or down without moving the dials..... Mark W4UDX

Hobbes wrote:

Apparently "realism" is accepting the fact that bureaucrats consider waste
of the public resources a proper thing to do.

Sorry, even though I recognize that the difficulties presented by *the
present
system* make it easier to destroy and discard used equipment, I will never
consider this to be wisdom, or correct policy. I'm afraid we cannot find
agreement on this issue.

This is my final post on the subject.

73,

John, K6QQ (who neither owns nor desires Collins equipment).

I want to buy tube straighteners for novars (9-pin) and compactrons (12-pin).
If you're selling, I'm buying (or trading...what do you need?).

Were these EVER MADE? I have plenty of 7/9 pin miniature straighteners, but
I've never seen these anywhere.

Please respond by email.

Regards,
Tom Mitchell

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Interesting problem.

Since you initially had half the desired voltage, I suspect that at that point the xfmr was really wired for 220v., but being fed with 110 v. (...this happened to me once)

Also a plate choke is really not that big a deal. Visually inspect it for heat or other damage; lift one end and check for continuity and resistance. If bad, replace it with whatever RF choke you can dig up, preferably a husky one.

Don't know why you now have no output. Again a visual inspection, perhaps with a big magnifying glass, may reveal something.

Good luck, and keep us posted when you learn what the problem was.

The only suggestion I have is to drill a small hole on the thread side of the half-moon that is left and drill down to expose the half-moon. Made a small tool with a slot which will slip on the half-moon and twist it out. Soak it well with WD-40 before trying.

At least that is what I would try.

Joe

For sale:

Collins 180U-2 antenna tuner, removed from KWT-6 HF station.
Original condition, as-removed from the KWT-6 (by me). This
is an L-type tuner with a very nice Johnson roller coil with
a smooth vernier, along with a combination of fixed and air
variable capacitors. Selectable high-Z and low-Z modes. The
input and output connectors are Type N, but they can easily
be changed to SO-239 without hacking or drilling. The unit
is in good shape with minor wear. Could use light cleaning.
Insides look to be in great shape. Cabinet is bare aluminum
(would look nice if painted with black wrinkle-finish paint).
Price is $65.00 plus shipping.

For those of you who are familiar with the KWT-6... this is
the ATU only (I'm keeping the Wattmeter / speaker unit).

73,
Dean / K5DH

I am sure I have some knobs for you.

To clean them, go to your local K-Mart and pick up some "Blue Magic"
metal polish in the automotive section. Apply then put on buffing
wheel at about 1K RPM. Works great.

>Get a pair of 8122 tubes, tested pulls for only $100.
>73 Chris VE3NGW/W4 Florida

Hello Chris:

I am surprised that the reasonably priced 8122's have remained unclaimed for so long. These tubes are pretty difficult to find these days. About 3 or 4 years ago, I went on a scrounging spree and located 7 of them for future use with my NCL-2000.

The only problem with using them in the National is the requirement that the tubes be closely matched pairs. This is a very tight requirement for the National, as there is no way to balance the tubes in the "stock" amplifier and it is very easy to have one tube working like all-get-out, and the other one loafing along. This causes the overworked one to fail in pretty quick order.

A good mod would be to make the bias supply independently adjustable on both tubes so that they may be controlled and balanced individually. That would solve the requirement for the tubes to be so closely matched, and would allow the use of "any old pair of 8122's" and they would give a lifetime of service.

All the best from VE Land.....where it's starting to get cold......need a house guest in Florida?

4525. HB QRP amps for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-09 00:00:00 UTC
From: zeitler@attglobal.net
Message-ID: <37ff9390_1@news1.prserv.net>
Source record: 78064
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

1. All solid state QRP amp. A pseudo copy of the infamous ARRL Handbook design. 5 watts in gives 100 watts out, 80 to 10 meters. Runs a pair of TRW PT-9776s. Sold as-is, untested. Previous owner built it and used it. No schematic. Said it worked fine. Cautiously priced at $25 shipped.

2. Also from same fella is a HB QRP amp that uses three 6146 tubes in parallel. Generic Handbook design. 4 to 5 watts in gives about 200 watts out. Seperate power supply and RF deck. Comes with three tubes. Looks very nice. Built well. Even if it does not work there is not much to troubleshooting this. No schematic though. Sell for $45 plus shipping. Weighs abt 35 pounds total.

4526. FS Ant Tuner (choice) MN-4; AT 1200

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-09 00:00:00 UTC
From: Mike Souhrada <wb9iog@revealed.net>
Message-ID: <37FF999D.5725@revealed.net>
Source record: 78065

I ended up with two really nice antenna tuners.
Only need one-will sell one and keep the other.
Here's the choice.
1. Drake MN 4 -300 watt class ;80-10 has wattmeter/swr
meter built in. 8 position switch for direct,alternate
and the ham bands with two positions for 80 meters.
Direct,Alternate,80A,80B,40,20,15,10
2. Amp Supply AT 1200 -900 watt class and claims 1,200 PEP
160-10 with swr meter only (lighted 12 vdc not supplied)
The meter is switched for fwd/reflected and has a set
pot for the SWR reading.
12 position switch for 160 through 10-just about any band
you'd need.
160,160,10,15,20,30,40,75,80,80,E & F (catchalls I guess)
Inputs:Bypass,direct,Coax 1-2-3-4,stub for long wire.
(4 & the stub are tied-Set up for a balun but NOT included.)

Both units would be mint save a few minor scuffs/scratches.
Price is $125 either unit +shipping UPS-I keep the one not sold.
Either unit is far superior in construction to the current "popular"
tuner line.

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $2,750.00 unpacked.

I have a few tested and Guaranteed 4CX3000A tubes at $750.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site

If you need more info please contact me.

hello,

i just aquired a 6m portable rig made by national. it is an fm/am rig
and the output power is probably qrp. the rig has a collapseable antenna on the
face in the upper left hand corner and a circular s meter. coverage is
50-54mhz. i imagine the fm is strictly simplex. there is an internal battery
tray for nine c size batteries. there is also a 259 in the rear of the radio
with a cover.

does anyone have any info on this rig? maybe a manual?

any help is appreciated.

I ahve one Kenwood TW-4100A Dual Band mobile radio. This unit covers 2 and 440 with about 40 watts on VHF and 30 watts on UHF. This unit does not go out of band so the receivers have nice sensitivity with little intermod. Unit comes with the manual. Asking $200.00 + shipping. Please respond via e-mail.

Matt

4539. FS:Plate Modulated AM Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-09 00:00:00 UTC
From: Matt <matt371@jersey.net>
Message-ID: <37FFE156.61B40777@jersey.net>
Source record: 78078
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I don't know who made this transmitter or when it was made but it's been reconditioned and is in nice condition. It consists of three rack mount units in a 19" cabinet. The top module is the VFO / Exciter / Amplifier which covers 10-80 meters and uses an 813 as a final amplifier. The second module is the modulator that utilizes a pairof 572B's. The last unit is the power supply which has been converted to solid state rectfiers. It was mostly used for 40 and 80 AM where it produces most of its power (about 300-450 watts) but it will work good on all of the other bands. Asking $900.00.
If you are interested , I also have an audio processor that was used with this transmitter. It's a Dorough DAP-610 3 band AGC / limiter with digital control. With a good mic and mic processor, the DAP-610 gives you that LOUD broadcast sound on AM. I'm asking $400.00 for the DAP-610.

Please respond via e-mail

Sorry folks I said eight 811A's I meant FOUR. What was I thinking ?
-------- Original Message --------
Subject: FS: Collins 30L-1 Amplifiers
Date: Sat, 09 Oct 1999 19:51:09 -0400
From: Matt <matt371@jersey.net>
Newsgroups: rec.radio.swap

I have two 30L-1 amplifiers for sale. This model amplifier uses 4
811-A's to produce about 900 watts PEP on 10-80 meters. Both units are
in nice shape and in working order. About a 9 out of 10 in looks. One
unit has a small scratch on the top, otherwise they are in great shape.
I'm asking $300.00 each + shipping.

Matt

4542. FS: APS-104 radar modulator (last one!)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-09 00:00:00 UTC
From: wor81ley@snow81hill.com
Message-ID: <38001185.2760@snow81hill.com>
Source record: 78081

I have just one mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1950s/60s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Unit itself weighs 78 lbs and will fit in a car. Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the two "81"s to leave "worley" and "snowhill" in my email or call 334-347-5281.

jeff, i'll tell you where i've been, all over the country digging up ba's and selling them on e-bay to people just like you.i was making reference to dennis c. o'conners (k8d0) statement "ebay hustlers" see oct.7 posting. here's what's really ironic. every ba i've sold on e-bay i've sold to a ham and i've sold lots. every time i come on this news group, i read gripe after gripe about e-bay, and how "those guys" are ripping off the hams. "QUIT BUYING!" hams have to learn to separate the hobby from the product. we are taught capitalism upon leaving the womb,but for some strange reason hams are supposed to be immune,no one else just hams! give me a break!

Does anybody out there know where I might find a replacement chain type of tuning belt for the RF Communications RF-302 Antenna Coupler. This looks like a key chain or pull switch chain but slightly smaller in thickness and does not have the coupling link.
Would consider any ideas on some kind of replacement belt instead of the chain. Or some way to repair the broken chain. Any help would be appreciated. Thanks and 73's Don KB6GQA

I have a pair of these things on E-Bay....with asking bid of
$3 plus postage....these are the ones that screw into a light bulb
socket to limit the current during startup on Hi Voltage supplies..
if any of you guys still have light bulbs in your supplies these
are what you are really supposed to use.....so its either they get
a bid.....or they go into the trash can.....

Hi All,

I have for sale, Radio Engineer's Handbook, by Frederick Terman, 1943.
This copy is in good condition, 7.5 out of 10. Binding is very good,
covers are very good,
but there is "softness" on the corners of the covers (slightly dog-eared).
I'm asking $15.,
including shipping in North America.

73,

Ed

4581. WTB "Broken" HF amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-10 00:00:00 UTC
From: Matt Erickson <kk5dr@hotmail.com>
Message-ID: <3800B131.9B78780D@hotmail.com>
Source record: 77998

I'm still looking for a winter project. I want a "broken", burnt-out, hit-by-lightening, etc. HF console, or 2 piece amp, ie. Henry, BTI, Drake L7, amp supply LK-550.
The unit does not have to even have tubes in it. It can look very rough or dirty. I'm mainly concerned with the cabinet being intact and the RF tank circuit. it need not have a power supply in it. I'm going to rebuild the entire amp, but I need the basic hardware to start with. Send me a message, let me know what you have, and we'll work out a deal.

Three boxes (approx. 16"x16"x16") of all kinds of tubes, sorted by number, some new tv, lots of receiving pulls, loctal, octal, antique (I guess they are all antiques, I must be getting older), transmitting (6146, 2E26, 1625 etc) nixi, some of them your guess is as good as mine what they are. This is basically a 40 year collection of spares and since I have sold all of my "radios that glow in the dark" (except for a Swan 500C and accessories which is still for sale) I won't need them and someone out there maybe can use them.

$50 obo. Pick-up ONLY in southern california. Dan WA6PXO

4586. Teledyne solid state tube replacements ID help.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-10 00:00:00 UTC
From: Randy and Cara Randall <crrandal@seidata.com>
Message-ID: <3800C5C6.8C92AC50@seidata.com>
Source record: 78003
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes

I found two TRW solid state tube replacement modules.
I think they came from a VTVM and are used in place
of the 12AX7 and the dual diode I think is a 6AL5?
Here are the numbers on the modules: TR1002
and TR1119. If I remember correctly Heathkit
sold these in the late 70's to eliminate warm-up
drift and calibration changes. What are they?
Am I correct or if not, what tubes do they
sub for?

Thanks,
Randy.

Hi,
Used one of these transceivers in 70,71 when it was brand new at G3VZI,
club station of North Staffs Polytecnic. Used in conjunction with the KW1000
linear and a Mosley Mustang 3 ele beam at 100 ft above ground level, it put out
a very good signal. Worked the world with it and always look back fondly at that
beautiful station.

Regards,
Simon Collinge KF2HO EX G8DRR

OK guys, I found a few more transformers which may be of interest:

Modulator-Driver / Audio-Driver Transformer
Thordarson Multimatch Type T-15D85
Rated for +22 dB
Dimensions 3" X 3" X 3.25" tall. Above chassis mounting. Has
classic black wrinkle finished case. Mounting with four holes on 2.5"
centers.
Will sell for $40.00

= = = = =

Plate transformers:

1) Thordarson TS-24-R-04
Plate transformer: 120V AC primary
SEC 1: 700V CT at 100 mA
SEC 2: 6.3V CT at 3A
SEC 3: 5.0V at 3A
Size 3.5" X 3.0" X 4" tall.
Drop-through mounting with four #10 screws at
2-3/8" X 2-7/8" centers.
Use as a replacement or great for Glowbug project transmitter
or receiver! Will sell for $12.00 plus shipping

2) Stancor A-4763
Primary 115/120V or 230/240V AC
SEC 1: 270 V CT at 100mA
SEC 2: 200 V CT at 60mA
Dimensions: 3.5" X 3.5" X 3.0"
Black end bells. Above chassis mounting
Will sell for $12.00

3) STANCOR S-6314
Primary 115V AC
Secondaries
SEC 1: 760V CT at 120mA
SEC 2: 6.3V at 6A
SEC 3: 5V CT at 8A
Dimensions: 4.5" X 3.75" X 4.25" tall
Drop-through mounting with four #10 screws on 3.0"
and 3.75" centers. Will sell for $16.00

= = = = =

UTC S-62 filament transformer
Primary 105/115V AC

Secondary 10V CT at 5 Amps
Dimensions: 4.5" X 3.0" X 4.25" Tall
Gray wrinkle painted finish. Above chassis
mounting with four holes on 2.5" and 3-7/8" centers
Will sell for $15.00

= = = = =

10V at 10 Amps (S) $23.50

= = = = =

Heater transformer
120V AC primary
Sec 10V at 3 Amps $11.00

= = = = =

Heater transformer
120V AC primary
Sec 5V at 3 Amps $11.00

Have a good condition shock mount
for the BC-342, BC-312 or BC-314.

I will trade it for an AN/ARC-5 MT-64 three receiver shock mount
(note: NOT the 3 receiver rack- the shock mount)
in like or better condition and for that shock mount only.
No other offers, please.

Kind Regards,
David Stinson

Hello Radiomatt,

I'd suggest you include the URL next time. My eBay search using
HRO-600 did not turn up anything....for that matter, CV591 did not
get any results either.

thanks,
Phil

I have a Collins SM-3 desk mic surplus to my needs. It has a Heil
element in it as the original one went "west". The tube has been
repainted (correct color) and there is a difficult to notice scuff on
one side (about an inch long) on the outer periphery of the base.
Beyond that, its in really fine condition, including the coiled cord and
PL-68.
Asking $295 plus $5.00 for pack/ship.
Thanks.

Looking for ART-13 and/or T-195B

4614. FS: Kenwood VOX-3 vox unit $50.00 shipped

I am missing the point with the diode. I believe that the impedance of a diode is about 20 ohms or less, and the forward voltage drop is only about 700 mV. So how does a diode limit inrush current?

Hi Lane -

My guess is that you found the filter you want already,
I just lost track of everything during my move. I am a
professor now, and settling in slowly. Can't lay my hands
on the filter from here yet (probably in a box in storage)
but if you are slowly thinking about the project, let me know
and I can keep it in mind.

I got up an antenna and can be found on 3840 again on occasion.
Probably not loud (invisible inverted L) but the guys do hear
me.

Hello all -

I'm looking for a reasonably priced good condition Conar 500
receiver. I have the matching Conar 400 transmitter and want
to put the 'twins' on the air.

If you have one for sale, please email condition and price. I'm not
after 'collector quality' - just good condition and working. I plan to USE
it - not sit and look at it!

Thanks,

Dave WB7AWK
http://www.boatanchors.com (click on 'new stuff' to see the 400 transmitter)

4645. DX160 vs DX120

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-11 00:00:00 UTC
From: pv <verrando@airmail.net>
Message-ID: <D8C6928CBEBDC34A.6A96180FD544F2DD.E771B163D5EE7D5E@lp.airnews.net>
Source record: 77960

The DX120 is predecessor of the Realistic DX 160 and 150.
Can anyone tell me if there was any significant circuit
design differences between these two realistic radios?
Thanks! Pete

4646. Re: DX160 vs DX120

A friend gave me an old Raytheon Ray-Tel TWR-2 CB radio this past weekend. It's in decent shape, but doesn't work (the tube filaments light up, but that's it). Since I work for Raytheon, I thought it might be fun to try to restore it to working condition, just for grins. So... does anyone have any information on that model? Owner's manual? Service manual? Sams Photofacts? Anything of interest?

73,
Dean / K5DH

4650. Re: e-bay hustlers!

Hmmm, cast your bread on the water and you are never sure what will return....

I've been watching with great amusement the aangst and protestations over my simple statement... It was made about cleaning a cabinet and I commented (from memory) that "many of the hustlers on ebay use Simple Green...", etc...

Interestingly, it was just a comment and was not intended in the pejorative sense of the word, though it seems to have been taken that way... Oh well, if you "hustlers" can't take the heat then get out of the kitchen...

Cheers ... Denny

From: James Skalski <jskalski@localnet.com>
Message-ID: <38020D07.E8AED16D@localnet.com>
Source record: 77968

I have some transformers for sale.

Primary 3 taps
1-2 4.3VRMS
1-3 115VRMS

Secondary 4 taps
4-5 865VRMS @ .3A
4-6 930VRMS @ .3A
4-7 1000VRMS @ .3A

There are two of these and they could be wired with primaries in series
for double voltage on primary
Or parallel the secondary for 0.6A current rating.

Price is $20 each plus postage

Second transformer is a new Hammond

208 primary and 24V secondary @ 350VA rating
$12 plus postage.

Hello
I have for sale two items.
First is a case for the Hammarlund HQ 180 receiver. The
case is in fair shape, no dents , but some rust marks and
would be best to be repainted. Price is $$45.00 plus
shipping.

Second item is a JT-30 mic. Mic is in nice shape , has
a few scratches but not bad at all for as old as it is.
No stand.. Price $40.00 plus shipping..
Thanks tim

>The DX120 is predecessor of the Realistic DX 160 and 150.
>Can anyone tell me if there was any significant circuit
>design differences between these two realistic radios?

The DX-120 is a completely different, at least looking, receiver from
the DX-150/160. I would imagine that it's pretty much your garden
variety solid state 455KHz single conversion circuit, much the same as
the DX-150. But not ever having owned a '120, I can't really speak to
the specific circuit details. If it were similar to either the '150
or the '160, it would have to be the '150, due to the missing LW
coverage.

The differences between the DX-150 and DX-160 include: LW coverage,
an FET front end, and an external speaker on the '160. Also note
that there were two revisions to the DX-150, the '150A and the '150B.
I'm not certain of all of the differences here, apart from the '150B
having an external speaker (note that the model number of the speaker
is SP-150, not SP-160), and one of the revisions included a product
detector for SSB, but I can't remember of this was the "A" or the "B"
offhand. Osterman's guide would probably have the answer. I think
also that the '150B introduced the FET front end that replaced the
bipolar front ends on the earlier versions.

C.K.

> One was available with a separate matching speaker, they looked techie
> but not really practical. Unstable BFO, drift etc

Acceptable enough for general SW listening, though, which is really what I think they were marketed for, clearly not as a serious choice for an amateur station. But it was a widely available and affordably priced line of receivers in the 1970s, and they seem to have sold well, considering the number of used ones we see on the market now.

My DX-160 is a bit on the drifty side when warming up, but works well once it has. The LW coverage is fairly sensitive, and one other thing I've liked about this radio is its sensitivity on the highest band (12-30MHz or so). A lot of inexpensive general coverage receivers, particularly tube models, tend to wimp out on the high end of coverage, but the '160 does quite a respectable job here, at least mine does. Sensitivity is good on the MW band as well. Images are a bit of a problem in the 4-12 MHz range, and the audio quality is a bit pedestrian (though there are mods available that are supposed to improve it, increasing the size of a couple of coupling capacitors in the audio stages). The audio is considerably better than on the higher-priced (and, for some strange reason, more highly sought-after) DX-300/302, however.

I also have a DX-150 in really nice condition, but I don't really use it much, since I already have the '160. I do have the original box and owner's manual for it, though, which is neat.

C.K.

Ok, Ok, I know it's a CB, but it's certainly a boatanchor also. WHat I'm looking for ideally is a replacement faceplate. Mine is beutiful except that someone put a big oval hole where the nameplate should be for a slide switch of some type. What I'd like to find, if not a whole face, is at least the Sonar script that should be on the front. I'm guessing it should be around 2" or so long, and maybe 3/4" tall at best, but I'm guessing, as I don't have the part here. I can disguise some of the damage, and with the script it would cover it pretty well. It'll be just for my own collection of junkers, so I've got no plans on auctioning this old relic off. It works too well for that. Any help is very much appreciated Tnx!!

Y'know, for the price, not a bad radio at all. Quite sensitive; rumored to be some radio-to-radio variation. My elmer (Felix, W6QA, SK) was a real CW hound and enjoyed his HW16/HG10 VFO/DX150 receiver; told us (my dad the $$guy and me, a new ham) that we'd be happy with its bang-for-the-buck. With just a bit of hookup wire for an antenna, picked up ham & SW BC stations around the world which was a nice eye-opener for a 7th-grader in 1976.

Frankly, a lot more quiet re: bkrd noise than many of the newer synthesized radios. I know several hams that bought the new DX300(?) digital-display radios that returned 'em and went back to their DX160Bs.

Radio Shack returned with an analog dual-dial (main + bandspread) radio, after their digital radio debacle, in late 70s/early 80s. Can't remember it's model # but might've been a rehashed DX160....

Drift on mine wasn't too bad but you wouldn't want it on PSK31, either :-) After 10-15 mins. warmup it settled down OK.

Addition of a crystal standard ("calibrator") would've been nice so bandspread dial would've been on-the-nose on the ham bands w/o a lot of fiddling.

A little more care in production alignment, addition of a calibrator and filters and it would have been quite nice. Adding some weight to the radio - as it had a tendency to slide around, being lightweight, and a fully shielded cabinet (blocking strong local AM BC stations from climbing in) into would've been nice too.

Prob. not a great pileup rig :-) but then lots of people have used far worse, too. I still have my 160B; the decal lettering on the front panel has worn away but the dial cord is fine. Should fix it up and fire it up someday, but too busy now esp. as I have an FRG-7 and FRG-100.

There you will find loads of projects documented projects including antennas, transmitters, receivers, PSUs and many many usefull circuits. PCB foil patterns are included for many projects and there are even photograph illustrations of the more recent projects.

I have recently included loads of freeware and shareware software packages for PCB drafting in the DOWNLOADS section. All the more recent PCB component layouts and PCB-foils are in BMP format so that everyone can read and print them (they are zipped).

Amongst the more recent projects added to the page are:
- TBA120 NBFM receiver - 100KHz to 100MHz, change two coils & crystal.
- Simple 4-watt AF amplifier - much better than the LM380.
- Extending the Balcony Antenna using Fractal & Meander principles.
- VHF digital direction finding system.

The site is well worth a visit. I hope you have fun - Harry SM0VPO

4685. Download problems

Newsgroup: rec.radio.amateur.boatanchors

I have had loads of E-mail because the DOWNLOAD pages frequently give the error message FORBIDDEN when trying to get a ZIPped PCB foil pattern or datasheet from my homepage. Harry's Homebrew Homepage is lcated at:

http://sm0vpo.8m.com/
http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo

The Passagen and Xoom sites (for Europe and the far East) have recently added banners to the INDEX file. When you click on another site (example http://sm0vpo.8m.com) then these servers import the files to their own server. Great! it's all free, but if you try to download a PCB foil pattern ZIP file you are accessing the site from an external site! This results in the message FORBIDDEN!!

If you want the PCB foils then copy (Ctrl+C) the URL and paste into the ADDRESS panel of your browser (Ctrl+V) and it will load the original site. You can then download to your hearts content.

I hope you have fun - Harry SM0VPO

4694. Using 4CX350B's in place of 4CX250B's...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-12 00:00:00 UTC
From: staylor@lucent.COM
Message-ID: <453B16902112D211AAC400805F9FE7D301EA17D4@NJ0117EXCH003U>
Source record: 77865

4CX350A's cannot take any grid current.The tubes are rated for class AB1 service only. Therefore, any circuit that drives them into grid conduction will destroy the tubes. Unlike the 4CX250 family, the 4CX350A cannot run class C FM, CW, AM or AB2 or class B for that matter.The tube was designed by Eimac for use in military amplifiers that required extremely low intermod and high linearity. Run them AB1 and you're OK. Check 4CX350A data sheets. Don't use 4CX250A values though.
In summary, no ,the 4CX350 is NOT a direct sub for the 250.

Beautiful unrestored Hallicrafters receiver. . These receivers saw extensive wartime use . I got this receiver at a local hamfest. Was obviously well taken care of. There is no sign of any modification being done and no sign of damage. I do not know if it is operational because the power cord has no plug. . I do not have the time to restore this beautiful radio.

sez it all......

If I may add - this IS a true story... went to small hamfest out in Ardmore OK about 20 years ago. An old ham had a mint SX-28 on his table. He wanted $100. Two hours later, he changed the sign to $75. An hour later he changed it to $50. Two hours later he changed it to $25.

At the end of the hamfest - he packed a lot of stuff up but he just left the SX-28 and a box of old QST's from the '30's on the table.

At the time, I was pretty pissed at that as a bunch of hams were doing the same and the hamfest committee had to clean up the Armory and throw all that junk away. Much of it was pretty heavy.

A local ham came up with an idea that since the hamfest was winding down and the SX-28 was "donated", lets take it out to the parking lot outside and have some real fun...

We did and he brought out an extension chord and plugged it in. I tuned it up to a local AM broadcast station and he came back from his pickup truck carrying a wooden bat. A quick announcement was made that for .25 cents you can get one swing at the SX. We probably collected about 75 cents and stopped, the line was getting to long.

The SX-28 took about 8 good hits but kept right on playing. The 9th whack found its way to the power transformer which produced a shower of sparks and that nice acrid smoke announcing death. It look for a second that the halli would shake that one off too, but then the sound stopped and the tubes when dark.

I unplugged it as guys started jumping up on case - stomping it down and a few tried to kick it across the parking lot. I am proud to report that even in death - the SX- got even as one idiot badly stubbed his toe. Someone came with a 15 pound sledge and finished the job good and proper.

After everyone had their fun - they left to go inside and I was left to clean up the parking lot. I flipped the old girl into the dumpster and spent close to a hour for small parts - then I left.

=> This part I don't know if true - but was told that it was...

The old ham came back 3 hours later and asked if anyone seen his SX-28. He accidentally left it behind.

I was told, the remaining members of the hamfest cleanup committee were laughing for hours after he left.

The best way to keep old equipment alive is to keep the value of it UP as high as someone is willing to pay for it. As I see it the more the item is able to bring the more of them will survive.....Who ever thought a 75A4 woulg bring $1500.

4705. WTB: Understanding Amateur Radio by ARRL

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-12 00:00:00 UTC
From: Seeking Wisdom <cliffkot@interaccess.com>
Message-ID: <s06s90iph1s44@corp.supernews.com>
Source record: 77876

I'm looking for a decent copy of Understading Amateur Radio published by the ARRL in the late 60's. It originally cost $2.00 or $2.50 and was printed in the old 6.5 by 9.5 inch format with the red and black cover and photo.

Thanks

Cliff WA9YXG

This would notbe that hard of a receiver to restore, as the front panel is etched rather than being wrinkle paint. Also the lettering is engraved so re-lettering is not a problem. But some knucklehead thinks it's worth $152.50 as of this writing. Way too much. BTW I went to an antique radio auction in PA last winter and some hillbilly bid up a rusty, beat-to-hell SX28 that had no original knobs to $250. Hope he enjoys it...

Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday ... The Seasons LAST...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday, October 17th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

4730. Anyone want a modulation xfmr?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-13 00:00:00 UTC
From: Arthur Sowers <arthures@magpage.com>
Message-ID: <7u0sh0$9va$0@204.179.92.50>
Source record: 77901

An old AM modulator came into my hands years ago, from someone into his hands it came, from someone else...etc., etc.

It is actually two modulators (looks like a combination from an old ARRL handbook). One has one of those CVM-3 (or something) hermetically sealed 300 watt level multimatch transformers driven by two 811a in push pull. The other has one of those 120 watt multimatch xfmrs (driven by two 6146s). They are on one steel chasis, with a steel black crackle hammertone front panel, and steel side reinforcements. None of the tubes are present (I think something like 6SL7s were speech amp tubes and something like 6A4s or 6AB4s (octal) modulator drivers (all transformer coupled, by the way), but all or most of the circuitry is there and not too much rust or corrosion last time I looked. I have never had B+ on any of it and can't vouch for the xfrmrs. I want to take the 120 watt xfmr out of the unit (and make a small plate modulator for a 6146 homebrew xmtr) and dispose of the rest of it, either intact or part out the 300 w modulation xfrmr. Its all fairly heavy, but if anyone is interested in the large xfrmr with or without the chasis (it will save you drilling tons of holes, and I don't think you want to put that big xfrmr on an aluminum chasis), let me know. I'll ask for shipping costs and something for bundling, boxing, and hauling to a UPS pickup point unless you want it and you are driving distance to the DelMarVa area (Delaware-MD Eastern Shore).

(use email for reply please, if you want a faster response)

This coming Sunday ... The Seasons LAST....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday, October 17th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

The seller concedes that the radio was originally painted black, but
was painted gray by the Navy. That does not surprise me. In fact, it
is almost expected.

The Navy never had SX-28s! Besides, during WW2 when SX-28s were used by the military, even Navy equipment was black wrinkle...

This reminds me of my military version of the National HRO, labelled RC-105 which was originally "battleship grey", which the previous owner didn't like and handpainted the whole case black!

I got an SX-28 recently which was nicely restored and looks almost new. It's one of the best-sounding, easy-as-velvet bandcruising receivers I ever used (besides the great art-deco looks)! It was the first "real professional" HF receiver I ever saw when I was a teenager.

From: oldgear@aol.com
Message-ID: <19991013102012.01048.00000627@ng-cr1.aol.com>
Source record: 77909

An assortment of approx. 70 Crystals in a FT-241-A Holder Complete with a heavy duty carring case. The frequencies range from 24.5 through 38.9 with some skips. 10 meters is well represented from 28.1 to 29.6 in 100 Mhz steps. These should work well for CW use. The shipping weight would be 5-6 Lb. I am open to a cash or trade offer for electronic or computer gear.

Thanks
EJ (KC5EPI)

4739. WTD: AN/GRC-14 Radio Set

Newsgroup: rec.radio.amateur.boatanchors

Hello All:

I am looking for an AN/GRC-14 radio set. I used to have one when I lived in Pensacola, FL in 1988. But because I was in the Navy and shipping out to Japan I ended up "giving" it away. Now after years of regret, I would like to find another one.
The unit I had was almost complete, I was missing one receiver. It had the power supply, transmitter, two receivers (I had only one), and the modules (phone/RTTY).
As I clearly remember, it is VERY heavy.

If anyone knows where I can find one or knows someone who has one, please e-mail me directly: n3yyp@arrl.net

Thanks,

Clifford W. Owen

Source record: 77911

Hi,
These FT241 xtals are not meant to be used for normal transmitter for HF, because the fundamental frequency is divided by 54 for black color and 72 for red color case. Most of the frequencies are in the neighborhood of 400 to 600 KHZ. But it can be used as a BFO crystal for 455 KHZ IF radios. For example, Channel 45, 24.5 MHZ is actually a 453.70 KHZ LSB BFO crystal.
Good luck to you.

Message-ID: <3804F1B8.196BBB94@roanoke.infi.net>
Source record: 77925

Picked up a very clean/working TMC receiver with the associated
SSB adapter--both are ex-Navy and both came with the manuals. Only
problem is that when surplused the data plates were removed. I know that
R-390 repros are out there, any one have a source for TMC plates?
Never even seen these other than in pix---are they rare? and finally,
the question everyone asks---ballpark value for one or both?

The receiver is a GPR-90RXD .54---31.0 MC general coverage--also has
space for 10 crystal controled channels--neat set!

The SSB adapter is a MSR-5 "Mode Selecting Receiving"---very elaborate

Thanks for any and all info---e-mail as well as post please.
Thanks, Craig

Jeff:

I've got some octal based clear glass (GT sized or slightly smaller))
'ballast lamps' somewhere? Maybe 5 or 6?

I'll dig them out and send you the number, also I'll measure the
resistance (cold).

I suspect they are 'iron filament' units used in a manner similar to the
detailed reply you received.

I also suspect the 'filament' will be on pins 2 and 7? Whether would be
suitable for you don't know?

I'll be in touch.

Source record: 77930

Hi Sam,
It has been a lot of years since I was a Tektronix design engineer, but
I can help you isolate some of what may be keeping your 544 from working
properly. Have you tried shorting the two pins on the CRT that control
the vertical plates together? If the vertical amplifier has a bad tube or
some other problem that is causing the beam to be off screen, shorting the
two pins (of one axis) will center it. The same process can be then tried on

the horizontal plates to test the sweep circuitry. I'm assuming that the
High Voltage supplies are working, since you get some light on the screen.
If
things center up (make sure you don't leave a bright spot immobile on
the screen and burn it) you will need to find the stage that is defective.
In order to further trouble shoot the vertical and horizontal amplifiers
in the main frame you really ought to find a manual. However with a tube
guide in one hand and a well insulated lead with two clips in the other you
should be able to work backward from the CRT on both channels to find the
stage
beyond which all is balanced. Then try replacing the tubes in that
stage. (both sides of the amplifier are the same tube) Work first on the
plate
and then on the grid of the same stage.
Please be careful while poking around as these old scopes had 350 volt
supplies that can supply a couple of hundred milliamps, more than enough
to cause involuntary motion.
Good luck,.....Larry in Seattle

Anyone out there with a working HT-33B? Just curious...it was one heck of an amp in its time, especially if you put 140 volts into the primary of the plate transformer as we did in Alaska.

4761. It won't make Stevie Wonder smile - but my latest addition makes me - smile that is!

Newsgroup: rec.radio.amateur.boatanchors

Source record: 77793

Tonight a friends' dad was getting rid of a lot of his electronic stuff, and in the modest first pile was a set of headphones made by Northern Electric. I tried but to no avail to identify these. Maybe someone in the group can. On both pieces is marked in caps; NORTHERN ELECTRIC CO. LIMITED, then PATENTED 1931, and the number 528. Any ideas on the age and so forth?

Also, the cotton insulated wires that go to each ear piece are worn and frayed (this is about the only part that is worn). Where would I find a supplier of such conductor? This head set looks so old that at the split in the cord that goes to each ear piece, the junction is hand wrapped with cotton cord. I guess this was done at the factory.

Many thanks for any help

William

Does anybody out there have a Service Manual for an IFR 1000 Service Monitor with a serial number lower than 200 or so. I have an original one that I purchased but it is from a unit with a high number and many of the parts are different. Will gladly trade or will purchase the older unit manual. Will also be happy with copies of the different areas.
Please let me know if you can help via E-Mail. Thanks and 73's Don KB6GQA

Have:

Drake TR4Cw (not RIT) new finals, new driver, power supply, MS-4
recent alignment (actually on the bench now and about half way through
:-),
nice looking, ratty manual, does not have 'blue' dial, just the plain
old
original white. Will put photos up at
http://www.debris.org/radio/swaps/drake
but proably not until the weekend.

Swap for:

Drake TR7(A), power supply, PS-7. Plain old TR7 must have filters
of the 'A'
-or-
Signal One CX7, A, or B or later model Signal One (will take inop
on later model or kick in some bux if it's working)
-or-
apply as partial swap towards National NTX-30 if anyone has and
wants a TR4Cw badly.
-or-
SW-5
-or-
other pre-WW2 stuff I haven't had before
-or-
?????

-bob

I blew mine up years ago. Power transformer. When it went it sounded like someone had a machine gun. It was my fault as I decided to get into a contest and was working them left and right, for about 3 hours solid. However I forgot that I placed some stuff on top of the amp cutting of the air flow. I got rid of it. I sure would like to find another as I still have about a dozen PL-172s. 73 - Mike

> Anybody know what these are?

They're near impossible to get. What you have is called a Beam-X switch, manufactured by Burroughs in the early 60's. It's the counter that drives the Nixie (also a Burroughs TM) readout tube in the days before high-speed counting ICs. The Beam-X (or sometimes called a Trochotron) operates on the principle that electrons follow trochoidal paths under the influence of a uniform electric and magnetic field, forming a cycloid with sharp cusps. Of course, there's a lot more to it than pure physics and you can read about it in Millman & Taub's _Pulse,_Digital,_and_Switching_Waveforms_ textbook, copyright 1965 by McGraw-Hill.

There was another interesting counter -and- display tube that employed gas ionization where the glowing plasma would surround one of ten anode pins. However, due to the plasma deionization time, it was limited to the 100's of KHz counting region. They enjoyed a limited market life due to cost and rapid advances in solid state technology.

Well, you asked what time it was and I told you how to build a watch. :^)

I have a AMP SUPPLY LK-500-ZB for sale.
This amp has a pair of 3-500Z's (EIMAC) with 3200 volts on the plates.
This amp also has the Peter Dahl high voltage transformer as well as the
Peter Dahl filament transformer.
I can e-mail 4 or 5 hi-res pic's of the amp inside and out on request.
This amp , condition wise is a 9 on a scale from 1 to 10.
I also have the original manual.

$825 plus shipping

Please reply to pab1@home.com

If you want a nice one, I know a thrift shop selling one in south central NJ for $250. So far as I can tell, it's got all the original knobs, and it looks to be in very nice shape. The guyt was willing to go get it off the shelf and hook it up for me. I didn't have the cash, so I told him that I was just asking for a friend. He's also got an onld Atwater Kent (model 20? 24? don't remember) rig that looks like a long rectangular wooden box. It's black, and it has a bunch of knobs. If I saw a pic, I could confirm the model #, but I know it's 20something. If anyone wants more info on where it's at, email me, and I'll let you know. I'd rather see that old radio (both of them) in someone's home to be appreciated, rather than in that window. I'd buy them, but I don't really have the cash to spend.

Source record: 77820

Harris RF-2305 Receiver/Exciter. 10 electrically, 9+ cosmetically. Incredible up-conversion receiver. Digital Mechanical VFO somewhat like a Collins R390 but controlled with pushbuttons instead of a tuning dial. Modes of operation: AM,LSB,USB,CW,RTTY,FAX. Frequency coverage from 10kc. to 29.999 kc. RX and TX from 1.5 through 30MHZ, possibly modified to TX lower. PLEASE NOTE: THIS RADIO DOES NOT HAVE A NOISE BLANKER! I have the original hand held Harris microphone and full factory manual.Also includes TX/RX relay for tranceive operation. Originally purchased by the U.S. and Canadian governments for point to point embassy, forestry communication etc. power outout approx. 5 watts. Original cost from Harris in 1984 approx. $12,500.00 I'm asking $450.00 US plus shipping which is a fair price for a RX/TX of this performance. Will consider trades for ???? what-have-you. 73 and thank you for reading this message. (yardleyite@aol.com)

Hey Gang:

Starting this Saturday evening at 7:30 Eastern Daylight Time (2330Z) a new weekly radio show will debut on WBCQ The Planet which broadcasts on 7415 Kilocycles. It will focus on tube-type radio communication equipment discussions, interviews, guests, tapes from the past, ham radio music & folklore, great tunes from the 70s and 80s, the odd commercial and just plain fun. In other words, we're gonna play radio!!!!

The new program is called REAL RADIO. Mr Mike, W1RC and The Timtron, WA1HLR are the show hosts.

This week's program will feature some very important news that is sure to be of great interest to everyone interested in military and government radio equipment. Also featured will be a special surprise guest. Mark your calendar and don't miss it!

We actively encourage input from you the shortwave listener. A special e-mail address has been set up to receive correspondence - RealRadio@usa.net! A .mp3 version of each program will eventually be posted to a suitable Internet Newsgroup or Web site for downloading.

See ya!

73,

MrMike, W1RC
The Timtron, WA1HLR

Hello,

Check out http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and wall wort power suppy (normally an extra cost item): $145. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. The rotor is just back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $115 or BRO.

Heath SB614 Station Monitor, clean, fully operational, well built, looks and works virtually like new. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $145, includes good copy of manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS. I'll split the shipping with you.

Thanks, and I look forward to hearing from you!

4809. GT550 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-15 00:00:00 UTC
From: Radyojo@aol.COM
Message-ID: <0.dad98b7f.253887fd@aol.com>
Source record: 77829

Joe,

In most cases, the 6JS6 will work without modification. Take a look at your GT550
to see what is connected to pin 11 on the PA socket. The 6LB6 and 6JS6 are identical except for pin 11 being connected to the screen grid on the 6JS6. During the final 5 years of building tubes, GE made several tubes with the same plate in order to cut costs. Thus, the GE 6LB6, 6JS6, 6KD6 and 8950 had the same plate and ratings.

If you need to research the past of your GT550, we have the production database that contains all the serial numbers of everything WRL/Hy-Gain built during the tube
era; so, we can tell you the exact date of manufacture and associated schematics and service bulletins.

This HT-40 seems to be completely original, all the way down to the "hallicrafters" stamping on the tubes. Very clean with no visible signs of any replacement parts. See pictures and more detailed description at http://www.knology.net/~wewilson/HT40.htm

I'd like to sell this one here, but will list on ebay if no takers by Saturday evening. Best offer over $100 (plus actual shipping cost) by Saturday 6PM EST gets it.

For auction on ebay:

Set of tube voltage test adapters - these plug into the tube socket,
then the tube plugs into them, and it brings test points for each tube
pin up above the chassis. Now you can test voltages without balancing a
chassis upside down on the bench. Picture and description at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=180926897

I've always wondered how the RA217,1217,6217 compared performance-wise
with the RA17. Being as how they are an early transistor comms RX, I've
always had a suspicion that the strong signal and intermodulation
performance would be inferior to the last generation of tube RXs.
Anyone done any comparisons?

Matching pair of NOS 20LF6 RCA Great Britain Tall-bottles, in original boxes, fully tested, unused...65.00 for the pair, including shipping in USA...

Guaranteed unless used in application that exceeds the design of the tube.
I test all my Compactrons on a Heath TT-1A

If interested, respond via Email.
Thank you,
Joe Pratt, Tubecntral@aol.com

4815. Help: Heathkit Warrior Amplifier HA-10

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-15 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38076EEF.806BFDAC@yahoo.com>
Source record: 77835
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi,
I have a heathkit HA-10 warrrior amplifier. This is the 4x811A amp that is rated
at 1KW input.

Amp works great. Even been nicely modified for low power tr switching (no high voltage
for the newer solid state stuff.

Quesiton: any ALC for this amplifier to prevent over driving and flat topping, or, should
I just watch maximum output via a scope instead?

Problem: the high voltage transformer doesn't seem to "know the words" -- you know -- it hums alot. And, the higher the output power, the louder the hum/buzz. Almost sounds like a vibration. Is this a simple "tighten the transformer down" or could I be looking for a new high voltage transformer soon?

I'm getting about 1920 volts at 114 AC volts input.

Power output is as high as 700 watts on 80 meters, down to about 620 watts on 10 meters with
100 watts of drive. 25 watts of drive gives an easy 400W pep, so think it's working OK. I guess it runs in grounded grid config.???

I actually bought this thing to work on 10M AM -- driven by an old Drake TR-4 in controlled carrier AM mode.

The amp itself is a beautiful piece of gear. Heavy duty. All copper outer chassis. Shiney
chrome knobs. 80 thru 10 meters (bet it would even work on six).

Looking for suggestions to fix the noisy transformer, and any other tips on things like making a tuned input or other ideas. Also, opinions on the cost-per-watt -- what's current going rate? . Is it a decent amp?

Thanks.
Joe

4816. What's this? A decimal counter tube?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-15 00:00:00 UTC
From: "George R. Gonzalez" <grg@umn.edu>
Message-ID: <7u7sil$83k$1@news1.tc.umn.edu>
Source record: 77836

I stumbled onto a boatanchor of a military counter, a FR-114 (144?).
About 40 lbs, 200cfm of hot air, and 1 Megahertz tops.
A good room heater.

It has these really weird digit counter modules.
Instead of the usual 4 or 5 12AU7's and a row of neons,
they have just two 5814's, a nixie,
and some fat compactron-like tube mounted inside a cylindrical magnet.

The counter works just fine on all digits, but I'm afraid to pull out
one of the funny tubes to look it over... Iif I break it,
I'm in trouble, I assume they're hard to get!

Anybody know what these are?

Regards,

George

Hello, from an estate, one unused Amperex 7378 , with new anode cap and corresponding ceramic Johnson socket, 70.00 delivered in USA.

The socket has a tiny crack in one corner, but a Ham friend says its AOK.

It is unboxed, and mounted for use..the owner died before completion of the project. Guaranteed. Also have HUGE cylindrical, almost foot-long 10 KW rated resistors from the same haul. Am not that far into it yet, but have lots more tubes and accessories from the era...

Please respond privately...

Thank you,
Joe Pratt, Tubecntral@aol.com

Sounds like a crossed-field counting tube, as used in old computing and scientific equipment. Check out http://www.wps.com/archives/decimal-tubes/index.html#CROSSED-FIELD for more details.

Hello to the list.
I have a Transceiver Holandes model
3030/GRC. with source to 220 volts,
AM/CW with filter of cw of 500 Hz.
Telefono, original leg Manipulator and
loudspeaker.
Equipment totally to valvulas, final step "807"
with BVO for excellent SSB, I can order
photos of the equipment to who this party.
I desearia to change this equipment, by a
Receiving type "Collins",Hammarlund,National,
or ' Allicrafter.
and tambien serious possible change by offers of
other type of Radio material.
And tambien I am interested in the purchase
of the accessories for the Transceiver Collins-618S-1
Accessory power suply 416w-1
oar you control unit 614-D-1 or ' D-2
oar you control unit 614C-2
and 144 crystals of the transceiver 618S-1 that I possess
the one which DOES NOT has the crystals, or in their/its/your/his defect a
generating of RF that it substitute to the crystals of said
transceiver 618S-1.
If Vd have these accessories for 618S-1
agradeceria they are put in touch with me

I don't know the piece of equipment. But, some older vacuum tube power supplies used two chokes in the design. The 'first' choke, nearest the rectifiers, is a swinging choke. The inductance value as a function of load current due to intentional non-linearity in the core design. The purpose, if I remember from college 40 years ago, is to provide a critical inductance for tube conduction. The chokes were (are) lossy by design.

I hope you get other responses that may offer more specific insight.

Is it a recent change in the chokes operating temp? It might always have been this way. It could be an indication that the hot one has some shorted windings or that a filter capacitor is leaky,causing the choke to draw too much current. Try to measure the current in the hot choke to determine if it's operating within it's design limits. Unless you have the equipment,the only sure way to diagnose it is to replace it with a known good one. Then you can learn the fine art of rewinding a choke. It's really not too hard and will prepare you for winding a power transformer some day. Good luck.

Steve:

Quite to the contrary---it has everything to do with it.

Well... I deleted a post I had wanted add to the thread concerning the utility of stuff like that based upon my travels around the world here and there---far from what many think that HF equipment isn't dead and only for boatanchor enthusiasts.

Would you like keep track of what happens to the gear that needlessly doesn't get destroyed---I mean THE GOOD STUFF, not the 390's or KWM's with the bashed main tuning dial that shows up in the hamfest. I'm sure you are well aware that the folks that get first picks of surplus equipment aren't the hamateurs. In this day and age any change in policy deserves closer scrutiny to determine the reasons why---it's only good practice.

Maybe I'm wrong and there are kind souls who want to get the gear into the hands of US amateurs just like M1 rifles are being put into the hands of qualified shooters by the Civilian Marksmanship Program http://www.odcmp.com/ in that case, by golly, thank you very much DoD officials. How do I APPLY to get some of that radio stuff? Honestly, I hope they add other items that US civilians can put to good use instead of those items ending up in a crusher or incinerator as a complete loss to the taxpayer.

OK ALREADY... '...mentioned equipment will not longer be needlessly destroyed.' I listen/read the Drudge Report and see if anything happens.

Sincerely,

I am trying to fine information on a "1942" 3 tube radio. It uses 2-UZ30s and a UZ34. I am looking for a source of information on it. It is quite small, very well made and appears to have been mounted in the airplane with rubber bands. It has all japanese lettering on the dials, tubes and components. It appears to be a small regen receiver and AM transmitter on about 21.2 mhz, but not sure. Thought this may be a good thread. Can anyone help? Thanks! Jack k8xx Traverse City, Michigan

A few months ago I participated in a thread on this group about the well known tendency of the Scout to drift or jump up to a KHZ or more in extended CW transmissions. Someone was kind enough to email to me a mod (a simple R&R of a single capacitor if I remember) that cures this problem.

Unfortunately, while upgrading my mail client, I lost the saved message. Would the person who emailed me this information please get in touch, or alternatively, if anyone else knows the correct procedure and part values, please let me know via email. Thank you very much.

The biggest problem with eBay, from the seller's point of view, is with bidder's who back out of their bids. Happens so often that (I am informed by an acquaintance who worked for eBay until early this year that for items closing at over $250 the rate of bidder default is above 30%), along with shill bidding, it is eBay's number one priority in enforcing the rules.

I think a lot of people get caught up in the excitement of an auction, and later realize that they have bid far more than the item is truly worth (i.e. what they could get it for if they had some patience and prudence) or that they are really willing to pay. I have had sellers offer me their items several times when I was the second place bidder and the "winner" backed out.

I have a BRAND NEW in the BOX, never installed SWAN TB4HA, 4 element heavy
duty triband yagi antenna.
10-15-20 meters.
The parts and construction on this antenna are truly incredible!
Remember when you saw these in the early 70's but couldn't afford it?
Well, now you can have it for only $350 + shipping.

Hi Will:

I have a good cure for ur so called drifts of freq jumps....those are freq corrections that are taking place from ur micro processor circuit going to plug #15 on ur PTO board #81647....what u need to to do is disconnect or clip the wire label lock at that 3wire plug this wire goes to varactor D1 which rcves a change in voltage for freq corrections.....I made this change in my scout and end of problem. If u dont understand what Iam talking about I have it on paper.
With that lock wire disconnected ur scout is like a normal rig without that high tech circuit for a problem that doesnt exist anyway...hi. Hope that helps.
Jack.....K8BVJ

I need a replacement tuner assembly for an AN/PRR-15 (R-1484) receiver, made by Zenith for the military in the late 1960s. The tuner was designed uniquely for this receiver and was made by JFD Electronics, part number TSLC-108B. Here is a photo:
http://users.mwci.net/~ranickel/tunertop.jpg

To give you an incentive to dig through the junkbox, I'll pay a $50.00 finders fee to anyone who can locate a working tuner for me. I realize it's a long-shot, but I got a spare film-type display readout with this receiver, which is equally unique, so who knows?

I'd also be interested in purchasing a complete receiver, or parts unit, under the same terms. Thanks for any assistance.

>I recently bought a DX-150"B" at a garage sale. How does it's
>performance differ from the '160' other than the lack of a LW band?

I'm not precisely sure, as my DX-150 is an original issue, and not a "B" model... my guess is that they are quite similar, especially if the "B" has an FET front end (this would probably be indicated on the front panel, as it is on the DX-160). The DX-160 may have just been more or less a facelift of the 150B, with the addition of the LW band being the only significant change. We'd probably have to pore over the individual circuit diagrams to note all of the differences... but apart from a product detector or an FET front end, I doubt that any differences we would see would be highly significant. I've compared my DX-150 and DX-160 side by side, not really intensively or with a room full of test equipment but at a general listening level, and the two were fairly close in terms of reception, and these two are, circuit wise, the farthest apart from one another in the line.

What's really unfortunate about these receivers is that they could have had better audio, and we would be clamouring for them as much as we do for the Panasonic "Command" series. The pedestrian audio is really the only thing that sets the GRE-built Realistic receivers apart -- I think that Tandy misunderstood the market here. Had they realized that they would be catering more to SWLs than to hams with these models (how many transmitters have you ever seen for sale at a Radio Shack anyway?), they may have given the customers more than something that sounded like someone on the other end of a telephone in terms of sound quality. A bit more "warmth" in the audio, and a bit more IF bandwidth, would not have added a significant cost to making them, I think. You knew that Panasonic was doing their homework here, simply by noting separate bass and treble controls on all of the receivers (not even one for "tone" on the Radio Shack offerings).

C.K.

I found the RA6217 to be noisy and full of images... it's performance is poor without a preselector, and even with a preselector, it's not that great. Also, you need a spectrum analyzer or sweeper to align one of the IF filters. The electrical design is interesting, though, and the mechanicals and build quality are definitely first class.

Source record: 77768

If it's a capacitor-input filter and the first capacitor goes bad, then the first
choke is going to get a bit warmer than usual due to the extra
ripple it has to handle. It's usually not enough of a change to notice,
but its possible I guess.

You might also check that the hefty audio output tubes are not drawing too
much current. Doesnt that model have two 6L6's? All it would take
is some leaky grid capacitors to really heat up the tubes and power
supply. Those outut tubes probably draw as much power as the
rest of the radio.

HAMFEST October 24, 1999 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 24, 1999

LINDENHURST, LI - NY

On October 24, 1999 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:
